  Credits: 3. Offered autumn and spring. Introduces the skills and concepts of information technology, both from practical and a more theoretical point of view. During lectures and interactive computer labs, students will explore a wide range of digital and information technologies, including common PC applications, networking, databases, privacy, and security. Credit not allowed for both CSCI 105 and CRT 111 and CS 111.

- CSCI 106 - Careers in Computer Science

  Credits: 1. Offered autumn. Exploration of various careers available in the general area of Computer Science. Includes discussion of strategies for success in the major. Computer Science faculty members also will discuss possible undergraduate research opportunities and motivation for graduate education.

- CSCI 135 - Fund of Computer Science I

  Credits: 3. Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.

- CSCI 136 - Fund of Computer Science II

  Credits: 3. Offered autumn and spring. Prereq., CSCI 135; coreq., M 115 or M 151 or consent of instr. Continuation of CSCI 135. Survey of computer science topics including recursion, algorithms, basic data structures, operating systems, artificial intelligence, graphics, user interfaces, and social and ethical implications of computing.

- CSCI 172 - Intro to Computer Modeling

  Credits: 3. Offered autumn and spring. Problem solving and data modeling using computer productivity software. Emphasis using spreadsheets and database for data analysis. Credit not allowed for CSCI 172, CRT 172, and CS 172.

- CSCI 181 - Web Design and Programming

  Credits: 3. Electronic Publishing on the World Wide Web

- CSCI 191 - Special Topics

  Credits: 0 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Students taking CS classes with computer programming components should expect to use additional computer lab time outside of class.

- CSCI 198 - Internship

  Credits: 1 TO 6. Offered intermittently. Prereq., consent of department. Extended classroom experience which provides practical application of classroom learning during placements on and off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- CSCI 205 - Programming Languages w/ C/C++

  Credits: 4. Offered spring. Prereq., CSCI 232 and M 225. Concepts and principles of programming languages with an emphasis on C, C++, and object-oriented programming. Syntax and semantics of object-oriented languages. Principles and implementation of late binding, memory allocation and de-allocation, type-checking, scope, polymorphism, inheritance.

- CSCI 216E - Technology, Ethics & Society

  Credits: 3. An examination of ethical issues related to new technologies in the context of ethical theory in the western secular tradition. Focus will be on applying central concepts, principles, and problems of ethical theory to particular areas of technology, such as artificial intelligence and robotics, social networks, nanotechnology, genetic engineering, and privacy in a digital age. Course Attributes: Ethical & Human Values Course Writing Course-Intermediate

- CSCI 232 - Data Structures and Algorithms

  Credits: 4. Offered autumn. Prereq., 'B-' or better in CSCI 136; or consent of instr. Abstract data types, algorithm analysis, stacks, queues, lists, recursion, trees, hashing, graphs, and applications of data structures in algorithm development. Python programming language used.

- CSCI 250 - Computer Mdlng/Science Majors

  Credits: 3. Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.

- CSCI 291 - Special Topics

  Credits: 1 TO 6. (R-9) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: Writing Course-Lower-Division

- CSCI 298 - Internship

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of department. Extended classroom experience which provides practical application of classroom learning during placements on and off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- CSCI 315E - Computers, Ethics, and Society

  Credits: 3. Offered autumn. Prereq., University approved intermediate level writing course. Ethical problems that computer scientists face. The codes of ethics of professional computing societies. The social implications of computers, computing, and other digital technologies. Course Attributes: Ethical & Human Values Course Writing Course-Advanced

- CSCI 323 - Software Science

  Credits: 3. Offered autumn. Prereq., CSCI 136. Study, implementation, and assessment of software processes, techniques, methods, and CASE tools. Project management and cost estimation techniques will be examined. A group project may be required.

- CSCI 332 - Design/Analysis of Algorithms

  Credits: 3. Offered spring. Prereq., CSCI 232 and M 225 or consent of instr. Algorithm design, analysis, and correctness. Commonly used algorithms including searching and sorting, string search, dynamic programming, branch and bound, graph algorithms, and parallel algorithms. Introduction to NP-complete problems.

- CSCI 340 - Database Design

  Credits: 3. Offered spring. Prereq., CSCI 232 or consent of instr. Fundamentals of data modeling, the relational mode, normal forms, file organization, index structures and SQL. Major project involving the design and implementation of a relational database.

- CSCI 361 - Computer Architecture

  Credits: 3. Offered spring. Prereq., CSCI 136 or consent of instr. Functional view of computer system components, BCPU, ALU, memory, bus, cache, I/O module. Instruction set design: formats, addressing modes. Basic circuit design. Pipelining and assembly language. Interrupt handling. Implementation of ALU and control unit. Detailed design of an RISC-like instruction set. Datapath and performance comparisons. Basic multiprocessor design.

- CSCI 390 - Research

Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student. Course Attributes: Research & Creative Schlrshp

- CSCI 391 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., junior standing. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- CSCI 394 - Seminar

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Guidance in special work.

- CSCI 398 - Internship

  Credits: 1 TO 3. (R-3) Offered intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from faculty supervisor and the Internship Services office. Only three credits applicable to computer science major or minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- CSCI 411 - Advanced Web Programming

  Credits: 3. Offered intermittently. Prereq., CSCI 136. Programming and software development techniques for developing web-based applications. Scripting and other programming languages that are used for web-based development.

- CSCI 412 - Game and Mobile App

  Credits: 3. Offered intermittently. Prereq., CSCI 232 and 323. Programming and software development techniques for developing gaming and mobile applications. Multiple gaming environments and mobile programming languages are introduced and examined to build modern applications.

- CSCI 426 - Adv Prgrmng Theory/Practice I

  Credits: 3. Offered autumn. Prereq., CSCI 205, 232, 323 and M 225, or consent of instr. Examination and implementation of modern best practices in the areas of software design, coding, testing and maintenance. Focus on design patterns and design pattern languages used to build modern software systems in a variety of areas.

- CSCI 427 - Adv Prgrmng Theory/Practice II

  Credits: 3. Offered spring. Prereq., CSCI 426. Design and implementation of a major software project in a group setting, with required documentation, presentation, installation, and approval by the instructor.

- CSCI 438 - Theory of Computation

  Credits: 3. Offered intermittently. Prereq., M 225 or M 307. This course focuses on understanding the limitations & capabilities of abstract models of computation, through rigorous mathematical analysis. Topics will include finite & pushdown automata, nondeterministic computation, regular expressions, generative grammars, Turing machines, undecidability, and computational complexity.

- CSCI 441 - Computer Graphics Programming

  Credits: 3. Offered intermittently. Prereq., CSCI 232 and M 221 or consent of instr. The graphics pipeline, its implementation in hardware and emphasis on the programmable portions of the pipeline. Matrix transformations for modeling, viewing, clipping, and windowing. Application of lighting, coloring, and texturing models. Hierarchical modeling of objects. Programmable shaders. OpenGL and WebGL.

- CSCI 443 - User Interface Design

  Credits: 3. Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to usability and key concepts of human behavior. Focus on the process of user-centered design, including requirements specification, prototyping, and methods of evaluation. Incorporation of regular design critiques of classmates' work, and emphasis on both oral and written communication skills. Credit not allowed for CSCI 543 and this course. Course Attributes: Co-Convened Course

- CSCI 444 - Data Visualization

  Credits: 3. Offered intermittently. Prereq., M 171; programming experience; and junior, senior, or graduate status; or consent of instr. Visualization fundamentals and applications using special visualization software; formulation of 3-D empirical models; translation of 3-D models into graphical displays; time sequences and pseudo-animation; interactive versus presentation techniques; special techniques for video, CD and other media.

- CSCI 446 - Artificial Intelligence

  Credits: 3. Offered intermittently. Prereq., M 225 or M 307, and CSCI 232, or consent of instr. Using computers and software to solve problems that require intelligence. Specific topics may include knowledge representation, logical and probabilistic reasoning, machine learning, planning, game playing, information retrieval, computer vision, and robotics.

- CSCI 447 - Machine Learning

  Credits: 3. Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to the framework of learning from examples, various learning algorithms such as neural networks, and generic learning principles such as inductive bias, Occam's Razor, and data mining. Credit not allowed for both CSCI 447 and CSCI 547. Course Attributes: Co-Convened Course

- CSCI 448 - Pattern Recognition

  Credits: 3. Offered intermittently. Prereq., Junior or Senior status. Introduction to the framework of unsupervised learning techniques such as clustering (agglomerative, fuzzy, graph theory based, etc.), multivariate analysis approaches (PCA, MDS, LDA, etc.), image analysis (edge detection, etc.), as well as feature selection and generation. Emphasis will be on the underlying algorithms and their implementation. Credit not allowed for both CSCI 448 and CSCI 548. Course Attributes: Co-Convened Course

- CSCI 451 - Computational Biology

  Credits: 3. Offered Autumn. Designed for attendance by both computer scientists and biologists. The course will explore the interdisciplinary nature at the juncture of the two fields. Students will be introduced to bioinformatics (emphasis: computational genomics), with exposure to fundamental problems, algorithms, and tools in the field. This includes a basic introduction to genomics, along with in-depth coverage of algorithms and methods relevant to modern computational genomics, including: biological sequence alignment, sequence database homology search, and phylogeny inference. The programming expectations are limited for a 400-level computer science course, but at least one semester of a programming-intensive course is required. Credit not allowed for CSCI 558 and this course Course Attributes: Co-Convened Course

- CSCI 460 - Operating Systems

  Credits: 3. Offered autumn. Prereq., CSCI 232, or consent of instr. Operating system design principles. Processes, threads, synchronization, deadlock, memory management, file management and file systems, protection, and security, comparison of commonly used existing operating systems, writing programs that make use of operating system services. It is recommended, but not required, that the student also attend Programming Languages (in order to be prepared to write C programs) and Architecture (in order to understand interactions between the operating system and processor hardware) prior to attending this course.

- CSCI 464 - Applications of Mining Big Data

  Credits: 3. Offered intermittently. Prereq., upper division or consent of instr. Co-convenes with CSCI 564. Introduction to existing data mining software systems and their use, with focus on practical exercises. Topics include data acquisition, data cleansing, feature selection, and data analysis. Credit not allowed for both CSCI 464 and CSCI 564. Course Attributes: Co-Convened Course

- CSCI 466 - Networks

  Credits: 3. Offered spring. Prereq., CSCI 232. Concepts and practice of computer networking, network protocol layers, switching, routing, flow, and congestion control. Network programming.

- CSCI 477 - Simulation

  Credits: 3. Co-convene with CSCI 577. Prereq., M 172, CSCI 135, or consent of instr. Matrix languages. ODE solving; Euler-Richardson, Runge-Kutta, PDE solving; finite differences, finite elements, multi-grid techniques. Discrete methods for solution, renormalization group method, critical phenomena. Emphasis on presentation of results and interactive programs. Credit not allowed for CSCI 577 and this course. Course Attributes: Co-Convened Course

- CSCI 480 - Applied Parallel Computing Techniques

  Credits: 3. Prereq., CSCI 205 and 232, or instructor consent. This course is an introduction to parallelism and parallel programming. Topics include the various forms of parallelism on modern computer hardware (e.g. SIMD vector instructions, GPUs, multiple cores, and networked clusters), with coverage of locality and latency, shared vs non-shared memory, and synchronization mechanisms (locking, atomicity, etc). We will introduce patterns that appear in essentially all programs that need to run fast. We will discuss how to recognize these patterns in a variety of practical problems, discuss efficient algorithms for implementing them, and how to compose

these patterns into larger applications. We will address computer architecture at a high level, sufficient to understand the relative costs of operations like arithmetic and data transfer. We also introduce useful tools for debugging correctness and performance of parallel programs. Assignments will include significant parallel programming projects. Co-convenes with CSCI 580. Credit not allowed for both CSCI 480 and CSCI 580. Course Attributes: Co-Convened Course

- CSCI 490 - Research

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student. Course Attributes: Research & Creative Schlrshp

- CSCI 491 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- CSCI 492 - Independent Study

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.

- CSCI 494 - Seminar

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Guidance in special work.

- CSCI 498 - Internship

  Credits: 1 TO 3. (R-3) Offered Intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from the faculty supervisor and the Internship Services office. Only three credits of CSCI 398 and/or CSCI 498 applicable to computer science major or minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- CSCI 499 - Senior Thesis/Capstone

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of thesis/project director and chair of the Computer Science Department. Senior thesis for computer science majors and/or Watkins scholars.

- CSCI 521 - IT Infrastructure

  Credits: 3. Offered infrequently. Prereq., CSCI 446 or IS 372 or consent of instr. Identification and classification of background environment, hardware, software, and service components in an enterprise IT environment; management and security concerns for each component; consideration of how the components fit together to form an enterprise information technology environment. Level: Graduate

- CSCI 531 - Desgn & Anal Algorithms

  Credits: 3. Offered intermittently. Prereq., CSCI 332. Algorithm design, analysis, and correctness, with an emphasis on more advanced techniques than covered in CS 332. Design of algorithms by induction. Recurrences and their solutions. Parallel algorithms. Complexity theory: NP-hard and NP-complete problems. Approximation algorithms for intractable problems. Level: Graduate

- CSCI 543 - Human-Computer Interaction

  Credits: 3. Offered intermittently. Prereq., CSCI 232 or consent of instr. Principles of good design for interactive systems and web-based applications. User-centered design methodology including requirements specification, low and high-fidelity prototyping, heuristic evaluation, cognitive walkthrough, predictive modeling, and usability testing. Advanced HCI research project. Credit not allowed for both CSCI 443 and CSCI 543. Level: Graduate Course Attributes: Co-Convened Course

- CSCI 547 - Machine Learning

  Credits: 3. Offered intermittently. Prereq., CSCI 232 or consent of instr. Fundamentals of machine learning including neural networks, decision trees, Bayesian learning, instance-based learning, and genetic algorithms; inductive bias, Occam's razor, and learning theory; data mining; software agents. Credit not allowed for CSCI 447 and CSCI 547. Level: Graduate Course Attributes: Co-Convened Course

- CSCI 548 - Pattern Recognition

  Credits: 3. Offered intermittently. Introduction to the framework of unsupervised learning techniques such as clustering (agglomerative, fuzzy, graph theory based, etc.), multivariate analysis approaches (PCA, MDS, LDA, etc.), image analysis (edge detection, etc.), as well as feature selection and generation. Techniques in exploratory data analysis when faced with large, multivariate

datasets. Opportunities at implementation of some algorithmic approaches as well as use of preexisting tools such as the R-project statistics package. Emphasis will be on the underlying algorithms and their implementation. Credit not allowed for both CSCI 448 and CSCI 548. Level: Graduate Course Attributes: Co-Convened Course

- CSCI 555 - Topics Artificial Intelligence

  Credits: 3. Offered intermittently. Prereq., M 225 or M 307, and CSCI 232, or consent of instr. The study and design of artificial intelligent agents. Specific topics may include knowledge representation, logical and probabilistic reasoning, machine learning, planning, game playing, information retrieval, computer vision, and robotics. Level: Graduate

- CSCI 558 - Intro to Bioinformatics

  Credits: 3. Offered autumn. Designed for attendance by both computer scientists and biologists. The course will explore the interdisciplinary nature at the juncture of the two fields. Students will be introduced to bioinformatics (emphasis: computational genomics), with exposure to fundamental problems, algorithms, and tools in the field. This includes a basic introduction to genomics, along with in-depth coverage of algorithms and methods relevant to modern computational genomics, including: biological sequence alignment, sequence database homology search, and phylogeny inference. The programming expectations are limited for a 500-level computer science course, but at least one semester of a programming-intensive course is required. A substantial project is a key component of the course. Level: Graduate Course Attributes: Co-Convened Course

- CSCI 564 - Applications of Mining Big Data

  Credits: 3. Offered intermittently. Co-convenes with CSCI 464. Introduction to existing data mining software systems and their use, with focus on practical exercises. Topics include data acquisition, data cleansing, feature selection, and data analysis. Credit not allowed for both CSCI 464 and CSCI 564. Level: Graduate Course Attributes: Co-Convened Course

- CSCI 577 - Simulation Modeling

  Credits: 3. Co-convene with CSCI 477. Prereq., M 172, CSCI 135, or consent of instr. Matrix languages. ODE solving; Euler-Richardson, Runge-Kutta, PDE solving; finite differences, finite elements, multi-grid techniques. Discrete methods for solution, renormalization group method, critical phenomena. Emphasis on presentation of results and interactive programs. Conduct, document, and present graduate level research involving computer simulation methods. Credit not allowed for CSCI 477 and this course. Level: Graduate Course Attributes: Co-Convened Course

- CSCI 580 - Parallel Computing

  Credits: 3. Offered intermittently. Prereq., CSCI 232, 205. Parallel processing architectures and programming languages. Co-convenes with CSCI 580. Credit not allowed for both CSCI 480 and CSCI 580. Level: Graduate Course Attributes: Co-Convened Course

- CSCI 594 - Graduate Seminar

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Seminar on current research topics in computer science. Level: Graduate

- CSCI 595 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offering of current topics. Level: Graduate

- CSCI 596 - Independent Study

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student. Level: Graduate Course Attributes: Independent Study

- CSCI 597 - Research

  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate

- CSCI 598 - Internship

  Credits: 1 TO 9. (R-3) Offered intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from faculty supervisor and the Internship Services office. Only three credits applicable to computer science major or minor. Level: Graduate Course Attributes: Internships/Practicums

- CSCI 599 - Thesis/Project
  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of instr. Research for and preparation of the master thesis or professional paper. Level: Graduate

Computer Science Professional B.S.

Bachelor of Science - Computer Science; Track: Professional

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 87

Required Cumulative GPA: 2.0

Computer Science Core Courses

Rule: Must complete all of the following:courses

Note: .

Note: 100-level CSCI courses other than CSCI 106, CSCI 135-136, and 200-level CSCI courses other than CSCI 205 and CSCI 232 do not count toward the degree or track requirements. However, they do count in the 60 credit limit in the major.
CSCI 315E will fulfill the upper division writing requirement.

	Course	Credits
	CSCI 106 - Careers in Computer Science Offered autumn. Exploration of various careers available in the general area of Computer Science. Includes discussion of strategies for success in the major. Computer Science faculty members also will discuss possible undergraduate research opportunities and motivation for graduate education.	1 Credits
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits
	CSCI 136 - Fund of Computer Science II Offered autumn and spring. Prereq., CSCI 135; coreq., M 115 or M 151 or consent of instr. Continuation of CSCI 135. Survey of computer science topics including recursion, algorithms, basic data structures, operating systems, artificial intelligence, graphics, user interfaces, and social and ethical implications of computing.	3 Credits
	CSCI 205 - Programming Languages w/ C/C++ Offered spring. Prereq., CSCI 232 and M 225. Concepts and principles of programming languages with an emphasis on C, C++, and object-oriented programming. Syntax and semantics of object-oriented languages. Principles and implementation of late binding, memory allocation and de-allocation, type-checking, scope, polymorphism, inheritance.	4 Credits

	CSCI 232 - Data Structures and Algorithms Offered autumn. Prereq., 'B-' or better in CSCI 136; or consent of instr. Abstract data types, algorithm analysis, stacks, queues, lists, recursion, trees, hashing, graphs, and applications of data structures in algorithm development. Python programming language used.	4 Credits
	CSCI 315E - Computers, Ethics, and Society Offered autumn. Prereq., University approved intermediate level writing course. Ethical problems that computer scientists face. The codes of ethics of professional computing societies. The social implications of computers, computing, and other digital technologies.	3 Credits
	CSCI 323 - Software Science Offered autumn. Prereq., CSCI 136. Study, implementation, and assessment of software processes, techniques, methods, and CASE tools. Project management and cost estimation techniques will be examined. A group project may be required.	3 Credits
	CSCI 332 - Design/Analysis of Algorithms Offered spring. Prereq., CSCI 232 and M 225 or consent of instr. Algorithm design, analysis, and correctness. Commonly used algorithms including searching and sorting, string search, dynamic programming, branch and bound, graph algorithms, and parallel algorithms. Introduction to NP-complete problems.	3 Credits
	CSCI 361 - Computer Architecture Offered spring. Prereq., CSCI 136 or consent of instr. Functional view of computer system components, BCPU, ALU, memory, bus, cache, I/O module. Instruction set design: formats, addressing modes. Basic circuit design. Pipelining and assembly language. Interrupt handling. Implementation of ALU and control unit. Detailed design of an RISC-like instruction set. Datapath and performance comparisons. Basic multiprocessor design.	3 Credits
	CSCI 426 - Adv Prgrmng Theory/Practice I Offered autumn. Prereq., CSCI 205, 232, 323 and M 225, or consent of instr. Examination and implementation of modern best practices in the areas of software design, coding, testing and maintenance. Focus on design patterns and design pattern languages used to build modern software systems in a variety of areas.	3 Credits
	CSCI 427 - Adv Prgrmng Theory/Practice II Offered spring. Prereq., CSCI 426. Design and implementation of a major software project in a group setting, with required documentation, presentation, installation, and approval by the instructor.	3 Credits
Minimum Required Grade: C-		33 Total Credits Required

Degree Electives

Rule: Must complete 18 credits from the following courses

Note: A total of at most 3 of the 18 credits of CS electives may be in CSCI 398 or 498.

	Course	**Credits**

	CSCI 340 - Database Design Offered spring. Prereq., CSCI 232 or consent of instr. Fundamentals of data modeling, the relational mode, normal forms, file organization, index structures and SQL. Major project involving the design and implementation of a relational database.	3 Credits
	CSCI 390 - Research (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.	1 To 6 Credits
	CSCI 391 - Special Topics (R-6) Offered intermittently. Prereq., junior standing. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	CSCI 394 - Seminar (R-6) Offered intermittently. Prereq., consent of instr. Guidance in special work.	1 To 6 Credits
	CSCI 398 - Internship (R-3) Offered intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from faculty supervisor and the Internship Services office. Only three credits applicable to computer science major or minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 3 Credits
	CSCI 411 - Advanced Web Programming Offered intermittently. Prereq., CSCI 136. Programming and software development techniques for developing web-based applications. Scripting and other programming languages that are used for web-based development.	3 Credits
	CSCI 412 - Game and Mobile App Offered intermittently. Prereq., CSCI 232 and 323. Programming and software development techniques for developing gaming and mobile applications. Multiple gaming environments and mobile programming languages are introduced and examined to build modern applications.	3 Credits
	CSCI 441 - Computer Graphics Programming Offered intermittently. Prereq., CSCI 232 and M 221 or consent of instr. The graphics pipeline, its implementation in hardware and emphasis on the programmable portions of the pipeline. Matrix transformations for modeling, viewing, clipping, and windowing. Application of lighting, coloring, and texturing models. Hierarchical modeling of objects. Programmable shaders. OpenGL and WebGL.	3 Credits
	CSCI 443 - User Interface Design Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to usability and key concepts of human behavior. Focus on the process of user-centered design, including requirements specification, prototyping, and methods of evaluation. Incorporation of regular design critiques of classmates' work, and emphasis on both oral and written communication skills. Credit not allowed for CSCI 543 and this course.	3 Credits

	CSCI 444 - Data Visualization Offered intermittently. Prereq., M 171; programming experience; and junior, senior, or graduate status; or consent of instr. Visualization fundamentals and applications using special visualization software; formulation of 3-D empirical models; translation of 3-D models into graphical displays; time sequences and pseudo-animation; interactive versus presentation techniques; special techniques for video, CD and other media.	3 Credits
	CSCI 446 - Artificial Intelligence Offered intermittently. Prereq., M 225 or M 307, and CSCI 232, or consent of instr. Using computers and software to solve problems that require intelligence. Specific topics may include knowledge representation, logical and probabilistic reasoning, machine learning, planning, game playing, information retrieval, computer vision, and robotics.	3 Credits
	CSCI 447 - Machine Learning Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to the framework of learning from examples, various learning algorithms such as neural networks, and generic learning principles such as inductive bias, Occam's Razor, and data mining. Credit not allowed for both CSCI 447 and CSCI 547.	3 Credits
	CSCI 448 - Pattern Recognition Offered intermittently. Prereq., Junior or Senior status. Introduction to the framework of unsupervised learning techniques such as clustering (agglomerative, fuzzy, graph theory based, etc.), multivariate analysis approaches (PCA, MDS, LDA, etc.), image analysis (edge detection, etc.), as well as feature selection and generation. Emphasis will be on the underlying algorithms and their implementation. Credit not allowed for both CSCI 448 and CSCI 548.	3 Credits
	CSCI 451 - Computational Biology Offered Autumn. Designed for attendance by both computer scientists and biologists. The course will explore the interdisciplinary nature at the juncture of the two fields. Students will be introduced to bioinformatics (emphasis: computational genomics), with exposure to fundamental problems, algorithms, and tools in the field. This includes a basic introduction to genomics, along with in-depth coverage of algorithms and methods relevant to modern computational genomics, including: biological sequence alignment, sequence database homology search, and phylogeny inference. The programming expectations are limited for a 400-level computer science course, but at least one semester of a programming-intensive course is required. Credit not allowed for CSCI 558 and this course	3 Credits
	CSCI 460 - Operating Systems Offered autumn. Prereq., CSCI 232, or consent of instr. Operating system design principles. Processes, threads, synchronization, deadlock, memory management, file management and file systems, protection, and security, comparison of commonly used existing operating systems, writing programs that make use of operating system services. It is recommended, but not required, that the student also attend Programming Languages (in order to be prepared to write C programs) and Architecture (in order to understand interactions between the operating system and processor hardware) prior to attending this course.	3 Credits

	CSCI 466 - Networks Offered spring. Prereq., CSCI 232. Concepts and practice of computer networking, network protocol layers, switching, routing, flow, and congestion control. Network programming.	3 Credits
	CSCI 477 - Simulation Co-convene with CSCI 577. Prereq., M 172, CSCI 135, or consent of instr. Matrix languages. ODE solving; Euler-Richardson, Runge-Kutta, PDE solving; finite differences, finite elements, multi-grid techniques. Discrete methods for solution, renormalization group method, critical phenomena. Emphasis on presentation of results and interactive programs. Credit not allowed for CSCI 577 and this course.	3 Credits
	CSCI 490 - Research (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.	1 To 6 Credits
	CSCI 491 - Special Topics (R-6) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	CSCI 494 - Seminar (R-6) Offered intermittently. Prereq., consent of instr. Guidance in special work.	1 To 6 Credits
	CSCI 498 - Internship (R-3) Offered Intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from the faculty supervisor and the Internship Services office. Only three credits of CSCI 398 and/or CSCI 498 applicable to computer science major or minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 3 Credits
	CSCI 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., consent of thesis/project director and chair of the Computer Science Department. Senior thesis for computer science majors and/or Watkins scholars.	1 To 6 Credits
Minimum Required Grade: C-		18 Total Credits Required

Communication

Rule: Must complete 1 of the following courses

	Course	**Credits**
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits

	COMX 242 - Argumentation Offered autumn and spring on the Mountain campus, offered intermittently on the Missoula College campus. Development of argumentation skills and critical judgment in decision-making and debate. Includes criticism, construction, presentation, and refutation of spoken and written arguments.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Mathematics

Rule: Take the following:

	Course	Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
	M 221 - Introduction to Linear Algebra Offered autumn and spring. Prereq., M 172 or 182. Vectors in the plane and space, systems of linear equations and Gauss–Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, vector spaces, linear transformations. Calculators and/or computers used where appropriate.	4 Credits
	M 225 - Intro to Discrete Mathematics Offered autumn. Prereq., one of M 162, 171, or 181 or consent of instr. Mathematical concepts used in computer science with an emphasis on mathematical reasoning and proof techniques. Elementary logic, sets, functions and relations, combinatorics, mathematical induction, recursion and algorithms. Mathematics majors should take M 307 instead of 225.	3 Credits
	STAT 341 - Intro to Probability and Stat Offered autumn and spring. Prereq., one of M 162, 172 or 182. Probability, probability models and simulation, random variables, density functions, special distributions, and a brief survey of estimation and hypothesis testing. Computer use integrated throughout.	3 Credits
Minimum Required Grade: C-		18 Total Credits Required

Science Core

Rule: Must complete 1 of the following subcategories of science sequences

9-10 Total Credits Required

Biology

Rule: May complete the following sequence

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
Minimum Required Grade: C-		9 Total Credits Required

Chemistry

Rule: May complete the following sequence

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics

Rule: May complete the following sequence

	Course	Credits
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Science Electives

Rule: Must complete 2 of the following courses

Note: The Biology, Chemistry, or Physics sequence chosen to fulfill the science core may not count toward the science electives requirement.
Laboratory courses must be taken in conjunction with their associated lecture course.

	Course	Credits
	ASTR 131N - Elementary Astronomy I Offered autumn. Prereq., high school algebra and geometry. An introduction to observational, historical, and planetary astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	3 Credits
	ASTR 132N - Elementary Astronomy II Offered spring. Prereq., high school algebra and geometry. An introduction to stars, stellar evolution, galaxies, and cosmology. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	3 Credits

	ASTR 134N - Elementary Astronomy Lab I Offered autumn. Prereq. or coreq., ASTR 131N Laboratory exercises in observational and planetary astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	1 Credits
	ASTR 135N - Elementary Astronomy Lab II Offered spring. Prereq. or coreq., ASTR 132N. Laboratory exercises in observational, stellar, and galactic astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	1 Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOM 250N - Microbiology for Hlth Sciences Offered spring. Infectious diseases, including concepts of virulence, resistance, prevention and control of microbial diseases in the individual and in the community. If laboratory experience is desired, the student may enroll concurrently in BIOM 251. Credit not allowed toward a major in microbiology.	3 Credits
	BIOM 251 - Microbiology Hlth Sciences Lab Offered spring. Prereq. or coreq., BIOM 250N. Observation of live microorganisms, their characteristics and activities. Experience with microbiological techniques. Credit not allowed toward a major in microbiology.	1 Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits

	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits
	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
	GEO 225 - Earth Materials Offered autumn. Prereq., GEO 101N, GEO 102N, and CHMY 121N or 141N. Study of minerals and rocks utilizing an Earth Systems approach; mineral identification and paragenesis; survey of the distribution of minerals from the interior to the surfaces of planets and the processes that led to their formation.	4 Credits
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 343 - Modern Physics Offered autumn. Prereq., one year of college physics; coreq., M 273. Includes historical background for development of modern physics and an introduction to quantum mechanics, atomic and nuclear physics. Credit not allowed for graduate degree in physics.	3 Credits

	PHSX 444 - Advanced Physics Lab Offered autumn. Prereq., PHSX 343 or equiv., PHSX 327 or equiv.; PHSX 322 suggested but not required. Advanced experiments in classical and modern physics, including optics, spectroscopy, laser science, atomic, nuclear, and particle physics, Data analysis techniques for experimental scientists. Recommended for students entering graduate school in any experimental science.	3 Credits
Minimum Required Grade: C-		6-10 Total Credits Required

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track. After completion of this track the student will be awarded a Bachelor of Science in Computer Science.

Computer Science Interdisciplinary

Bachelor of Science - Computer Science; Track: Interdisciplinary

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 87

Required Cumulative GPA: 2.0

Computer Science Core Courses

Rule: Must complete all of the following:courses

Note: .

Note: 100-level CSCI courses other than CSCI 106, CSCI 135-136, and 200-level CSCI courses other than CSCI 205 and CSCI 232 do not count toward the degree or track requirements. However, they do count in the 60 credit limit in the major.
CSCI 315E will fulfill the upper division writing requirement. CSCI 250 may be substituted for CSCI 135.

	Course	**Credits**
	CSCI 106 - Careers in Computer Science Offered autumn. Exploration of various careers available in the general area of Computer Science. Includes discussion of strategies for success in the major. Computer Science faculty members also will discuss possible undergraduate research opportunities and motivation for graduate education.	1 Credits
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits

	CSCI 136 - Fund of Computer Science II Offered autumn and spring. Prereq., CSCI 135; coreq., M 115 or M 151 or consent of instr. Continuation of CSCI 135. Survey of computer science topics including recursion, algorithms, basic data structures, operating systems, artificial intelligence, graphics, user interfaces, and social and ethical implications of computing.	3 Credits
	CSCI 205 - Programming Languages w/ C/C++ Offered spring. Prereq., CSCI 232 and M 225. Concepts and principles of programming languages with an emphasis on C, C++, and object-oriented programming. Syntax and semantics of object-oriented languages. Principles and implementation of late binding, memory allocation and de-allocation, type-checking, scope, polymorphism, inheritance.	4 Credits
	CSCI 232 - Data Structures and Algorithms Offered autumn. Prereq., 'B-' or better in CSCI 136; or consent of instr. Abstract data types, algorithm analysis, stacks, queues, lists, recursion, trees, hashing, graphs, and applications of data structures in algorithm development. Python programming language used.	4 Credits
	CSCI 315E - Computers, Ethics, and Society Offered autumn. Prereq., University approved intermediate level writing course. Ethical problems that computer scientists face. The codes of ethics of professional computing societies. The social implications of computers, computing, and other digital technologies.	3 Credits
	CSCI 323 - Software Science Offered autumn. Prereq., CSCI 136. Study, implementation, and assessment of software processes, techniques, methods, and CASE tools. Project management and cost estimation techniques will be examined. A group project may be required.	3 Credits
	CSCI 332 - Design/Analysis of Algorithms Offered spring. Prereq., CSCI 232 and M 225 or consent of instr. Algorithm design, analysis, and correctness. Commonly used algorithms including searching and sorting, string search, dynamic programming, branch and bound, graph algorithms, and parallel algorithms. Introduction to NP-complete problems.	3 Credits
	CSCI 361 - Computer Architecture Offered spring. Prereq., CSCI 136 or consent of instr. Functional view of computer system components, BCPU, ALU, memory, bus, cache, I/O module. Instruction set design: formats, addressing modes. Basic circuit design. Pipelining and assembly language. Interrupt handling. Implementation of ALU and control unit. Detailed design of an RISC-like instruction set. Datapath and performance comparisons. Basic multiprocessor design.	3 Credits
	CSCI 426 - Adv Prgrmng Theory/Practice I Offered autumn. Prereq., CSCI 205, 232, 323 and M 225, or consent of instr. Examination and implementation of modern best practices in the areas of software design, coding, testing and maintenance. Focus on design patterns and design pattern languages used to build modern software systems in a variety of areas.	3 Credits
	CSCI 427 - Adv Prgrmng Theory/Practice II Offered spring. Prereq., CSCI 426. Design and implementation of a major software project in a group setting, with required documentation, presentation, installation, and approval by the instructor.	3 Credits

Minimum Required Grade: C-	33 Total Credits Required

Degree Electives

Rule: Must complete 6 credits from the following courses

Note: A total of at most 3 of the 6 credits of CS electives may be in CSCI 398 or 498.

	Course	Credits
	CSCI 340 - Database Design Offered spring. Prereq., CSCI 232 or consent of instr. Fundamentals of data modeling, the relational mode, normal forms, file organization, index structures and SQL. Major project involving the design and implementation of a relational database.	3 Credits
	CSCI 390 - Research (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.	1 To 6 Credits
	CSCI 391 - Special Topics (R-6) Offered intermittently. Prereq., junior standing. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	CSCI 394 - Seminar (R-6) Offered intermittently. Prereq., consent of instr. Guidance in special work.	1 To 6 Credits
	CSCI 398 - Internship (R-3) Offered intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from faculty supervisor and the Internship Services office. Only three credits applicable to computer science major or minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 3 Credits
	CSCI 411 - Advanced Web Programming Offered intermittently. Prereq., CSCI 136. Programming and software development techniques for developing web-based applications. Scripting and other programming languages that are used for web-based development.	3 Credits
	CSCI 412 - Game and Mobile App Offered intermittently. Prereq., CSCI 232 and 323. Programming and software development techniques for developing gaming and mobile applications. Multiple gaming environments and mobile programming languages are introduced and examined to build modern applications.	3 Credits
	CSCI 438 - Theory of Computation Offered intermittently. Prereq., M 225 or M 307. This course focuses on understanding the limitations & capabilities of abstract models of computation, through rigorous mathematical analysis. Topics will include finite & pushdown automata, nondeterministic computation, regular expressions, generative grammars, Turing machines, undecidability, and computational complexity.	3 Credits

	CSCI 441 - Computer Graphics Programming Offered intermittently. Prereq., CSCI 232 and M 221 or consent of instr. The graphics pipeline, its implementation in hardware and emphasis on the programmable portions of the pipeline. Matrix transformations for modeling, viewing, clipping, and windowing. Application of lighting, coloring, and texturing models. Hierarchical modeling of objects. Programmable shaders. OpenGL and WebGL.	3 Credits
	CSCI 443 - User Interface Design Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to usability and key concepts of human behavior. Focus on the process of user-centered design, including requirements specification, prototyping, and methods of evaluation. Incorporation of regular design critiques of classmates' work, and emphasis on both oral and written communication skills. Credit not allowed for CSCI 543 and this course.	3 Credits
	CSCI 444 - Data Visualization Offered intermittently. Prereq., M 171; programming experience; and junior, senior, or graduate status; or consent of instr. Visualization fundamentals and applications using special visualization software; formulation of 3-D empirical models; translation of 3-D models into graphical displays; time sequences and pseudo-animation; interactive versus presentation techniques; special techniques for video, CD and other media.	3 Credits
	CSCI 446 - Artificial Intelligence Offered intermittently. Prereq., M 225 or M 307, and CSCI 232, or consent of instr. Using computers and software to solve problems that require intelligence. Specific topics may include knowledge representation, logical and probabilistic reasoning, machine learning, planning, game playing, information retrieval, computer vision, and robotics.	3 Credits
	CSCI 447 - Machine Learning Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to the framework of learning from examples, various learning algorithms such as neural networks, and generic learning principles such as inductive bias, Occam's Razor, and data mining. Credit not allowed for both CSCI 447 and CSCI 547.	3 Credits
	CSCI 448 - Pattern Recognition Offered intermittently. Prereq., Junior or Senior status. Introduction to the framework of unsupervised learning techniques such as clustering (agglomerative, fuzzy, graph theory based, etc.), multivariate analysis approaches (PCA, MDS, LDA, etc.), image analysis (edge detection, etc.), as well as feature selection and generation. Emphasis will be on the underlying algorithms and their implementation. Credit not allowed for both CSCI 448 and CSCI 548.	3 Credits

	CSCI 451 - Computational Biology Offered Autumn. Designed for attendance by both computer scientists and biologists. The course will explore the interdisciplinary nature at the juncture of the two fields. Students will be introduced to bioinformatics (emphasis: computational genomics), with exposure to fundamental problems, algorithms, and tools in the field. This includes a basic introduction to genomics, along with in-depth coverage of algorithms and methods relevant to modern computational genomics, including: biological sequence alignment, sequence database homology search, and phylogeny inference. The programming expectations are limited for a 400-level computer science course, but at least one semester of a programming-intensive course is required. Credit not allowed for CSCI 558 and this course	3 Credits
	CSCI 460 - Operating Systems Offered autumn. Prereq., CSCI 232, or consent of instr. Operating system design principles. Processes, threads, synchronization, deadlock, memory management, file management and file systems, protection, and security, comparison of commonly used existing operating systems, writing programs that make use of operating system services. It is recommended, but not required, that the student also attend Programming Languages (in order to be prepared to write C programs) and Architecture (in order to understand interactions between the operating system and processor hardware) prior to attending this course.	3 Credits
	CSCI 466 - Networks Offered spring. Prereq., CSCI 232. Concepts and practice of computer networking, network protocol layers, switching, routing, flow, and congestion control. Network programming.	3 Credits
	CSCI 477 - Simulation Co-convene with CSCI 577. Prereq., M 172, CSCI 135, or consent of instr. Matrix languages. ODE solving; Euler-Richardson, Runge-Kutta, PDE solving; finite differences, finite elements, multi-grid techniques. Discrete methods for solution, renormalization group method, critical phenomena. Emphasis on presentation of results and interactive programs. Credit not allowed for CSCI 577 and this course.	3 Credits
	CSCI 490 - Research (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.	1 To 6 Credits
	CSCI 491 - Special Topics (R-6) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	CSCI 494 - Seminar (R-6) Offered intermittently. Prereq., consent of instr. Guidance in special work.	1 To 6 Credits

	CSCI 498 - Internship (R-3) Offered Intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from the faculty supervisor and the Internship Services office. Only three credits of CSCI 398 and/or CSCI 498 applicable to computer science major or minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 3 Credits
	CSCI 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., consent of thesis/project director and chair of the Computer Science Department. Senior thesis for computer science majors and/or Watkins scholars.	1 To 6 Credits
Minimum Required Grade: C-		6 Total Credits Required

Interdisciplinary Electives

Rule: Must complete 12 credits numbered 200 or above in a field other than Computer Science

Note: Student must complete all the requirements for a minor or additional major in any field other than Computer Science.

Minimum Required Grade: C-

12 Total Credits Required

Communication

Rule: Must complete 1 of the following courses

	Course	**Credits**
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	COMX 242 - Argumentation Offered autumn and spring on the Mountain campus, offered intermittently on the Missoula College campus. Development of argumentation skills and critical judgment in decision-making and debate. Includes criticism, construction, presentation, and refutation of spoken and written arguments.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Mathematics

Rule: Take the following:

	Course	**Credits**

	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
	M 221 - Introduction to Linear Algebra Offered autumn and spring. Prereq., M 172 or 182. Vectors in the plane and space, systems of linear equations and Gauss–Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, vector spaces, linear transformations. Calculators and/or computers used where appropriate.	4 Credits
	M 225 - Intro to Discrete Mathematics Offered autumn. Prereq., one of M 162, 171, or 181 or consent of instr. Mathematical concepts used in computer science with an emphasis on mathematical reasoning and proof techniques. Elementary logic, sets, functions and relations, combinatorics, mathematical induction, recursion and algorithms. Mathematics majors should take M 307 instead of 225.	3 Credits
	STAT 341 - Intro to Probability and Stat Offered autumn and spring. Prereq., one of M 162, 172 or 182. Probability, probability models and simulation, random variables, density functions, special distributions, and a brief survey of estimation and hypothesis testing. Computer use integrated throughout.	3 Credits
Minimum Required Grade: C-		18 Total Credits Required

Science Core

Rule: Must complete 1 of the following subcategories of science sequences

9-10 Total Credits Required

Biology

Rule: May complete the following sequence

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits

	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
Minimum Required Grade: C-		9 Total Credits Required

Chemistry

Rule: May complete the following sequence

	Course	**Credits**
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics

Rule: May complete the following sequence

	Course	**Credits**
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits

	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Science Electives

Rule: Must complete 2 of the following courses

Note: The Biology, Chemistry, or Physics sequence chosen to fulfill the science core may not count toward the science electives requirement.
Laboratory courses must be taken in conjunction with their associated lecture course.
A total of 17-18 credits of science is required from the science core plus the science electives.

	Course	Credits
	ASTR 131N - Elementary Astronomy I Offered autumn. Prereq., high school algebra and geometry. An introduction to observational, historical, and planetary astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	3 Credits
	ASTR 132N - Elementary Astronomy II Offered spring. Prereq., high school algebra and geometry. An introduction to stars, stellar evolution, galaxies, and cosmology. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	3 Credits
	ASTR 134N - Elementary Astronomy Lab I Offered autumn. Prereq. or coreq., ASTR 131N Laboratory exercises in observational and planetary astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	1 Credits
	ASTR 135N - Elementary Astronomy Lab II Offered spring. Prereq. or coreq., ASTR 132N. Laboratory exercises in observational, stellar, and galactic astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	1 Credits

	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOM 250N - Microbiology for Hlth Sciences Offered spring. Infectious diseases, including concepts of virulence, resistance, prevention and control of microbial diseases in the individual and in the community. If laboratory experience is desired, the student may enroll concurrently in BIOM 251. Credit not allowed toward a major in microbiology.	3 Credits
	BIOM 251 - Microbiology Hlth Sciences Lab Offered spring. Prereq. or coreq., BIOM 250N. Observation of live microorganisms, their characteristics and activities. Experience with microbiological techniques. Credit not allowed toward a major in microbiology.	1 Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits

	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
	GEO 225 - Earth Materials Offered autumn. Prereq., GEO 101N, GEO 102N, and CHMY 121N or 141N. Study of minerals and rocks utilizing an Earth Systems approach; mineral identification and paragenesis; survey of the distribution of minerals from the interior to the surfaces of planets and the processes that led to their formation.	4 Credits
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 343 - Modern Physics Offered autumn. Prereq., one year of college physics; coreq., M 273. Includes historical background for development of modern physics and an introduction to quantum mechanics, atomic and nuclear physics. Credit not allowed for graduate degree in physics.	3 Credits
Minimum Required Grade: C-		6-10 Total Credits Required

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track. After completion of this track the student will be awarded a Bachelor of Science in Computer Science.

Computer Science-Mathematical Sciences (Combined Major)

The purpose of the combined program is to provide a thorough background in both allied disciplines and to inculcate a deeper understanding of their goals and methods. A student must complete 60 credits in the two disciplines: 30 of these credits in Computer Science courses and 30 of these credits in Mathematical Sciences courses. Each student plans a program in consultation with a Computer Science and a Mathematical Sciences advisor. Students planning to attend graduate school in computer science or the mathematical sciences should consult with their respective advisors.

Bachelor of Science - Computer Sci-Mathematical Sci

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 73

Required Cumulative GPA: 2.0

Note: null

Mathematical Sciences

Rule: Complete the following subcategories.

31 Total Credits Required

Mathematical Sciences Core

Rule: Complete all of the following courses.

Note: The following substitutions are allowed: M 181 for M 171, M 182 for M 172, and M 225 for M 307.

	Course	Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
	M 221 - Introduction to Linear Algebra Offered autumn and spring. Prereq., M 172 or 182. Vectors in the plane and space, systems of linear equations and Gauss–Jordan elimination, matrices, determinants, eigenvalues and eigenvectors, vector spaces, linear transformations. Calculators and/or computers used where appropriate.	4 Credits
	M 273 - Multivariable Calculus Offered autumn and spring. Prereq., M 172 or 182. Calculus of functions of several variables; differentiation and elementary integration. Vectors in the plane and space.	4 Credits

	M 307 - Intro to Abstract Mathematics Offered autumn and spring. Prereq., M 172 or 182. Designed to prepare students for upper–division proof–based mathematics courses. Topics include proof techniques, logic, sets, relations, functions and axiomatic methods. Students planning to take both M 221 and 307 are encouraged to take M 221 first.	3 Credits
Minimum Required Grade: C-		19 Total Credits Required

Mathematical Sciences Electives

Rule: Complete 12 credits from the following courses.

Note: The combined nine credits of Computer Science Electives and twelve credits of Mathematical Sciences Electives must include at least three 3– or 4–credit courses numbered 400 or above, with at least one chosen from each department (not including M 429 and STAT 451, 452).

	Course	**Credits**
	-	
	M 311 - Ordinary Diff Equations/System Offered autumn. Prereq., M 273. Ordinary differential equations. Systems of linear differential equations from a matrix viewpoint. Series solutions. Existence and uniqueness for initial value problems. Numerical methods. Stability and selected topics. M 317 computer lab recommended.	3 Credits
	M 325 - Discrete Mathematics Offered spring. Prereq., M 171 and 225 or 307. Continuation of 225 and topics from graph theory, Boolean algebras, automata theory, coding theory, computability and formal languages.	3 Credits
	M 326 - Number Theory Offered spring. Prereq., M 225 or 307. Congruences, Diophantine equations, properties of primes, quadratic residues, continued fractions, algebraic numbers.	3 Credits
	M 361 - Discrete Optimization Offered spring. Prereq., one of M 162, 172 or 182 (221 or 225 recommended). Intended for non–mathematics majors as well as mathematics majors. Introduction to discrete optimization and modeling techniques with applications. Topics from combinatorics and graph theory, including enumeration, graph algorithms, matching problems and networks.	3 Credits
	M 362 - Linear Optimization Offered autumn. Prereq., one of M 162, 172 or 182 (221 recommended). Coreq., M 363 recommended. Intended for non–mathematics majors as well as majors. Introduction to linear programming and modeling techniques with applications. Topics include the simplex method, duality, sensitivity analysis and network models.	3 Credits
	M 381 - Advanced Calculus I Offered autumn . Prereq., M 307. Rigorous development of single-variable calculus with formal proof. Functions, sequences, limits, continuity, differentiation, and integration.	3 Credits

	M 412 - Partial Differential Equations Offered spring. Prereq., M 311. Fourier series, Sturm–Liouville and boundary value problems. Partial differential equations: Cauchy problems and the method of characteristics, separation of variables and Laplace transform methods. Numerical methods and selected topics. M 418 computer lab recommended. Level: Undergraduate-Graduate	3 Credits
	M 414 - Deterministic Models Offered spring. Prereq., M 263 or 311 or consent of instr. Linear and nonlinear difference and differential equations: stability, phase–plane analysis, oscillatory behavior, limit cycles, and chaos. Eigenvalues and eigenfunctions. Emphasis on models in biology. Level: Undergraduate-Graduate	3 Credits
	M 429 - History of Mathematics Offered spring. Prereq., M307. Historical study of the development of mathematics from the Egyptian and Babylonian eras to the 20th century. Level: Undergraduate-Graduate	3 Credits
	M 431 - Abstract Algebra I Offered autumn. Prereq., M 221 and 307 or consent of instr. An introduction to modern ideas of algebra through the study of groups, rings, and fields. Level: Undergraduate-Graduate	4 Credits
	M 432 - Abstract Algebra II Offered spring. Prereq., M 431. Continues the investigation of groups, rings, and fields begun in M 431. Further topics include vector spaces and field extensions. Level: Undergraduate-Graduate	4 Credits
	M 439 - Euclidean & Non-Euclidean Geo Offered autumn. Prereq., M 307. Euclidean geometry from a rigorous, axiomatic viewpoint and Non–Euclidean geometries chosen from Lobachevskian, projective, finite and Riemannian. Level: Undergraduate-Graduate	3 Credits
	M 440 - Numerical Analysis Offered intermittently. Prereq., 311, one computer language. Error analysis; approximation and interpolation, numerical solution of linear and non-linear equations, numerical integration of ordinary and partial differential equations. Level: Undergraduate-Graduate	4 Credits
	M 445 - Stat/Math/Comp Modeling Offered autumn odd-numbered years. Prereq., consent of instr. An interdisciplinary course on the integration of statistical and dynamical models with applications to biological problems. Linear and nonlinear models, estimation, systems of ordinary differential equations, numerical integration, bootstrapping, MCMC methods. Intended both for students in mathematics and the natural sciences. Level: Undergraduate-Graduate	4 Credits

	M 461 - Practical Big Data Analytics Offered autumn. Prereq., STAT 341, and one of M 221 or M 273, or consent of instructor. This is a methods course supporting the Big Data Certificate Program. The course provides the students with the essential tools for the analysis of big data. The content consists of map reduce and canonical information methods for analyzing massively large data sets, windowing methods for the analysis of streaming data, an introduction to predictive analytics, and an introduction to data visualization methods. Level: Undergraduate-Graduate	3 Credits
	M 462 - Theoretical Big Data Analytics Offered spring. Prereq., M 221 and two other Mathematics / Statistics classes at the 200-level or above, or consent of instr. The main goal of this course is to provide students with a unique opportunity to acquire conceptual knowledge and theoretical background behind mathematical tools applicable to Big Data Analytics and Real Time Computations. Specific challenges of Big Data Analytics, e.g., problems of extracting, unifying, updating, and merging information, and processing of highly parallel and distributed data, will be reviewed. The tools for Big Data Analytics, such as regression analysis, linear estimation, calibration problems, real time processing of incoming (potentially infinite) data, will be studied in more detail. It will be shown how these approaches can be transformed to conform to the Big Data demands. Level: Undergraduate-Graduate	3 Credits
	M 472 - Intro to Complex Analysis Offered spring. Prereq., M 273, M 307. Analytic functions, complex integration, singularities and application to contour integration, harmonic functions, spaces of analytic functions. Level: Undergraduate-Graduate	4 Credits
	M 473 - Introduction to Real Analysis Offered autumn odd-numbered years. Prereq., M 273, M 307. Theory of metric spaces and point set topology, Riemann-Stieltjes integral, sequences and series of functions. Stone-Weierstrass theorem, theorem of Arzela-Ascoli, introduction to Lebesgue integration. Level: Undergraduate-Graduate	4 Credits
	M 485 - Graph Theory Offered autumn. Prereq., M 325, or M 307 and M 361, or consent of instr. Theory and applications of graphs. Topics chosen from trees, matchings, connectivity, coloring, planarity, Ramsey theory, random graphs, combinatorial designs and matroid theory. Level: Undergraduate-Graduate	3 Credits
	STAT 341 - Intro to Probability and Stat Offered autumn and spring. Prereq., one of M 162, 172 or 182. Probability, probability models and simulation, random variables, density functions, special distributions, and a brief survey of estimation and hypothesis testing. Computer use integrated throughout.	3 Credits
	STAT 421 - Probability Theory Offered autumn. Prereq., M 273 or consent of instructor (STAT 341 recommended). An introduction to probability, random variables and their probability distributions, estimation and hypothesis testing. This course is the foundation on which more advanced statistics courses build. Level: Undergraduate-Graduate	3 Credits

	STAT 422 - Mathematical Statistics Offered spring. Prereq., STAT 421. Continuation of 421. Level: Undergraduate-Graduate	3 Credits
	STAT 451 - Statistical Methods I Offered autumn. Prereq., one year of college mathematics including M 115 or equiv. course in probability or consent of instr. May not be counted toward a major in mathematics. Intended primarily for non-mathematics majors who will be analyzing data. Graphical and numerical summaries of data, elementary sampling, designing experiments, probability as a model for random phenomena and as a tool for making statistical inferences, random variables, basic ideas of inference and hypothesis testing. Level: Undergraduate-Graduate	3 Credits
	STAT 452 - Statistical Methods II Offered spring. Prereq., STAT 451. Continuation of STAT 451. May not be counted toward a major in mathematics. Multiple regression, experimental design, analysis of variance, other statistical models. Level: Undergraduate-Graduate	3 Credits
Minimum Required Grade: C-		12 Total Credits Required

Computer Science

Rule: Complete the following subcategories.

30 Total Credits Required

Computer Science Core

Rule: Complete all of the following courses.

	Course	Credits
	CSCI 106 - Careers in Computer Science Offered autumn. Exploration of various careers available in the general area of Computer Science. Includes discussion of strategies for success in the major. Computer Science faculty members also will discuss possible undergraduate research opportunities and motivation for graduate education.	1 Credits
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits

	CSCI 136 - Fund of Computer Science II Offered autumn and spring. Prereq., CSCI 135; coreq., M 115 or M 151 or consent of instr. Continuation of CSCI 135. Survey of computer science topics including recursion, algorithms, basic data structures, operating systems, artificial intelligence, graphics, user interfaces, and social and ethical implications of computing.	3 Credits
	CSCI 205 - Programming Languages w/ C/C++ Offered spring. Prereq., CSCI 232 and M 225. Concepts and principles of programming languages with an emphasis on C, C++, and object-oriented programming. Syntax and semantics of object-oriented languages. Principles and implementation of late binding, memory allocation and de-allocation, type-checking, scope, polymorphism, inheritance.	4 Credits
	CSCI 232 - Data Structures and Algorithms Offered autumn. Prereq., 'B-' or better in CSCI 136; or consent of instr. Abstract data types, algorithm analysis, stacks, queues, lists, recursion, trees, hashing, graphs, and applications of data structures in algorithm development. Python programming language used.	4 Credits
	CSCI 332 - Design/Analysis of Algorithms Offered spring. Prereq., CSCI 232 and M 225 or consent of instr. Algorithm design, analysis, and correctness. Commonly used algorithms including searching and sorting, string search, dynamic programming, branch and bound, graph algorithms, and parallel algorithms. Introduction to NP-complete problems.	3 Credits
	CSCI 361 - Computer Architecture Offered spring. Prereq., CSCI 136 or consent of instr. Functional view of computer system components, BCPU, ALU, memory, bus, cache, I/O module. Instruction set design: formats, addressing modes. Basic circuit design. Pipelining and assembly language. Interrupt handling. Implementation of ALU and control unit. Detailed design of an RISC-like instruction set. Datapath and performance comparisons. Basic multiprocessor design.	3 Credits
Minimum Required Grade: C-		21 Total Credits Required

Computer Science Electives

Rule: Complete 9 credits from the following courses.

Note: (1) A total of at most three of the nine credits of Computer Science Electives may be in CSCI 398 or 498.
(2) The combined nine credits of Computer Science Electives and twelve credits of Mathematical Sciences Electives must include at least three 3– or 4–credit courses numbered 400 or above, with at least one chosen from each department (not including M 429 and STAT 451, 452).

	Course	**Credits**

	CSCI 315E - Computers, Ethics, and Society Offered autumn. Prereq., University approved intermediate level writing course. Ethical problems that computer scientists face. The codes of ethics of professional computing societies. The social implications of computers, computing, and other digital technologies.	3 Credits
	CSCI 323 - Software Science Offered autumn. Prereq., CSCI 136. Study, implementation, and assessment of software processes, techniques, methods, and CASE tools. Project management and cost estimation techniques will be examined. A group project may be required.	3 Credits
	CSCI 340 - Database Design Offered spring. Prereq., CSCI 232 or consent of instr. Fundamentals of data modeling, the relational mode, normal forms, file organization, index structures and SQL. Major project involving the design and implementation of a relational database.	3 Credits
	CSCI 390 - Research (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.	1 To 6 Credits
	CSCI 391 - Special Topics (R-6) Offered intermittently. Prereq., junior standing. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	CSCI 394 - Seminar (R-6) Offered intermittently. Prereq., consent of instr. Guidance in special work.	1 To 6 Credits
	CSCI 398 - Internship (R-3) Offered intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from faculty supervisor and the Internship Services office. Only three credits applicable to computer science major or minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 3 Credits
	CSCI 411 - Advanced Web Programming Offered intermittently. Prereq., CSCI 136. Programming and software development techniques for developing web-based applications. Scripting and other programming languages that are used for web-based development.	3 Credits
	CSCI 412 - Game and Mobile App Offered intermittently. Prereq., CSCI 232 and 323. Programming and software development techniques for developing gaming and mobile applications. Multiple gaming environments and mobile programming languages are introduced and examined to build modern applications.	3 Credits

	CSCI 426 - Adv Prgrmng Theory/Practice I Offered autumn. Prereq., CSCI 205, 232, 323 and M 225, or consent of instr. Examination and implementation of modern best practices in the areas of software design, coding, testing and maintenance. Focus on design patterns and design pattern languages used to build modern software systems in a variety of areas.	3 Credits
	CSCI 427 - Adv Prgrmng Theory/Practice II Offered spring. Prereq., CSCI 426. Design and implementation of a major software project in a group setting, with required documentation, presentation, installation, and approval by the instructor.	3 Credits
	CSCI 438 - Theory of Computation Offered intermittently. Prereq., M 225 or M 307. This course focuses on understanding the limitations & capabilities of abstract models of computation, through rigorous mathematical analysis. Topics will include finite & pushdown automata, nondeterministic computation, regular expressions, generative grammars, Turing machines, undecidability, and computational complexity.	3 Credits
	CSCI 441 - Computer Graphics Programming Offered intermittently. Prereq., CSCI 232 and M 221 or consent of instr. The graphics pipeline, its implementation in hardware and emphasis on the programmable portions of the pipeline. Matrix transformations for modeling, viewing, clipping, and windowing. Application of lighting, coloring, and texturing models. Hierarchical modeling of objects. Programmable shaders. OpenGL and WebGL.	3 Credits
	CSCI 443 - User Interface Design Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to usability and key concepts of human behavior. Focus on the process of user-centered design, including requirements specification, prototyping, and methods of evaluation. Incorporation of regular design critiques of classmates' work, and emphasis on both oral and written communication skills. Credit not allowed for CSCI 543 and this course.	3 Credits
	CSCI 444 - Data Visualization Offered intermittently. Prereq., M 171; programming experience; and junior, senior, or graduate status; or consent of instr. Visualization fundamentals and applications using special visualization software; formulation of 3-D empirical models; translation of 3-D models into graphical displays; time sequences and pseudo-animation; interactive versus presentation techniques; special techniques for video, CD and other media.	3 Credits
	CSCI 446 - Artificial Intelligence Offered intermittently. Prereq., M 225 or M 307, and CSCI 232, or consent of instr. Using computers and software to solve problems that require intelligence. Specific topics may include knowledge representation, logical and probabilistic reasoning, machine learning, planning, game playing, information retrieval, computer vision, and robotics.	3 Credits

	CSCI 447 - Machine Learning Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to the framework of learning from examples, various learning algorithms such as neural networks, and generic learning principles such as inductive bias, Occam's Razor, and data mining. Credit not allowed for both CSCI 447 and CSCI 547.	3 Credits
	CSCI 448 - Pattern Recognition Offered intermittently. Prereq., Junior or Senior status. Introduction to the framework of unsupervised learning techniques such as clustering (agglomerative, fuzzy, graph theory based, etc.), multivariate analysis approaches (PCA, MDS, LDA, etc.), image analysis (edge detection, etc.), as well as feature selection and generation. Emphasis will be on the underlying algorithms and their implementation. Credit not allowed for both CSCI 448 and CSCI 548.	3 Credits
	CSCI 451 - Computational Biology Offered Autumn. Designed for attendance by both computer scientists and biologists. The course will explore the interdisciplinary nature at the juncture of the two fields. Students will be introduced to bioinformatics (emphasis: computational genomics), with exposure to fundamental problems, algorithms, and tools in the field. This includes a basic introduction to genomics, along with in-depth coverage of algorithms and methods relevant to modern computational genomics, including: biological sequence alignment, sequence database homology search, and phylogeny inference. The programming expectations are limited for a 400-level computer science course, but at least one semester of a programming-intensive course is required. Credit not allowed for CSCI 558 and this course	3 Credits
	CSCI 460 - Operating Systems Offered autumn. Prereq., CSCI 232, or consent of instr. Operating system design principles. Processes, threads, synchronization, deadlock, memory management, file management and file systems, protection, and security, comparison of commonly used existing operating systems, writing programs that make use of operating system services. It is recommended, but not required, that the student also attend Programming Languages (in order to be prepared to write C programs) and Architecture (in order to understand interactions between the operating system and processor hardware) prior to attending this course.	3 Credits
	CSCI 464 - Applications Mining Big Data Offered intermittently. Prereq., upper division or consent of instr. Co-convenes with CSCI 564. Introduction to existing data mining software systems and their use, with focus on practical exercises. Topics include data acquisition, data cleansing, feature selection, and data analysis. Credit not allowed for both CSCI 464 and CSCI 564.	3 Credits
	CSCI 466 - Networks Offered spring. Prereq., CSCI 232. Concepts and practice of computer networking, network protocol layers, switching, routing, flow, and congestion control. Network programming.	3 Credits

	CSCI 477 - Simulation Co-convene with CSCI 577. Prereq., M 172, CSCI 135, or consent of instr. Matrix languages. ODE solving; Euler-Richardson, Runge-Kutta, PDE solving; finite differences, finite elements, multi-grid techniques. Discrete methods for solution, renormalization group method, critical phenomena. Emphasis on presentation of results and interactive programs. Credit not allowed for CSCI 577 and this course.	3 Credits
	CSCI 480 - Parallel Computing Prereq., CSCI 205 and 232, or instructor consent. This course is an introduction to parallelism and parallel programming. Topics include the various forms of parallelism on modern computer hardware (e.g. SIMD vector instructions, GPUs, multiple cores, and networked clusters), with coverage of locality and latency, shared vs non-shared memory, and synchronization mechanisms (locking, atomicity, etc). We will introduce patterns that appear in essentially all programs that need to run fast. We will discuss how to recognize these patterns in a variety of practical problems, discuss efficient algorithms for implementing them, and how to compose these patterns into larger applications. We will address computer architecture at a high level, sufficient to understand the relative costs of operations like arithmetic and data transfer. We also introduce useful tools for debugging correctness and performance of parallel programs. Assignments will include significant parallel programming projects. Co-convenes with CSCI 580. Credit not allowed for both CSCI 480 and CSCI 580.	3 Credits
	CSCI 490 - Research (R-6) Offered intermittently. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.	1 To 6 Credits
	CSCI 491 - Special Topics (R-6) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	CSCI 494 - Seminar (R-6) Offered intermittently. Prereq., consent of instr. Guidance in special work.	1 To 6 Credits
	CSCI 498 - Internship (R-3) Offered Intermittently. Prereq., consent of department. Business or government internship. Prior approval must be obtained from the faculty supervisor and the Internship Services office. Only three credits of CSCI 398 and/or CSCI 498 applicable to computer science major or minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 3 Credits
	CSCI 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., consent of thesis/project director and chair of the Computer Science Department. Senior thesis for computer science majors and/or Watkins scholars.	1 To 6 Credits

Minimum Required Grade: C-	9 Total Credits Required

Science Requirement

Rule: Complete the course work from 1 of the following subcategories.

9-10 Total Credits Required

Biology

Rule: If you choose biology, complete all of the following courses.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
Minimum Required Grade: C-		9 Total Credits Required

Chemistry

Rule: If you choose chemistry, complete all of the following courses.

	Course	Credits

	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics

Rule: If you choose physics, complete all of the following courses.

	Course	Credits
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Public Speaking Requirement

Rule: Complete 1 of the following courses.

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	COMX 242 - Argumentation Offered autumn and spring on the Mountain campus, offered intermittently on the Missoula College campus. Development of argumentation skills and critical judgment in decision-making and debate. Includes criticism, construction, presentation, and refutation of spoken and written arguments.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Advanced College Writing Requirement

Rule: Complete 1 of the following courses.

Note: Any other approved Advanced College Writing course will also fulfill this requirement.

	Course	Credits
	CSCI 315E - Computers, Ethics, and Society Offered autumn. Prereq., University approved intermediate level writing course. Ethical problems that computer scientists face. The codes of ethics of professional computing societies. The social implications of computers, computing, and other digital technologies.	3 Credits
	CSCI 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., consent of thesis/project director and chair of the Computer Science Department. Senior thesis for computer science majors and/or Watkins scholars.	1 To 6 Credits
	M 429 - History of Mathematics Offered spring. Prereq., M307. Historical study of the development of mathematics from the Egyptian and Babylonian eras to the 20th century. Level: Undergraduate-Graduate	3 Credits
	M 499 - Senior Thesis (R–12) Offered autumn and spring. Prereq., consent of instr. Senior thesis for mathematics majors and/or Watkins Scholars.	1 To 12 Credits
Minimum Required Grade: C-		3 Total Credits Required

Suggested Curricula

Note: Students are encouraged to choose their Computer Science and Mathematical Sciences Electives according to one of the following curricula; these tracks are suggestions only and, as such, optional. Note that the suggested curricula do not include an advanced College Writing Course.

Applied Math–Scientific Programming: M 311, 412, 414, and one course chosen from M 381, 440, 472, 473 and STAT 341. Three courses chosen from CSCI 441, 444, 460, 477.

Combinatorics and Optimization–Artificial Intelligence: M 361, 362, and two courses chosen from M 325, 414, 485 and STAT 341; and CSCI 446, 447, and 460.

Data Science (Big Data Analytics): M 461, 462, and STAT 341, 451, and 452. Three courses chosen from CSCI 444, 447, 448, 464, and 480

Statistics–Machine Learning: STAT 341, 421, and two courses chosen from M 325, 362, 485 and STAT 422. Three courses chosen from CSCI 340, 444, 446, 447, and 451.

Algebra–Analysis: M 381, 431, and two courses chosen from M 326, 432, 472, 473; CSCI 426, 460, and one other course.

Computer Science Minor

Minor - Computer Science (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 21

Required Cumulative GPA: 2.0

Note: The traditional minor in computer science emphasizes computer programming and related skills.

Computer Science Courses

Rule: Must complete the following subcategories

Minimum Required Grade: C-

18 Total Credits Required

Fundamentals

Rule: Must complete all of the following courses

	Course	Credits
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits
	CSCI 136 - Fund of Computer Science II Offered autumn and spring. Prereq., CSCI 135; coreq., M 115 or M 151 or consent of instr. Continuation of CSCI 135. Survey of computer science topics including recursion, algorithms, basic data structures, operating systems, artificial intelligence, graphics, user interfaces, and social and ethical implications of computing.	3 Credits
		6 Total Credits Required

Minor Electives

Rule: Must complete 12 credits of electives

Note: In addition to the six credits of Fundamentals, students must select 12 credits of electives chosen from CS 181, CSCI 100, 250, 232, 205, 361 and courses numbered 300 and above with the restrictions: both CSCI 100 and 250 cannot be counted, and at least 6 credits of electives must be at the 300 level or above.

Minor - Computer Applications (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 21

Required Cumulative GPA: 2.0

Note: The minor in computer applications emphasizes use of applications such as programming languages, word processors, spreadsheets, and data bases in the management and manipulation of electronic information.

Computer Science Fundamentals

Rule: Take 1 or both of the following courses

	Course	Credits
	CSCI 100 - Intro to Programming Offered autumn and spring. This course covers basic programming concepts such as variables, data types, iteration, flow of control, input/output, functions, and objects. The course will also cover programming ideas such as data structures, algorithms, modularity, and debugging. Students will learn about the role computation can play in solving problems by writing interesting programs to solve useful goals. No prior programming experience is expected. (Two hours independent lab per week.) Credit not allowed for both CSCI 100 and CSCI 110.	3 Credits
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits
Minimum Required Grade: C-		3-6 Total Credits Required

Computer Science Electives

Rule: Complete at least 1 and no more than 3 of the following courses

	Course	Credits
	CAPP 171 - Communicating via Computers Offered intermittently. Prereq., previous computer experience or consent of instr. The use of the computer for information presentation and communication; emphasis placed on the use of electronic resources for the access, management, and presentation of information. Students taking CS classes with computer programming components should expect to use additional computer lab time outside of class.	3 Credits

	CSCI 105 - Computer Fluency Offered autumn and spring. Introduces the skills and concepts of information technology, both from practical and a more theoretical point of view. During lectures and interactive computer labs, students will explore a wide range of digital and information technologies, including common PC applications, networking, databases, privacy, and security. Credit not allowed for both CSCI 105 and CRT 111 and CS 111.	3 Credits
	CSCI 172 - Intro to Computer Modeling Offered autumn and spring. Problem solving and data modeling using computer productivity software. Emphasis using spreadsheets and database for data analysis. Credit not allowed for CSCI 172, CRT 172, and CS 172.	3 Credits
	CSCI 181 - Web Design and Programming Electronic Publishing on the World Wide Web	3 Credits
	CSCI 250 - Computer Mdlng/Science Majors Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.	3 Credits
Minimum Required Grade: C-		3-9 Total Credits Required

Degree Electives

Rule: May complete remaining degree credits from the following courses for a total of 21 degree credits

Note: Selection of CSCI 191, 291, 391, or 491 must be pre-approved by the advisor.
CSCI 135 may not be counted toward 2 categories of requirements.
6 credits may be taken outside of the Computer Science department but must be pre-approved by the advisor.

	Course	**Credits**
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits
	CSCI 136 - Fund of Computer Science II Offered autumn and spring. Prereq., CSCI 135; coreq., M 115 or M 151 or consent of instr. Continuation of CSCI 135. Survey of computer science topics including recursion, algorithms, basic data structures, operating systems, artificial intelligence, graphics, user interfaces, and social and ethical implications of computing.	3 Credits
	CSCI 191 - Special Topics (R-6) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Students taking CS classes with computer programming components should expect to use additional computer lab time outside of class.	0 To 6 Credits

	CSCI 205 - Programming Languages w/ C/C++ Offered spring. Prereq., CSCI 232 and M 225. Concepts and principles of programming languages with an emphasis on C, C++, and object-oriented programming. Syntax and semantics of object-oriented languages. Principles and implementation of late binding, memory allocation and de-allocation, type-checking, scope, polymorphism, inheritance.	4 Credits
	CSCI 232 - Data Structures and Algorithms Offered autumn. Prereq., 'B-' or better in CSCI 136; or consent of instr. Abstract data types, algorithm analysis, stacks, queues, lists, recursion, trees, hashing, graphs, and applications of data structures in algorithm development. Python programming language used.	4 Credits
	CSCI 291 - Special Topics (R-9) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	CSCI 391 - Special Topics (R-6) Offered intermittently. Prereq., junior standing. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	CSCI 444 - Data Visualization Offered intermittently. Prereq., M 171; programming experience; and junior, senior, or graduate status; or consent of instr. Visualization fundamentals and applications using special visualization software; formulation of 3-D empirical models; translation of 3-D models into graphical displays; time sequences and pseudo-animation; interactive versus presentation techniques; special techniques for video, CD and other media.	3 Credits
	CSCI 491 - Special Topics (R-6) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
Minimum Required Grade: C-		6-15 Total Credits Required

Certificate in Bioinformatics

The Biological Sciences have become more and more data intensive. Many biological biochemistry experiments, including genomic sequencing, gene expression experiments, Nuclear Magnetic Resonance, Mass Spec, Etc., generate huge quantities of data. This certificate ensures that the student has the computational skills necessary to analyze and manipulates such large quantities of data.

Professional Certificate - Bioinformatics

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 12

Required Cumulative GPA: 2.0

Required Courses

Rule: 6 Credits

	Course	Credits
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits
	CSCI 250 - Computer Mdlng/Science Majors Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.	3 Credits
	CSCI 451 - Computational Biology Offered Autumn. Designed for attendance by both computer scientists and biologists. The course will explore the interdisciplinary nature at the juncture of the two fields. Students will be introduced to bioinformatics (emphasis: computational genomics), with exposure to fundamental problems, algorithms, and tools in the field. This includes a basic introduction to genomics, along with in-depth coverage of algorithms and methods relevant to modern computational genomics, including: biological sequence alignment, sequence database homology search, and phylogeny inference. The programming expectations are limited for a 400-level computer science course, but at least one semester of a programming-intensive course is required. Credit not allowed for CSCI 558 and this course	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Elective Courses

Rule: Student must complete one of the following courses

Note: BIOB 488 may fulfill this requirement if not taken as part of the core.

	Course	Credits
	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BIOB 486 - Genomics Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.	3 Credits

	BIOB 488 - Programming for Biology Offered spring. Prereq., BIOB 486 or A- or higher in BIOB 272. An introduction to computer programming using genomic and evolutionary examples. No prior programming experience expected or required.	3 Credits
	CSCI 444 - Data Visualization Offered intermittently. Prereq., M 171; programming experience; and junior, senior, or graduate status; or consent of instr. Visualization fundamentals and applications using special visualization software; formulation of 3-D empirical models; translation of 3-D models into graphical displays; time sequences and pseudo-animation; interactive versus presentation techniques; special techniques for video, CD and other media.	3 Credits
	CSCI 448 - Pattern Recognition Offered intermittently. Prereq., Junior or Senior status. Introduction to the framework of unsupervised learning techniques such as clustering (agglomerative, fuzzy, graph theory based, etc.), multivariate analysis approaches (PCA, MDS, LDA, etc.), image analysis (edge detection, etc.), as well as feature selection and generation. Emphasis will be on the underlying algorithms and their implementation. Credit not allowed for both CSCI 448 and CSCI 548.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Certificate in Computer Programming

Professional Certificate - Computer Programming

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 12
Required Cumulative GPA: 2.0

Required Courses

Rule: Student must complete the following courses
Note: Students may take either CSCI 135 or CSCI 250 to meet the requirement.

	Course	**Credits**
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits

	CSCI 136 - Fund of Computer Science II Offered autumn and spring. Prereq., CSCI 135; coreq., M 115 or M 151 or consent of instr. Continuation of CSCI 135. Survey of computer science topics including recursion, algorithms, basic data structures, operating systems, artificial intelligence, graphics, user interfaces, and social and ethical implications of computing.	3 Credits
	CSCI 232 - Data Structures and Algorithms Offered autumn. Prereq., 'B-' or better in CSCI 136; or consent of instr. Abstract data types, algorithm analysis, stacks, queues, lists, recursion, trees, hashing, graphs, and applications of data structures in algorithm development. Python programming language used.	4 Credits
	CSCI 250 - Computer Mdlng/Science Majors Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Elective Courses

Rule: Students must complete one of the following courses

	Course	**Credits**
	CSCI 205 - Programming Languages w/ C/C++ Offered spring. Prereq., CSCI 232 and M 225. Concepts and principles of programming languages with an emphasis on C, C++, and object-oriented programming. Syntax and semantics of object-oriented languages. Principles and implementation of late binding, memory allocation and de-allocation, type-checking, scope, polymorphism, inheritance.	4 Credits
	CSCI 323 - Software Science Offered autumn. Prereq., CSCI 136. Study, implementation, and assessment of software processes, techniques, methods, and CASE tools. Project management and cost estimation techniques will be examined. A group project may be required.	3 Credits
	CSCI 340 - Database Design Offered spring. Prereq., CSCI 232 or consent of instr. Fundamentals of data modeling, the relational mode, normal forms, file organization, index structures and SQL. Major project involving the design and implementation of a relational database.	3 Credits
	CSCI 411 - Advanced Web Programming Offered intermittently. Prereq., CSCI 136. Programming and software development techniques for developing web-based applications. Scripting and other programming languages that are used for web-based development.	3 Credits

	CSCI 412 - Game and Mobile App Offered intermittently. Prereq., CSCI 232 and 323. Programming and software development techniques for developing gaming and mobile applications. Multiple gaming environments and mobile programming languages are introduced and examined to build modern applications.	3 Credits
	CSCI 443 - User Interface Design Offered intermittently. Prereq., CSCI 232 or consent of instr. Introduction to usability and key concepts of human behavior. Focus on the process of user-centered design, including requirements specification, prototyping, and methods of evaluation. Incorporation of regular design critiques of classmates' work, and emphasis on both oral and written communication skills. Credit not allowed for CSCI 543 and this course.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Programming is an essential skill for solving problems in many fields. Programming gives maximum flexibility in processing and understanding data, constructing computational models, and building user friendly applications. Programming skills are in high demand in the marketplace. Completing this certificate could be the first step towards a career that involves software development.

Students will apply object-oriented principles to develop software systems. Students will learn to apply and program data structures like lists, trees, and hash tables. The elective course allows the student to learn about software engineering, web programming, mobile device programming, or user interface design.

History Department

Robert H. Greene, Chair

The History Department offers an exciting program of instruction for undergraduates in search of an education. The curriculum is designed to provide knowledge and understanding of the background and ramifications of present local, national, and world affairs. The program emphasizes historical analysis and critical thought rather than the memorization of facts. History majors are taught how to read critically, analyze thoughtfully, conduct research carefully, and write intelligently.

The department offers a wide variety of courses ranging in time, space, and theme. Courses span the full range of American history from the colonial period through the recent past. More specialized courses in local and regional history focus on Montana, the West, and the northern Rockies. Offerings in European and world history emphasize social, cultural, and intellectual history, French and German history, British history, Russian and Soviet history, Latin American history, Islamic civilization, East Asian history, and Central and Southwest Asian history. Topical courses explore issues of democracy, diplomacy, human rights, war and peace, terrorism, race and gender, religion, and environmental history.

History provides not only a basis for future employment but also, more importantly, furnishes knowledge and perspective for intelligent leadership in community affairs. Graduates are employed in federal, state, or local governments, with positions ranging from elected office to research analysts. Many teach history in middle schools and high schools while others pursue advanced degrees at the graduate level. Still others go on to attain professional degrees in law, journalism, and business.

The History Department at the University of Montana boasts professors with award-winning scholarship and active research agendas, which greatly enhances the education and training we provide to our students.

The Department offers the Bachelor of Arts, Bachelor of Arts for teaching, Master of Arts, and the Doctor of Philosophy degrees. Our graduate students have found great success in a diverse range of occupations in public history, in education, and in academia.

Department Faculty

Professor

Richard Drake, Professor of History
John Eglin, Professor of History
Linda S. Frey, Professor of History
Anya Jabour, Regents Professor of History; Co-Director, Women & Gender Studies
Mehrdad Kia, Professor of History; Director, Central and Southwest Asian Studies Center

Michael Mayer, Professor of History

Associate Professor

Robert H. Greene, Associate Professor of History; Chair of the History Department
Jody Pavilack, Associate Professor of History; Director of Undergraduate Studies
Tobin Miller Shearer, Associate Professor of History; Director of Graduate Studies (History); Director of African-American Studies
Kyle G. Volk, Associate Professor of History
Jeff Wiltse, Associate Professor of History

Assistant Professor

Claire Rydell Arcenas, Assistant Professor of History
Eric Schluessel, Assistant Professor of History and Political Science

Adjunct

Gillian Glaes, Visiting Associate Professor of History
Jonathan Hall, Visiting Assistant Professor of History

Lecturer

George Price, Lecturer

Research Faculty

Ted Catton, Associate Research Professor
Diane Krahe, Faculty Affiliate
Steven I. Levine, Research Faculty Associate

Affiliates

Hayden Ausland, Professor
David Beck, Professor
Richmond Clow, Professor
Wade Davies, Professor & Co-Chair
Ardeshir Kia, Associate Director, Central and Southwest Asia Program

Emeritus

George Dennison, Past President of the University of Montana; Professor Emeritus of History
David Emmons, Professor Emeritus of History
William E. Farr, Professor Emeritus of History; Associate Director, Center for the Rocky Mountain West
Dan Flores, A.B. Hammond Professor Emeritus of Western History
Harry Fritz, Professor Emeritus of History
Paul Gordon Lauren, Regents Professor Emeritus of History and Distinguished Mansfield Fellow
Ken Lockridge, Professor Emeritus of History
Frederick Skinner, Professor Emeritus of History

History

Back to Top

- HIST 141H - Black: Africa to Hip-Hop

  Credits: 3. Offered autumn. Same as AAS 141H. This course introduces students to the primary questions, themes, and approaches to African-American Studies. In addition to examining key historical periods such as Reconstruction, the Harlem Renaissance, and the Civil Rights era, students will encounter Hip-Hop, African-American film, African-American religion, and contemporary identity politics. This course concludes by discussing the reasons for and new directions in African-American studies, including diaspora studies, Pan-Africanism, and post-

colonial studies. Overall students will gain new insight into the social, cultural, political, and intellectual, experiences of a diverse people and into the history and contemporary experience of the United States. Course Attributes: Hist & Cultural Studies (H) Cultural Intl Diversity (X)

- HIST 208H - Discovering Africa
  Credits: 3. Same as AAST 208H. Interdisciplinary study of the history of pre-colonial Africa, focusing on social, economic, political and cultural institutions and traditions including the wealth, diversity and complexity of ancient and classical African civilizations and cultures. - HIST 465 - Hist Amer Indian Affrs 19 Cent
  Credits: 3. Same as NASX 465. A study of tribal encounters and adjustments to the American nations in the nineteenth century.
- HIST 466 - Hist of Indian Affrs from 1890
  Credits: 3. Same as NASX 466. A study of tribal encounters and adjustments to the American nation from 1890.
- HIST 482 - Revolution & Reform in China
  Credits: 3. A history of the rise and fall of the Maoist regime and the complicated impact of the epochal post Mao reform movement.

History: American

Back to Top

- HSTA 101H - American History I
  Credits: 4. (AM) Offered autumn. A comprehensive introductory history of Colonial, Revolutionary and 19th century America, to 1877. Lecture-discussion. Credit not allowed for both 101H and 103H. Course Attributes: Hist & Cultural Studies (H) Democracy and Citizenship (Y)
- HSTA 102H - American History II
  Credits: 4. (AM) Offered spring. A comprehensive introductory history of the U.S. since 1877. Lecture-discussion. Credit not allowed for both HSTA 102H and 104H. Course Attributes: Hist & Cultural Studies (H) Democracy and Citizenship (Y)
- HSTA 103H - Honors American History I
  Credits: 4. (AM) Offered autumn. Enrollment by consent of instructor. A comprehensive introductory history of Colonial, Revolutionary, and 19th century America, to 1877. Lecture-honors discussion. Credit not allowed for both 103H and 101H. Course Attributes: Honors Course Hist & Cultural Studies (H) Democracy and Citizenship (Y)
- HSTA 104H - Honors American History II
  Credits: 4. (AM) Offered spring. Enrollment by consent of instructor. A comprehensive introductory history of the U. S. since 1877. Lecture-honors discussion. Credit not allowed for both HSTA 102H and 104H. Course Attributes: Honors Course Hist & Cultural Studies (H) Democracy and Citizenship (Y)
- HSTA 191 - Special Topics
  Credits: 1 TO 6. (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.
- HSTA 198 - Internship

Credits: 1 TO 6. Prereq., consent of department. Extended classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.

- HSTA 255 - Montana History

  Credits: 3. (AM) Offered autumn. An introductory and interpretive history from Lewis and Clark to 2000.

- HSTA 262 - Abolitionism

  Credits: 3. (AM) Same as AAS 262. Interdisciplinary, historical perspective on early 19th century movement to abolish slavery and racial discrimination in the United States.

- HSTA 291 - Special Topics

  Credits: 1 TO 12. (R-12) (AM) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- HSTA 311 - Early America

  Credits: 3. (AM) Emphasis changes from year to year. Can touch upon the political economy of Puritanism, through gender and family to the preconditions for the American Revolution.

- HSTA 315 - Early American Republic

  Credits: 3. (AM) Democracy, nationalism and sectionalism, the War of 1812, the second party system, social order and disorder, the capitalist revolution. Course Attributes:
  Writing Course-Intermediate

- HSTA 316 - American Civil War Era

  Credits: 3. (AM) Civil War and Reconstruction; the triumph of the industrialist and capitalist ethic.

- HSTA 320 - Birth of Modern US

  Credits: 3. (AM) The history of the U.S. from 1877 to 1920 is largely the story of Americans responding to profound social, cultural and economic change. In an effort to bring order to their changing world, Americans created new institutions, retooled their ideologies, and improved the nation's infrastructure. The order they created is, in modified form, still with us today. Students will explore the myriad changes that transformed the United States during this period and study the social, political, and cultural struggles that shaped the emergence of Modern America.

- HSTA 321 - America in Crisis

  Credits: 3. (AM) This era in U.S. history was marked by a series of crises: the contested transition to modernity during the 1920s, the Great Depression, and World War II and its aftermath. This course will explore how Americans responded to these crises, why they responded to them the way they did, and how their responses altered the society in which they lived.

- HSTA 322 - U.S. History: WWII to Present

  Credits: 3. (AM) The Cold War and its consequences, the civil rights revolution, affluence and anxiety, counter-culture, political radicalism, feminism, the Nixon years, Watergate and after.

- HSTA 323 - U.S. in the 1950s

  Credits: 3. (AM) Examines the political, social, cultural, intellectual developments of America in the 1950s. Particular emphasis is placed on cultural history.

- HSTA 324 - U.S. in the 1960s

  Credits: 3. (AM) Examines the political, social, cultural, intellectual developments of America in the 1960s. Topics include the Great Society, political radicalism, the counter culture, black radicalism, and Vietnam.

- HSTA 333 - American Military History

  Credits: 3. (R-6) (AM) The French and Indian Wars to Vietnam and beyond; chronological and topical accounts.

- HSTA 335 - Movie America

  Credits: 3. (AM) This course examines major topics and themes in United States history from the early twentieth century to the present using movies as primary sources.

- HSTA 342H - Afr Amer Hist to 1865

Credits: 3. (AM) Offered intermittently. Same as AAS 342H. Survey of the African American experience from the African background to the end of the Civil War. Focus on Black American quest for the American Dream, and how Blacks attempted to deal with the challenges of enslavement and racism. Course Attributes: Historical & Cultural Course

- HSTA 343H - Afr Amer Hist Since 1865

  Credits: 3. (AM) Same as AAS 343H. Study of the African American experience since the Civil War. Change and continuity in the African American experience, the fight against Jim Crow, the struggle for civil rights, and post-civil rights economic, political, social and cultural developments and challenges. Course Attributes: Hist & Cultural Studies (H)

- HSTA 344 - Afro-American Struggle for Equ

  Credits: 3. (AM) A survey of the various efforts by African Americans to achieve racial equality in the United States from the late 19th century through the 1960s.

- HSTA 347 - Voodoo,Muslim,Church:Black Rel

  Credits: 3. (AM) The African American religious experience encompasses Islam, Christianity, Santeria, voodoo, and many others. In this course, students will examine the history of religious expression within the African-American community from the colonial era through the twentieth century. Central to the course question, "How did religion shape the experience of the African-American community?" Students will also examine the ways in which religious practice influenced social, political, and cultural changes in American history. Same as AAS 347. Course Attributes: Writing Course-Intermediate

- HSTA 361 - The American South

  Credits: 3. (AM) Social history of the American South with particular attention to race, class, and gender.

- HSTA 370H - Wmn Amer Colonial to Civil War

  Credits: 3. Offered autumn. Interpretive overview of major themes and events in U.S. womens history to 1865. Same as WGS 370H. Course Attributes: Hist & Cultural Studies (H)

- HSTA 371H - Wmn Amer Civil War to Present

  Credits: 3. Offered spring. Interpretive overview of major themes and events in U.S. women's history from 1865 to the present. Same as WGS 371. Course Attributes: Hist & Cultural Studies (H)

- HSTA 372 - The American Revolution

  Credits: 3. (AM) Delving into the history of the early modern Atlantic world, this course examines the transnational ramifications of the American Revolution. Specifically, it examines the Revolution's economic and ideological origins, European involvement in the Revolutionary War, as well as the Revolution's impact on African American slavery and the slave trade. We will also consider its implications for Haitian and Latin American independence. And finally, we will discuss the creation of the U.S. Constitution, America's struggle for political sovereignty, and the Revolution's impact on Native Americans, women and families, and conceptions of American identity during the Early National period.

- HSTA 377 - Alcohol in American History

  Credits: 3. (AM) This course explores the controversial history of alcohol in American history beginning in the colonial period and ending in the recent past. It blends varied historical approaches, including political, legal, business, social, and cultural history, to interrogate the manifold ways that alcohol has shaped the American nation and the everyday lives of its citizens.

- HSTA 380 - AmericanConstitutional History

  Credits: 3. (AM) An examination of major issues in the American constitutional past. Topics include the creation of the U.S. Constitution and the problem of ?original intent,? courts and judicial review, slavery and anti-slavery, the bill o frights, industrial capitalism and the welfare state, and majority rule and minority rights in American democracy.

- HSTA 382H - History of American Law

  Credits: 3. (AM) Issues in the social history of law from the colonial period to the present. Course Attributes: Historical & Cultural Course

- HSTA 385 - Families & Children in America

  Credits: 3. (AM) Historical overview of families and children in the United States from the colonial era to the present. Topics include changing patterns of family life, the evolution of attitudes toward children and youth, the relationship between the American family and the nation-state,

and debates over "family values" from the nation's founding to the present. Course Attributes: Writing Course-Intermediate

- HSTA 391 - Special Topics

  Credits: 1 TO 12. (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- HSTA 415 - The Black Radical Tradition

  Credits: 3. Offered intermittently. Same as HSTA 415. Prereq., HSTR 200 and only open to majors and minors in history or consent of instructor. From slave revolts through to the Move rebellion in Philadelphia, this course examines how the African-American community has engaged in radical efforts to change the status quo in the name of seeking justice. Course Attributes: Writing Course-Advanced

- HSTA 417 - Prayer & Civil Rights

  Credits: 3. (AM) Same as HSTA 417. HSTR 200 and only open to majors and minors in history or consent of instructor. This course explores the meaning of public prayer in the Civil Rights Movement. Built around the question, "Does religion help or hinder the pursuit of social change?" this class combines historical and religious studies inquiry to trace changes in civil rights activists' efforts to make use of religion. By focusing on a particular religious practice - in this case prayer - in a specific, but limited period of time, this course challenges students to consider how meaning is formed through historical action and study the social significance of religious practice. This formed through historical action and study the social significance of religious practice. This course complicates prevailing ideas about the normalcy of African-American religious practitioners' prayer, invites students to examine their assumptions about the nature of prayer, and traces how religion spilled out of sanctuaries into the streets during the civil rights era. Course Attributes: Writing Course-Advanced

- HSTA 422 - U.S. After WWII: Research Sem

  Credits: 3. (AM) Prereq. HSTR 200. Enrollment for history majors and minors , graduate students in history, or by consent of the instructor. This course offers students an opportunity to do original research and produce an article-length research paper on a topic in post-war American history. It meets the department's requirement of an upper-level research seminar as well as the upper-division writing expectation in the major. Course Attributes: Writing Course-Advanced

- HSTA 461 - Research in Montana History

  Credits: 3. (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. This course is a research and writing seminar in Montana history. Students will learn advanced research methodology in history and will be exposed to a variety of databases and source collections in Montana history that are available locally and online. Students will research and write a primary-source based paper on a topic in Montana history. This course fulfills the upper-division writing requirement for the history department and the university. Course Attributes: Writing Course-Advanced

- HSTA 471 - Writing Women's Lives

  Credits: 3. (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Consent of instructor required. Upper-division writing-intensive seminar in women's history. Students will write an original research paper based on primary source materials. Course Attributes: Writing Course-Advanced

- HSTA 491 - Special topics

  Credits: 1 TO 12. (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.

- HSTA 494 - Seminar

  Credits: 1 TO 6. (R-6) Consent of instructor.

- HSTA 501 - Readings in Early Am Hist

  Credits: 3. Graduate readings course in U.S. history covering the period from pre-contact to 1877. Level: Graduate

- HSTA 502 - Readings in Modern Am Hist

  Credits: 3. Graduate readings course in U.S. history covering the period from 1877 to the present. Level: Graduate

- HSTA 550 - Early America

  Credits: 3. Intensive reading. Level: Graduate

- HSTA 551 - The Early American Republic
  Credits: 3. Intensive reading. Level: Graduate
- HSTA 553 - Modern America
  Credits: 3. Intensive reading. Level: Graduate
- HSTA 564 - US Environmental History
  Credits: 3. Intensive reading. Level: Graduate
- HSTA 566 - The American West
  Credits: 3. Intensive reading. Level: Graduate
- HSTA 567 - Research in History
  Credits: 3. Intensive reading. Level: Graduate
- HSTA 570 - U.S. Women's History
  Credits: 3. Intensive readings. Level: Graduate
- HSTA 594 - Seminar
  Credits: 1 TO 12. (R-12) Prereq., 27 credits in history. Directed research. Level: Graduate
- HSTA 595 - Special Topics
  Credits: 0 TO 9. (R-9) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate
- HSTA 596 - Independent Study
  Credits: 0 TO 12. (R-12) Course material appropriate to the needs and objectives of the individual student. Level: Graduate
- HSTA 597 - Independent Study
  Credits: 1 TO 9. (R-9) Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate
- HSTA 598 - Internship
  Credits: 1 TO 8. (R-8) Prereq., consent of department and Internship Services office. Practical application of classroom learning in off-campus placements. Level: Graduate
- HSTA 599 - Professional Paper
  Credits: 1 TO 6. (R-6) Preparation of a professional paper appropriate to the needs and objectives of the individual student. Level: Graduate
- HSTA 699 - Thesis/Dissertation
  Credits: 1 TO 6. (R-6) Preparation of a thesis or manuscript based on research for presentation and/or publication. Level: Graduate

  Credits: 3. (WRLD) Prereq., junior standing or consent of instructor. A history of key reform movements from the mid-19th century (when China was rocked by rebellion and the entry of the West) to the Maoist period.
- HSTR 459 - Artistic Trad Cent & SW Asia
  Credits: 3. (WRLD) Analysis of the study of human artistic creativity and scientific innovations of various cultures in Central and Southwest Asia since ancient times.
- HSTR 491 - Special Topics
  Credits: 1 TO 12. (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.

- HSTR 492 - Independent Study
  Credits: 1 TO 12. (R-12) Prereq., consent of instr.
- HSTR 494 - Seminar
  Credits: 1 TO 6. (R-6) Prereq., consent of instr. A review and discussion of current research. Topics vary.
- HSTR 495 - Special Topics
  Credits: 1 TO 12. (R-12) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.
- HSTR 500 - Tchg Discussion Sections
  Credits: 1. (R-4) Supervised teaching and reading keyed to survey courses in American history and western civilization. Level: Graduate
- HSTR 516 - Modern Europe
  Credits: 3. Offered alternate years. Intensive reading in 19th and 20th century European history. Level: Graduate
- HSTR 540 - Europ Cultural & Intellect
  Credits: 3. Intensive reading. Level: Graduate
- HSTR 585 - Latin America
  Credits: 3. Intensive reading in Colonial and Modern Latin American history. Level: Graduate
- HSTR 594 - Seminar
  Credits: 1 TO 12. (R-12) Prereq., 27 credits in history. Directed research. Level: Graduate
- HSTR 595 - Special Topics
  Credits: 1 TO 9. (R-9) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate
- HSTR 596 - Independent Study
  Credits: 1 TO 12. (R-12) Course material appropriate to the needs and objectives of the individual student. Level: Graduate Course Attributes: Independent Study
- HSTR 597 - Research in History
  Credits: 1 TO 9. (R-9) Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate
- HSTR 598 - Internship
  Credits: 1 TO 8. (R-8) Prereq., consent of department and Internship Services office. Practical application of classroom learning in off-campus placements. Level: Graduate Course Attributes: Internships/Practicums
- HSTR 599 - Professional Paper
  Credits: 1 TO 6. (R-6) Preparation of a professional paper appropriate to the needs and objectives of the individual student. Level: Graduate
- HSTR 699 - Thesis/Dissertation
  Credits: 1 TO 9. (R-6) Preparation of a thesis or manuscript based on research for presentation and/or publication. Level: Graduate

History-Political Science

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

This major is intended solely for students who want to be licensed to teach history, government, and one additional social science at the middle and high school levels. Requirements for the combined history/political science major are as follows: **in history,** a minimum of 31 credits, including: HSTR 101 or 102, HSTA 101 and 102, HSTR 200, HSTA 255, one elective course in world history, three upper-division elective courses to include at least one American and one European course, and one HSTA/HSTR 400-level approved writing course; **in political science,** a minimum of 30 credits, including: PSCI 210, 220, 230, 250, three upper-division elective courses in American government or public law, and three upper-division elective courses in comparative or international relations; **in one additional social science,** a minimum of 9 elective credits in economics or geography or psychology or sociology; and EDU 497 (C&I 428). Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. Students are eligible for a teaching license in social studies broadfield. See the Department of Curriculum & Instruction for more information.

To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a major/minor form for graduation or the major/minor/concentration section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Tracks will not appear on your UM transcript, diploma, university lists, student data system, or university publication and are used for advising purposes only. You do not fill out a major change for a track.

Bachelor of Arts - History-Political Science; Track: Teaching Social Studies

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 73

Required Cumulative GPA: 2.0

Note: Students must be formally admitted to the Teacher Education Program and complete all of the professional
education licensure requirements. Students who complete the history/political science combined major are eligible for a teaching license in social studies broadfield. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A major GPA of 2.75 is required to be eligible for student teaching.

Lower Division Core Courses

Rule: Must complete the following subcategories

28 Total Credits Required

Core Courses

Rule: Must complete all of the following courses:

	Course	Credits
	HSTA 255 - Montana History (AM) Offered autumn. An introductory and interpretive history from Lewis and Clark to 2000.	3 Credits
	HSTR 200 - Intro: Historical Methods Offered autumn and spring. Enrollment limited to history majors or by consent of the instructor. This course introduces students to the practice of history and prepares them for upper-division courses in the field. Students will learn to critically read secondary sources, research in primary sources, analyze documents, and write clear and convincing historical essays. This course is required for recently declared history majors and minors. Students should take it before taking upper-division history courses.	1 Credits

	PSCI 210S - Intro to American Government Offered every term. Not open to senior level political science majors except with consent of instructor. Constitutional principles, structures, and the political processes of the national government.	3 Credits
	PSCI 220S - Intro to Comparative Govt Offered every term. Not open to senior level political science majors except with consent of instr. Introduction to the basic political concepts, themes, values and dilemmas as they apply to the world's diverse societies and cultures.	3 Credits
	PSCI 230X - Intro to International Rel Offered every term. Not open to senior level political science majors except with consent of instr. Review of the evolution of the nation-state system and survey of contemporary international actors, issues and forces for stability and change.	3 Credits
	PSCI 250E - Intro to Political Theory Offered spring. Analysis of the various attempts (from Plato to Marx) to explain, instruct, and justify the distribution of political power in society. Emphasis is placed upon those theories whose primary concern is to define the nature of the "good" society.	3 Credits
Minimum Required Grade: C-		16 Total Credits Required

American History Introductory Courses

Rule: Must complete 2 of the following courses

Note: Student must select either the regular or honors version of a course to apply to the requirement.

	Course	**Credits**
	HSTA 101H - American History I (AM) Offered autumn. A comprehensive introductory history of Colonial, Revolutionary and 19th century America, to 1877. Lecture-discussion. Credit not allowed for both 101H and 103H.	4 Credits
	HSTA 102H - American History II (AM) Offered spring. A comprehensive introductory history of the U.S. since 1877. Lecture-discussion. Credit not allowed for both HSTA 102H and 104H.	4 Credits
	HSTA 103H - Honors American History I (AM) Offered autumn. Enrollment by consent of instructor. A comprehensive introductory history of Colonial, Revolutionary, and 19th century America, to 1877. Lecture-honors discussion. Credit not allowed for both 103H and 101H.	4 Credits
	HSTA 104H - Honors American History II (AM) Offered spring. Enrollment by consent of instructor. A comprehensive introductory history of the U. S. since 1877. Lecture-honors discussion. Credit not allowed for both HSTA 102H and 104H.	4 Credits

Minimum Required Grade: C-	8 Total Credits Required

Western History Introductory Courses

Rule: Must complete 1 of the following courses

Note: Student must select either the regular or honors version of a course to apply to the requirement.

	Course	Credits
	HSTR 101H - Western Civilization I (EU) Offered autumn. A comprehensive, introductory history of western civilization from classical antiquity to 1648. Lecture-discussion. Credit not allowed for both 101H and 103H.	4 Credits
	HSTR 102H - Western Civilization II (EU) Offered spring. A comprehensive, introductory history of western civilization from 1648 to the present. Lecture-discussion. Credit not allowed for both HSTR 102H and 104H.	4 Credits
	HSTR 103H - Honors Western Civilization I (EU) Offered autumn. Limited enrollment by consent of instr. only. A comprehensive, introductory history of western civilization from classical antiquity to 1648. Lecture-honors discussion. Credit not allowed for both 103H and 101H.	4 Credits
	HSTR 104H - Honors Western Civilization II (EU) Offered spring. Limited enrollment by consent of instructor only. A comprehensive introductory history of western civilization from 1648 to the present. Lecture-honors discussion. Credit not allowed for both HSTR 102H and 104H.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Upper Division History Elective

Rule: Must complete at least 3 credits of upper division HSTA or HSTA electives

Minimum Required Grade: C-

3 Total Credits Required

American History Elective

Rule: Choose at least 3 credits from the following courses

Note: Students are expected to take 3 additional Upper Division History credits beyond those specified and may be selected from this category.

Note: HSTR 391, 392, 491, 492 and HSTA 391 and 491 may apply to this requirement depending on the course content.

	Course	Credits

	HSTA 311 - Early America (AM) Emphasis changes from year to year. Can touch upon the political economy of Puritanism, through gender and family to the preconditions for the American Revolution.	3 Credits
	HSTA 315 - Early American Republic (AM) Democracy, nationalism and sectionalism, the War of 1812, the second party system, social order and disorder, the capitalist revolution.	3 Credits
	HSTA 316 - American Civil War Era (AM) Civil War and Reconstruction; the triumph of the industrialist and capitalist ethic.	3 Credits
	HSTA 320 - Birth of Modern US (AM) The history of the U.S. from 1877 to 1920 is largely the story of Americans responding to profound social, cultural and economic change. In an effort to bring order to their changing world, Americans created new institutions, retooled their ideologies, and improved the nation's infrastructure. The order they created is, in modified form, still with us today. Students will explore the myriad changes that transformed the United States during this period and study the social, political, and cultural struggles that shaped the emergence of Modern America.	3 Credits
	HSTA 321 - America in Crisis (AM) This era in U.S. history was marked by a series of crises: the contested transition to modernity during the 1920s, the Great Depression, and World War II and its aftermath. This course will explore how Americans responded to these crises, why they responded to them the way they did, and how their responses altered the society in which they lived.	3 Credits
	HSTA 322 - American History: WWII to Pres (AM) The Cold War and its consequences, the civil rights revolution, affluence and anxiety, counter-culture, political radicalism, feminism, the Nixon years, Watergate and after.	3 Credits
	HSTA 323 - U.S. in the 1950s (AM) Examines the political, social, cultural, intellectual developments of America in the 1950s. Particular emphasis is placed on cultural history.	3 Credits
	HSTA 324 - U.S. in the 1960s (AM) Examines the political, social, cultural, intellectual developments of America in the 1960s. Topics include the Great Society, political radicalism, the counter culture, black radicalism, and Vietnam.	3 Credits
	HSTA 333 - Key Events in American Militar (R-6) (AM) The French and Indian Wars to Vietnam and beyond; chronological and topical accounts.	3 Credits
	HSTA 335 - Movie America (AM) This course examines major topics and themes in United States history from the early twentieth century to the present using movies as primary sources.	3 Credits

	HSTA 342H - Afr Amer Hist to 1865 (AM) Offered intermittently. Same as AAS 342H. Survey of the African American experience from the African background to the end of the Civil War. Focus on Black American quest for the American Dream, and how Blacks attempted to deal with the challenges of enslavement and racism.	3 Credits
	HSTA 343H - Afr Amer Hist Since 1865 (AM) Same as AAS 343H. Study of the African American experience since the Civil War. Change and continuity in the African American experience, the fight against Jim Crow, the struggle for civil rights, and post-civil rights economic, political, social and cultural developments and challenges.	3 Credits
	HSTA 347 - Voodoo, Muslim, Church (AM) The African American religious experience encompasses Islam, Christianity, Santeria, voodoo, and many others. In this course, students will examine the history of religious expression within the African-American community from the colonial era through the twentieth century. Central to the course question, "How did religion shape the experience of the African-American community?" Students will also examine the ways in which religious practice influenced social, political, and cultural changes in American history. Same as AAS 347.	3 Credits
	HSTA 354X - Ind MT Since Reserv Era (AM) Offered autumn odd-numbered years. Same as ANTH 324X and NAS 324X. Examination of the history of Montana Indians since the establishment of the reservations, contemporary conditions, and issues among both reservation and non-reservation Indian communities in the state. Special attention given to social and economic conditions, treaty rights, tribal sovereignty, and legal issues.	3 Credits
	HSTA 361 - The American South (AM) Social history of the American South with particular attention to race, class, and gender.	3 Credits
	HSTA 370H - Wmn Amer Colonial to Civil War Offered autumn. Interpretive overview of major themes and events in U.S. womens history to 1865. Same as WGS 370H.	3 Credits
	HSTA 371H - Wmn Amer Civil War to Present Offered spring. Interpretive overview of major themes and events in U.S. women's history from 1865 to the present. Same as WGS 371.	3 Credits
	HSTA 372 - The American Revolution (AM) Delving into the history of the early modern Atlantic world, this course examines the transnational ramifications of the American Revolution. Specifically, it examines the Revolution's economic and ideological origins, European involvement in the Revolutionary War, as well as the Revolution's impact on African American slavery and the slave trade. We will also consider its implications for Haitian and Latin American independence. And finally, we will discuss the creation of the U.S. Constitution, America's struggle for political sovereignty, and the Revolution's impact on Native Americans, women and families, and conceptions of American identity during the Early National period.	3 Credits

	HSTA 380 - AmericanConstitutional History (AM) An examination of major issues in the American constitutional past. Topics include the creation of the U.S. Constitution and the problem of ? original intent,? courts and judicial review, slavery and anti-slavery, the bill o frights, industrial capitalism and the welfare state, and majority rule and minority rights in American democracy.	3 Credits
	HSTA 382H - History of American Law (AM) Issues in the social history of law from the colonial period to the present.	3 Credits
	HSTA 385 - Families & Children in America (AM) Historical overview of families and children in the United States from the colonial era to the present. Topics include changing patterns of family life, the evolution of attitudes toward children and youth, the relationship between the American family and the nation-state, and debates over "family values" from the nation's founding to the present.	3 Credits
	HSTA 494 - Seminar (R-6) Consent of instructor.	1 To 6 Credits
	HSTR 364 - Environmental History (AM) Prereq., lower-division course in Perspective 5 or consent of instr. A history of the human-nature interaction in the United States.	3 Credits
	HSTR 367 - 19th Cent Amer West (AM) Euro-American movement and conflict in the nineteenth century trans-Mississippi west.	3 Credits
	HSTR 369 - 20th Cent Amer West (AM) The contemporary trans-Mississippi West.	3 Credits
	NASX 464 - Hist Amer Indian Affrs to 1776 Offered Autumn. Same as HIST 464. A study of American Indian relations with Europeans and the United States from first contact to 1776.	3 Credits
	NASX 465 - Hist Amer Indian Affrs 10 Cent Offered Spring. Same as HIST 465. A study of tribal encounters and adjustments to the American nations in the nineteenth century.	3 Credits
	NASX 466 - Hist of Indian Affrs from 1890 Offered Autumn. Same as HIST 466. A study of tribal encounters and adjustments to the American nation from 1890.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

World History Elective

This course focuses on the unique set of collective action problems faced by global actors in the governance of the environment and the institutions they use to overcome those problems. Themes include the tragedy of the commons, climate change, and environmental security.	3 Credits
	PSCI 334 - International Security Offered Spring. Prereq. PSCI 230 and junior standing or consent of instr. Explores the meaning, sources, and future of human, national, and international security. Considers a range of historical and contemporary threats (interstate war, civil war, terrorism, crime, natural disaster, human accident, disease, and deprivation), assesses the vulnerability of individuals and states to each threat, and evaluates national and international strategies to reduce them.	3 Credits
	PSCI 335 - American Foreign Policy Prereq., PSCI 230X and junior standing or consent of instr. American diplomatic, economic and defense policies since World War II and their significance in international politics.	3 Credits
	PSCI 336 - European Union Offered spring. Prereq junior standing or consent of instructor. Historical and contemporary analysis of political and economic integration in Europe with a focus on the political system of the European Union.	3 Credits

	PSCI 337 - Model United Nations Offered autumn. Prereq., sophomore standing or consent of instr. History and structure of the UN. Contemporary global problems, and the UN's role in addressing them. Class has both active learning and service learning dimensions. Students plan, organize and run the annual Montana Model UN high school conference.	3 Credits
	PSCI 420 - Exp Offering: Comp Politics (R-9) Offered intermittently. Experimental or one-time offerings in the subfield of comparative politics.	1 To 9 Credits
	PSCI 422 - Revolution & Reform in China Offered autumn. A history of the rise and fall of the Maoist regime and the complicated impact of the epochal post Mao reform movement.	3 Credits
	PSCI 430 - Exp Offering: Intrnt Relations (R-9) Offered intermittently. Prereq., junior standing. Experimental or one-time offerings in the subfield of international relations.	1 To 9 Credits
	PSCI 431 - Politics of Global Migration Prereq., junior standing or consent of instr. Exploration of the elective and forced migration of peoples within countries and across national boundaries. Geographical coverage includes Asia, North and Central America, Africa, and Europe. Attention to policy and gender issues surrounding economic and political migration.	3 Credits
	PSCI 433 - International Law & Org Offered fall. Prereq. PSCI 230 and junior standing or consent of instr. Introduction to classical principles and contemporary issues of the law of nations and the organizations created to facilitate international cooperation.	3 Credits
	PSCI 463 - Development Administration Offered autumn. Prereq., junior standing or consent of instr. Study of the functions and processes of public administration in the Third World. Focus on alleviating poverty and underdevelopment. Includes project design and development planning activities.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Additional Electives

Rule: Must complete 9 credits in 1 of the following fields

9 Total Credits Required

Economics

Rule: May complete 9 credits

Note: ECNS 191, 391, 392, 491, and 492 may apply to this requirement depending on the course content.

	Course	**Credits**

	ECNS 101S - Economic Way of Thinking Offered autumn and spring. A critical examination of the market mechanism as a social decision-making device to guide the use of a nation's resources. The limitations of these processes in light of current economic problems such as the rise of the large corporation, monopoly, environmental degradation, economic discrimination and the increasing role of the government.	3 Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	ECNS 202S - Principles of Macroeconomics Offered every term. Prereq., ECNS 201S. The determination of the level of national economic activity, inflation, economic instability, the role of money and financial institutions, and selected topics in public economic policy.	3 Credits
	ECNS 217X - Issues in Economic Development Offered intermittently. Prereq., ECNS 201S. Study of the processes of economic growth and development in the less developed world.	3 Credits
	ECNS 301 - Intermediate Micro with Calc Offered spring and autumn. Prereq., ECNS 201S and M 162 or equiv. Analysis of consumer behavior, production, factor pricing, externalities and public goods.	3 Credits
	ECNS 302 - Intermediate Macroeconomics Offered autumn and spring. Prereq., ECNS 202S. Analysis of national income determination, unemployment, and inflation with emphasis on the role of fiscal and monetary policy.	3 Credits
	ECNS 310 - Intro Health Economics Offered intermittently. Prereq., economics course. Survey of market forces that govern the production and consumption of medical care in the U.S. market; uncertainty, asymmetric information, and concentrations of market power resulting in inefficient outcomes. Topics include cost escalations, role of medical insurance, and problems of an aging population.	3 Credits
	ECNS 312 - Labor Economics Offered intermittently. Prereq., ECNS 201S. Economic analysis of labor markets. Theories of wage determination, discrimination and poverty with implications for manpower policy.	3 Credits
	ECNS 313 - Money and Banking Offered intermittently. Prereq., ECNS 202S. Definition and role of money; banks and other financial institutions as suppliers of money; the federal reserve system as a regulator of money; monetary theories, history, and policy.	3 Credits
	ECNS 315 - History of Economic Thought Offered intermittently. Prereq., ECNS 202S. A survey of economic ideas from antiquity through the present.	3 Credits

	ECNS 320 - Public Finance Offered intermittently. Prereq., ECNS 201S. Rationale for governmental expenditure; public goods; public choice. Analysis of expenditure policy. Intergovernmental relations.	3 Credits
	ECNS 403 - Introduction to Econometrics Offered autumn. Prereq., an introductory statistics course. Quantitative methods in economics with emphasis on regression analysis.	4 Credits
	ECNS 405 - Game Theory Offered every other autumn. Prereq., ECNS 201S. An introduction to the tools of game theory and how they are applied. In many real-world economic situations, outcomes are jointly determined where one agent's choices will affect another's welfare, and vice versa. Game theory provides a method of analyzing these economic situations where decisions are interrelated, and each agent recognizes this fact and thus makes decisions strategically.	3 Credits
	ECNS 406 - Industrial Organization Offered intermittently. Prereq., ECNS 201S. The theoretical basis for public policy solutions to market power. Emphasis on case studies in matters of antitrust, regulation of public utilities, and public ownership of business enterprises.	3 Credits
	ECNS 431 - International Trade Offered intermittently. Prereq., ECNS 201 or consent of instr. International trade: theory, policy, institutions, and issues. Analysis of comparative advantage and trade restrictions, negotiations, and agreements.	3 Credits
	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits
	ECNS 445 - Int Env Econ & Clim Change Offered autumn every other year. Same as CCS 445. Prereq., ECNS 201S. An introduction to the economics of various policy approaches towards climate change and other international environmental issues such as trans-boundary pollution problems, international trade and the environment and pollution haven hypothesis.	3 Credits
	ECNS 450 - Adv. Topics in Economic Dev. Offered intermittently. Prereq., ECNS 201S and ECNS 202S, or consent of instructor. Advanced treatment of the processes of economic growth and development in the less developed world.	3 Credits
	ECNS 488 - Res Meth & Thesis Design Offered autumn. Prereq., senior standing, economics major. Development of senior thesis proposal; presentation of research topics and methods by economics faculty and seminar participants.	2 Credits

Minimum Required Grade: C-	9 Total Credits Required

Geography

Rule: May complete 9 credits

Note: GPHY 391, 491, and 492 may apply to this requirement depending on the course content.

	Course	Credits
	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 112N - Intro to Phys Geography Lab Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385.	1 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits
	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits
	GPHY 241 - Montana Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.	3 Credits
	GPHY 243S - Africa Offered autumn even numbered years. A survey of the biophysical and cultural geography of Sub Saharan Africa. Emphasis is on the region's cultural historical development and current ecological, demographic, and economic patterns.	3 Credits

	GPHY 245X - The Middle East Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region.	3 Credits
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
	GPHY 291 - Special Topics (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 336 - Exploration & Discovery Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.	3 Credits

	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits
	GPHY 342 - North America Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are explored.	3 Credits
	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 347 - Regional Geography (Mult Reg) (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.	3 Credits
	GPHY 348 - Field Studies in Geography (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.	3 Credits
	GPHY 378 - Preceptorship in Geography (R-6) Offered autumn and spring. Consent of instructor. Assisting a faculty member by tutoring, conducting review sessions, helping students with research projects, and carrying out other class-related responsibilities. Open to juniors and seniors who apply to instructor for consent.	1 To 3 Credits
	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits

	GPHY 423 - Migration & Population Change Offered intermittently. Focus on internal migration and population change in the U.S., in particular in the Mountain West. Review of migration theories and empirical research; development of practical skills for conducting empirical research related to migration and population change.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
	GPHY 434 - Food and Famine Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.	3 Credits
	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits
	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits
	GPHY 443 - Cultural & Global Competence Offered intermittently. Prereq., upper-division or graduate standing. Designed to increase awareness of student's own culture and increase cross-cultural sensitivity. Understanding the perspectives of other cultures and resolving possible conflicts. Examination of the role of perception, belief systems, social structures, and culture practices.	3 Credits
	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	GPHY 445 - Regional Geography Offered intermittently. In-depth treatment of a geographic region, a particular regional problem, or the methodology of regional geography. Topics vary.	3 Credits

	GPHY 465 - Planning Princ & Processes Offered autumn even-numbered years. Prereq., upper-division or graduate standing. Surveys planning principles, practices and issues in urban and rural environments. Attention is devoted to Montana, state planning programs in the United States., and federal programs and policies that influence land-use planning. Emphasizes skills and techniques used in plan development and implementation.	3 Credits
	GPHY 466 - Environmental Planning Offered autumn odd-numbered years. Introduction to practice of environmental planning which includes elements of physical planning, planning design at the landscape scale, and conservation planning. Includes field visits and project-based work.	3 Credits
	GPHY 468 - Community & Regional Analysis Offered autumn. Coreq., GPHY 469. Socio-demographic analysis of communities and regions: population, employment, and spatial interaction. Hands-on course designed for future planners, GIS analysts, and others interested in socio-demographic change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GPHY 469 - Planning & Analysis Laboratory Offered autumn. Coreq., GPHY 468. Laboratory to accompany GPHY 468.	1 Credits
	GPHY 481 - Advanced Cartographic Design Offered autumn. Prereq., GPHY 284 or FORS 250 or Consent of Instructor. The course concentrates on the presentation of spatial data and the construction of cartographic products that have clear communication and excellent aesthetic design. The class meets the University's service learning course objectives through a semester long project where students consult with a client, design and construct a map, and deliver a final product.	3 Credits
	GPHY 482 - Spatial Analysis & GIS Offered intermittently. Prereq., GPHY 284 or Consent of Instructor. Coreq., GPHY 489. Quantitative analysis of spatial data, including techniques for pattern analysis, classification, and interpolation within a GIS environment.	3 Credits
	GPHY 485 - Internet GIS Offered intermittently. Prereq., GPHY 284 or FORS 250 or Consent of Instructor. Principles and techniques for distributing GIS and mapping applications through the Internet. Students need to register for a required linked lab section.	3 Credits
	GPHY 486 - Transport, Planning & GIS Offered intermittently during wintersession (2 credits) or spring semester (3 credits.) Coreq., GPHY 489. A project-oriented course focusing on patterns and trends in urban passenger transportation, principles of transport planning, and modeling in GIS-T. To succeed in this course students should have comfort with basic algebra and statistics.	3 Credits

	GPHY 487 - Remote Sensing/Raster GIS Offered autumn. Prereq. or coreq., GPHY 284 or FORS 250 or Consent of Instructor. Coreq., GPHY 489. Basic principles of remote sensing and analyzing images within a raster GIS. Review current data sources.	3 Credits
	GPHY 488 - Thematic Cartography & GIS Offered spring. Prereq., GPHY 284 or GPHY 381 or FORS 250 or Consent of Instructor. Application of GIS for managing natural and cultural resources. Covers choropleth maps, dot maps, proportional figure maps, isarithmic maps, and others. Includes computer mapping and GIS exercises. Students need to register for a required linked lab section.	3 Credits
	GPHY 489 - Cartography/GIS Laboratory (R-4) Offered autumn and spring. Prereq., or coreq., GPHY 482, 486 or 487. Lab to accompany cartography and GIS courses.	1 Credits
	GPHY 497 - Workshop in Teaching Geography Offered intermittently. Concepts and techniques in geography, with emphasis on their use in teaching geography in Montana schools. Students are required to prepare and present a teaching unit project. Designed for pre-service or in-service teachers.	2 To 3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Psychology

Rule: May complete 9 credits

Note: PSYX 191, 192, 290, 291, 292, 390, 391, 392, and 491 may apply to this requirement depending on the course content.

	Course	**Credits**
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	PSYX 105 - Careers in Psychology Offered intermittently. Exploration of the various careers available in the general area of mental health research and practice.	1 Credits
	PSYX 120 - Research Methods I Offered every term. Prereq., PSYX 100S. Experimental and other quantitative methods employed in the scientific study of behavior.	3 Credits
	PSYX 161S - Fund of Organizational Psych Offered intermittently. Foundation in the psychological processes that influence behavior of people in organizational settings.	3 Credits
	PSYX 222 - Psychological Statistics Offered every term. Prereq., PSYX 120; M 115, M 162 or 171. Application of statistical techniques to psychological data. Credit not allowed for both PSYX 222 and SOCI 202.	3 Credits

	PSYX 230 - Developmental Psychology Offered autumn, spring, summer. Prereq., PSYX 100S. The study of human physical, cognitive and psychosocial development throughout the life span. Content covers major theories, the influence of genetics, and the environment from a chronological aspect. Appropriate for Social Work, Nursing, Addiction Studies, Education, and Psychology.	3 Credits
	PSYX 233 - Fund of Psychology of Aging Offered every term. An overview of theories and research findings in the psychology of adulthood and aging.	3 Credits
	PSYX 238 - Adolescent Psychology Offered every term. PreReq., PSYX 100S or PSYX 230S. This course is designed to provide an introduction to the physical, social, emotional, and cognitive developmental changes that occur during adolescence, as well as their relationships and cultural influences. Appropriate for students in Addiction Studies, Psychology, Social Work, Education, and other disciplines where a study of the adolescent is desired.	3 Credits
	PSYX 240 - Fund of Abnormal Psychology Offered every term. Prereq., PSYX 100. This course provides a broad introduction to abnormal psychology, which includes defining abnormality, examining the history of abnormal psychology, identifying how abnormal psychology relates to other disciplines in psychology, exploring major research methods used in abnormal psychology, discussing various mental illnesses and their potential causes and possible treatments, and applying major abnormal psychological findings to practical problems.	3 Credits
	PSYX 250N - Fund of Biological Psychology Offered every term. Prereq., PSYX 100S. Introduction to the study of how psychological processes are supported by biological processes. Mechanisms across levels of analysis, from cells to individuals, are addressed.	3 Credits
	PSYX 270 - Fund Psychology of Learning Offered autumn. Prereq., PSYX 100S. Basic theory and research on the nature of animal learning and behavior.	3 Credits
	PSYX 280 - Fund of Memory and Cognition Offered intermittently. Prereq., PSYX 100S. The acquisition and uses of knowledge. An examination of research and theories of human learning, memory, and thinking.	3 Credits
	PSYX 320 - Research Methods III Offered every term. Prereq., PSYX 222. An appreciation of the experimental approach to the scientific study of behavior through student-conducted experiments.	3 Credits
	PSYX 339 - Curr Tpcs/Development Psyc Offered intermittently. Prereq., PSYC 240S or 245. Topical reviews of theories, research and applications in developmental psychology.	3 Credits
	PSYX 340 - Abnormal Psychology Offered every term. Prereq., PSYX 100S. Description and classification of abnormal behavior.	3 Credits

	PSYX 345 - Child & Adolescent Psych Dis Offered intermittently. Prereq., PSYX 100S and 230. Study of causes, characteristics, assessment and treatment of emotional, social and intellectual disorders. The age span studied will range from infancy through adolescence.	3 Credits
	PSYX 348 - Psychology of Family Violence Offered spring. Prereq., PSYX 100S. Same as WGS 385. Exploration of theoretical explanations for the presence of violence in American families; research and interventions in such areas as child physical and sexual abuse, battering of women, marital rape, spousal homicide, etc.	3 Credits
	PSYX 352 - Comparative Psychology Offered autumn. Prereq., PSYX 250N. Advanced evaluation and analysis of animal behavior through the synthesis of theory, research, and methods found in comparative psychology, behavioral biology, ethology, and sociobiology.	3 Credits
	PSYX 356 - Human Neuropsychology Offered spring. Prereq., PSYX 250N. Study of the organization of the nervous system, functional neuroanatomy, neuropathology, neurological disorders, behavioral neurology, and clinical neuropsychology.	3 Credits
	PSYX 360 - Social Psychology Offered every term. Individual behavior as a function of interpersonal interaction.	3 Credits
	PSYX 362 - Multicultural Psychology Offered autumn even-numbered years. Current theories and research on culture, race, and ethnicity, and how the sociocultural context influences psychological processes.	3 Credits
	PSYX 376 - Prin Cognit Behav Mod Offered intermittently. Prereq., PSYX 270S. Study of basic principles, assumptions, methodology and applications of behavior modification. Discussion of current literature relevant to behavioral assessment and treatment of major psychological disorders.	3 Credits
	PSYX 377 - Personalized Student Instr Offered every term. Prereq., consent of instr. Experience with the personalized student instruction method of teaching, gained through participating as a proctor in the introductory psychology course.	3 Credits
	PSYX 378 - Intro to Clinical Psyc Offered intermittently. Prereq., PSYX 340. Clinical psychology as a science and a profession. Theoretical models and techniques of assessment and intervention. Case illustrations.	3 Credits
	PSYX 385 - Psychology of Personality Offered intermittently Prereq., PSYX 100S. Introduction to theories and research in personality. Intensive survey of theoretical concepts and a detailed examination of experimental methods and experiments in the field of personality.	3 Credits

	PSYX 400 - History & System in Psychology Offered every term. Prereq., 15 credits in psychology. Origin and development of basic concepts and methods in scientific psychology.	3 Credits
	PSYX 435 - Clinic Topic Rural Bioethics Offered autumn. The class focuses on ethical issues that emerge and complicate decision making when providing health care and human services in rural settings.	3 Credits
	PSYX 436 - Ethical Foundation Qual Impov Offered intermittently. The class focuses on ethical issues that emerge and complicate decision making when developing and implementing quality assessment and improvement activities.	3 Credits
	PSYX 437 - Intro Emp Research Bioethics Offered spring. The class focuses on ethical issues that emerge when developing research protocols and conducting multi-method empirical research in rural settings.	3 Credits
	PSYX 438 - Bioethics Health Policy Offered summer. The class focuses on ethical issues that emerge and complicate decision making when developing, implementing, and assessing the efficacy of health and human service policies in rural and underserved settings.	3 Credits
	PSYX 442 - Counseling Theories in Context Offered autumn. Prereq., PSYX 100S. Same as COUN 485 and SW 485. This course introduces students to the primary theories that constitute the intellectual foundation for common counseling and psychotherapy techniques, with a special focus on gender, interpersonal influence strategies and diversity issues.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Sociology

Rule: May complete 9 credits

Note: SOCI 191, 291, 391, 491, and 492 may apply to this requirement depending on the course content.

	Course	Credits
	SOCI 101S - Introduction to Sociology Offered every term. Overview of the principles and concepts used in the study of human social interaction, groups, communities and societies. Required of all majors.	3 Credits
	SOCI 130S - Soc of Alternative Religions Offered spring. Unconventional religious groups in American society. Topics include recruitment, conversion, commitment, defection, leadership, belief systems, organizational structure and change.	3 Credits

	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	SOCI 211S - Introduction to Criminology Offered autumn. A critical examination of crime in society: how crime is defined, the extent and distribution of crime, theoretical explanations of criminal behavior, and crime control efforts.	3 Credits
	SOCI 212S - Social Issues Southeast Asia Offered every other year. Introduction to the cultures, societies, and contemporary social problems of Southeast Asia.	3 Credits
	SOCI 220S - Race, Gender & Class Offered autumn. Same as WGS 220S. Analysis of the intersecting structure and dynamics of race, gender and class. Focus on power relationships, intergroup conflict and minority-group status.	3 Credits
	SOCI 221 - Criminal Justice System Offered spring. A systematic survey of crime and the administration of justice in the United States, including the organizational structures, processes, and dynamics of law enforcement, criminal adjudication, and corrections.	3 Credits
	SOCI 270 - Intro Development Sociology Offered autumn. Introduction to sociological perspectives on international development, globalization, and sustainability. Rural and environmental issues emphasized.	3 Credits
	SOCI 275S - Gender and Society Offered spring. Exploration of the social construction of gender, especially in western, post-industrial societies such as the U.S.; gender ideologies affect the social definition and position of gendered individuals in work, family, sexual relationships, gendered divisions of labor, and social movements.	3 Credits
	SOCI 306 - Sociology of Work Offered intermittently. An introduction to contemporary sociological debates on work including overwork, working poor, housework, globalization, mechanization, routinization, surveillance, and unions. Special focus on gender and class impacts on working life.	3 Credits
	SOCI 308 - Soc of Education Offered intermittently. Prereq., SOCI 101S. The structure and operation of the educational system in the United States, with special attention to the organization and effectiveness of schools.	3 Credits
	SOCI 312 - Criminal Adjudication Offered spring odd-numbered years. Prereq., SOCI 101S, 221 and either 211S or 330. An examination of adjudicatory processes applied to the criminally accused. Includes pretrial, trial, and sentencing practices and procedures. Special attention to the sociological dimensions of criminal adjudication: its cultural underpinnings, structural characteristics and interactional dynamics.	3 Credits

	SOCI 314 - Extraordinary Group Behavior Offered intermittently. Prereq., SOCI 101S. The study of emergent social behavior including rumors, crowds, crazes, riots, panics, terrorism, revolutions and social movements.	3 Credits
	SOCI 318 - Sociological Research Methods Offered every term. Prereq., SOCI 101S, Sociology majors only, or consent of instr. Methods of research in the social sciences including naturalistic observation, interviewing, measurement, experiments, surveys, content analysis, and basic data analysis. Required of all majors.	3 Credits
	SOCI 325 - Social Stratification Offered intermittently. Prereq., SOCI 101S or SOCI 220S or SOCI 275S. The origins, institutionalization and change of class, status, prestige, power and other forms of social inequality. Special attention to the effects of stratification on individuals.	3 Credits
	SOCI 330 - Juvenile Delinquency Offered spring. Prereq., SOCI 101S. The study of juvenile delinquency as a social phenomenon, including the emergence of "juvenile delinquency" as a social and legal concept, the nature of delinquency, and theoretical explanations of delinquent behavior.	3 Credits
	SOCI 332 - Sociology of the Family Offered autumn. Prereq., SOCI 101S. Historical, cross-cultural, and analytical study of the family. Emphasis on ideology, social structures, and agency affecting family composition and roles.	3 Credits
	SOCI 335 - Juvenile Justice System Offered autumn. Prereq., SOCI 101S and 211S or 330. An analysis of the juvenile justice system in the United States, including the historical development of policies and practices. The role of various social agencies in defining, preventing, and responding to delinquency.	3 Credits

	SOCI 485 - Political Sociology Offered spring odd-numbered years. Prereq., junior or senior standing. Analysis of power; states; institutional interrelationships; production and transmisison of ideologies; political participation and membership; social movements.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Education Methods

Rule: Complete the following course.

Note: The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Methods: 5-12 Social Studies.

	Course	**Credits**

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits

History Advanced Writing Courses

Rule: Must choose one of the following courses:

	Course	Credits
	HSTA 415 - The Black Radical Tradition Offered intermittently. Same as HSTA 415. Prereq., HSTR 200 and only open to majors and minors in history or consent of instructor. From slave revolts through to the Move rebellion in Philadelphia, this course examines how the African-American community has engaged in radical efforts to change the status quo in the name of seeking justice.	3 Credits
	HSTA 417 - Prayer & Civil Rights (AM) Same as HSTA 417. HSTR 200 and only open to majors and minors in history or consent of instructor. This course explores the meaning of public prayer in the Civil Rights Movement. Built around the question, "Does religion help or hinder the pursuit of social change?" this class combines historical and religious studies inquiry to trace changes in civil rights activists' efforts to make use of religion. By focusing on a particular religious practice - in this case prayer - in a specific, but limited period of time, this course challenges students to consider how meaning is formed through historical action and study the social significance of religious practice. This formed through historical action and study the social significance of religious practice. This course complicates prevailing ideas about the normalcy of African-American religious practitioners' prayer, invites students to examine their assumptions about the nature of prayer, and traces how religion spilled out of sanctuaries into the streets during the civil rights era.	3 Credits
	HSTA 422 - U.S. After WWII: Research Sem (AM) Prereq. HSTR 200. Enrollment for history majors and minors , graduate students in history, or by consent of the instructor. This course offers students an opportunity to do original research and produce an article-length research paper on a topic in post-war American history. It meets the department’s requirement of an upper-level research seminar as well as the upper-division writing expectation in the major.	3 Credits
	HSTA 461 - Research in Montana History (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. This course is a research and writing seminar in Montana history. Students will learn advanced research methodology in history and will be exposed to a variety of databases and source collections in Montana history that are available locally and online. Students will research and write a primary-source based paper on a topic in Montana history. This course fulfills the upper-division writing requirement for the history department and the university.	3 Credits
	HSTA 471 - Writing Women's Lives (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Consent of instructor required. Upper-division writing-intensive seminar in women’s history. Students will write an original research paper based on primary source materials.	3 Credits

	HSTR 400 - Historical Research Seminar Prereq., HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Topics vary according to the instructor. The goal of this course is for students to propose and execute a substantial research project. Upper division writing course for the history major.	3 Credits
	HSTR 418 - Britain 1500 - 1800 (EU) Prereq., HSTR 200. Recommended HSTR 348 or 349. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Students will discuss specific issues in the historiography of the early modern period in British history (c1500-1800) and produce research papers grounded in primary sources.	3 Credits
	HSTR 437 - US-Latin America Relations (WRLD) Prereq., HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Research and writing seminar on U.S.-Latin American relations from the late 18th century through the 20th century.	3 Credits

American History Electives

Rule: Choose at least 9 credits from the following courses

	Course	Credits
	AAST 141H - Black: Africa to Hip-Hop Offered autumn. Same as HIST 141H. This course introduces students to the primary questions, themes, and approaches to African-American Studies. In addition to examining key historical periods such as Reconstruction, the Harlem Renaissance, and the Civil Rights era, students will encounter Hip-Hop, African-American film, African-American religion, and contemporary identity politics. This course concludes by discussing the reasons for and new directions in African-American studies, including diaspora studies, Pan-Africanism, and post-colonial studies. Overall students will gain new insight into the social, cultural, political, and intellectual, experiences of a diverse people and into the history and contemporary experience of the United States.	3 Credits
	AAST 208H - Discovering Africa Offered intermittently. Same as HIST 208H. Interdisciplinary study of the history of pre-colonial Africa, focusing on social, economic, political and cultural institutions and traditions including the wealth, diversity and complexity of ancient and classical African civilizations and cultures.	3 Credits
	HSTA 191 - Special Topics (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	HSTA 255 - Montana History (AM) Offered autumn. An introductory and interpretive history from Lewis and Clark to 2000.	3 Credits
	HSTA 262 - Abolitionism (AM) Same as AAS 262. Interdisciplinary, historical perspective on early 19th century movement to abolish slavery and racial discrimination in the United States.	3 Credits

	HSTA 291 - Special Topics (R-12) (AM) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	HSTA 311 - Early America (AM) Emphasis changes from year to year. Can touch upon the political economy of Puritanism, through gender and family to the preconditions for the American Revolution.	3 Credits
	HSTA 315 - Early American Republic (AM) Democracy, nationalism and sectionalism, the War of 1812, the second party system, social order and disorder, the capitalist revolution.	3 Credits
	HSTA 316 - American Civil War Era (AM) Civil War and Reconstruction; the triumph of the industrialist and capitalist ethic.	3 Credits
	HSTA 320 - Birth of Modern US (AM) The history of the U.S. from 1877 to 1920 is largely the story of Americans responding to profound social, cultural and economic change. In an effort to bring order to their changing world, Americans created new institutions, retooled their ideologies, and improved the nation's infrastructure. The order they created is, in modified form, still with us today. Students will explore the myriad changes that transformed the United States during this period and study the social, political, and cultural struggles that shaped the emergence of Modern America.	3 Credits
	HSTA 321 - America in Crisis (AM) This era in U.S. history was marked by a series of crises: the contested transition to modernity during the 1920s, the Great Depression, and World War II and its aftermath. This course will explore how Americans responded to these crises, why they responded to them the way they did, and how their responses altered the society in which they lived.	3 Credits
	HSTA 322 - American History: WWII to Pres (AM) The Cold War and its consequences, the civil rights revolution, affluence and anxiety, counter-culture, political radicalism, feminism, the Nixon years, Watergate and after.	3 Credits
	HSTA 323 - U.S. in the 1950s (AM) Examines the political, social, cultural, intellectual developments of America in the 1950s. Particular emphasis is placed on cultural history.	3 Credits
	HSTA 324 - U.S. in the 1960s (AM) Examines the political, social, cultural, intellectual developments of America in the 1960s. Topics include the Great Society, political radicalism, the counter culture, black radicalism, and Vietnam.	3 Credits
	HSTA 333 - Key Events in American Militar (R-6) (AM) The French and Indian Wars to Vietnam and beyond; chronological and topical accounts.	3 Credits
	HSTA 335 - Movie America (AM) This course examines major topics and themes in United States history from the early twentieth century to the present using movies as primary sources.	3 Credits

	HSTA 342H - Afr Amer Hist to 1865 (AM) Offered intermittently. Same as AAS 342H. Survey of the African American experience from the African background to the end of the Civil War. Focus on Black American quest for the American Dream, and how Blacks attempted to deal with the challenges of enslavement and racism.	3 Credits
	HSTA 343H - Afr Amer Hist Since 1865 (AM) Same as AAS 343H. Study of the African American experience since the Civil War. Change and continuity in the African American experience, the fight against Jim Crow, the struggle for civil rights, and post-civil rights economic, political, social and cultural developments and challenges.	3 Credits
	HSTA 347 - Voodoo, Muslim, Church (AM) The African American religious experience encompasses Islam, Christianity, Santeria, voodoo, and many others. In this course, students will examine the history of religious expression within the African-American community from the colonial era through the twentieth century. Central to the course question, "How did religion shape the experience of the African-American community?" Students will also examine the ways in which religious practice influenced social, political, and cultural changes in American history. Same as AAS 347.	3 Credits
	HSTA 354X - Ind MT Since Reserv Era (AM) Offered autumn odd-numbered years. Same as ANTH 324X and NAS 324X. Examination of the history of Montana Indians since the establishment of the reservations, contemporary conditions, and issues among both reservation and non-reservation Indian communities in the state. Special attention given to social and economic conditions, treaty rights, tribal sovereignty, and legal issues.	3 Credits
	HSTA 361 - The American South (AM) Social history of the American South with particular attention to race, class, and gender.	3 Credits
	HSTA 370H - Wmn Amer Colonial to Civil War Offered autumn. Interpretive overview of major themes and events in U.S. womens history to 1865. Same as WGS 370H.	3 Credits
	HSTA 371H - Wmn Amer Civil War to Present Offered spring. Interpretive overview of major themes and events in U.S. women's history from 1865 to the present. Same as WGS 371.	3 Credits
	HSTA 372 - The American Revolution (AM) Delving into the history of the early modern Atlantic world, this course examines the transnational ramifications of the American Revolution. Specifically, it examines the Revolution's economic and ideological origins, European involvement in the Revolutionary War, as well as the Revolution's impact on African American slavery and the slave trade. We will also consider its implications for Haitian and Latin American independence. And finally, we will discuss the creation of the U.S. Constitution, America's struggle for political sovereignty, and the Revolution's impact on Native Americans, women and families, and conceptions of American identity during the Early National period.	3 Credits

	HSTA 380 - AmericanConstitutional History (AM) An examination of major issues in the American constitutional past. Topics include the creation of the U.S. Constitution and the problem of ? original intent,? courts and judicial review, slavery and anti-slavery, the bill o frights, industrial capitalism and the welfare state, and majority rule and minority rights in American democracy.	3 Credits
	HSTA 382H - History of American Law (AM) Issues in the social history of law from the colonial period to the present.	3 Credits
	HSTA 385 - Families & Children in America (AM) Historical overview of families and children in the United States from the colonial era to the present. Topics include changing patterns of family life, the evolution of attitudes toward children and youth, the relationship between the American family and the nation-state, and debates over "family values" from the nation's founding to the present.	3 Credits
	HSTA 391 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	HSTA 415 - The Black Radical Tradition Offered intermittently. Same as HSTA 415. Prereq., HSTR 200 and only open to majors and minors in history or consent of instructor. From slave revolts through to the Move rebellion in Philadelphia, this course examines how the African-American community has engaged in radical efforts to change the status quo in the name of seeking justice.	3 Credits
	HSTA 417 - Prayer & Civil Rights (AM) Same as HSTA 417. HSTR 200 and only open to majors and minors in history or consent of instructor. This course explores the meaning of public prayer in the Civil Rights Movement. Built around the question, "Does religion help or hinder the pursuit of social change?" this class combines historical and religious studies inquiry to trace changes in civil rights activists' efforts to make use of religion. By focusing on a particular religious practice - in this case prayer - in a specific, but limited period of time, this course challenges students to consider how meaning is formed through historical action and study the social significance of religious practice. This formed through historical action and study the social significance of religious practice. This course complicates prevailing ideas about the normalcy of African-American religious practitioners' prayer, invites students to examine their assumptions about the nature of prayer, and traces how religion spilled out of sanctuaries into the streets during the civil rights era.	3 Credits
	HSTA 422 - Research: U.S. After WWII (AM) Prereq. HSTR 200. Enrollment for history majors and minors , graduate students in history, or by consent of the instructor. This course offers students an opportunity to do original research and produce an article-length research paper on a topic in post-war American history. It meets the department’s requirement of an upper-level research seminar as well as the upper-division writing expectation in the major.	3 Credits

	HSTA 461 - Research in Montana History (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. This course is a research and writing seminar in Montana history. Students will learn advanced research methodology in history and will be exposed to a variety of databases and source collections in Montana history that are available locally and online. Students will research and write a primary-source based paper on a topic in Montana history. This course fulfills the upper-division writing requirement for the history department and the university.	3 Credits
	HSTA 471 - Writing Women's Lives (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Consent of instructor required. Upper-division writing-intensive seminar in women's history. Students will write an original research paper based on primary source materials.	3 Credits
	HSTA 491 - Special topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.	1 To 12 Credits
	HSTA 494 - Seminar (R-6) Consent of instructor.	1 To 6 Credits
	HSTR 364 - Environmental History (AM) Prereq., lower-division course in Perspective 5 or consent of instr. A history of the human-nature interaction in the United States.	3 Credits
	HSTR 367 - 19th Cent Amer West (AM) Euro-American movement and conflict in the nineteenth century trans-Mississippi west.	3 Credits
	HSTR 369 - 20th Cent Amer West (AM) The contemporary trans-Mississippi West.	3 Credits
	NASX 464 - Hist Amer Indian Affrs to 1776 Offered Autumn. Same as HIST 464. A study of American Indian relations with Europeans and the United States from first contact to 1776.	3 Credits
	NASX 465 - Hist Amer Indian Affrs 10 Cent Offered Spring. Same as HIST 465. A study of tribal encounters and adjustments to the American nations in the nineteenth century.	3 Credits
	NASX 466 - Hist of Indian Affrs from 1890 Offered Autumn. Same as HIST 466. A study of tribal encounters and adjustments to the American nation from 1890.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

World History Electives

Rule: Choose at least 9 credits from the following courses

	Course	**Credits**

	ANTY 141H - The Silk Road Offered autumn and spring. Introduction to the study of the human communities, cultures, and economies in Central and Southwest Asia along the ancient four thousand mile-long Silk Road.	3 Credits

History Advanced Writing Courses

Rule: Must choose one of the following courses:

	Course	Credits
	HSTA 415 - The Black Radical Tradition Offered intermittently. Same as HSTA 415. Prereq., HSTR 200 and only open to majors and minors in history or consent of instructor. From slave revolts through to the Move rebellion in Philadelphia, this course examines how the African-American community has engaged in radical efforts to change the status quo in the name of seeking justice.	3 Credits
	HSTA 417 - Prayer & Civil Rights (AM) Same as HSTA 417. HSTR 200 and only open to majors and minors in history or consent of instructor. This course explores the meaning of public prayer in the Civil Rights Movement. Built around the question, "Does religion help or hinder the pursuit of social change?" this class combines historical and religious studies inquiry to trace changes in civil rights activists' efforts to make use of religion. By focusing on a particular religious practice - in this case prayer - in a specific, but limited period of time, this course challenges students to consider how meaning is formed through historical action and study the social significance of religious practice. This formed through historical action and study the social significance of religious practice. This course complicates prevailing ideas about the normalcy of African-American religious practitioners' prayer, invites students to examine their assumptions about the nature of prayer, and traces how religion spilled out of sanctuaries into the streets during the civil rights era.	3 Credits
	HSTA 422 - U.S. After WWII: Research Sem (AM) Prereq. HSTR 200. Enrollment for history majors and minors , graduate students in history, or by consent of the instructor. This course offers students an opportunity to do original research and produce an article-length research paper on a topic in post-war American history. It meets the department’s requirement of an upper-level research seminar as well as the upper-division writing expectation in the major.	3 Credits

	HSTA 461 - Research in Montana History (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. This course is a research and writing seminar in Montana history. Students will learn advanced research methodology in history and will be exposed to a variety of databases and source collections in Montana history that are available locally and online. Students will research and write a primary-source based paper on a topic in Montana history. This course fulfills the upper-division writing requirement for the history department and the university.	3 Credits
	HSTA 471 - Writing Women's Lives (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Consent of instructor required. Upper-division writing-intensive seminar in women's history. Students will write an original research paper based on primary source materials.	3 Credits
	HSTR 400 - Historical Research Seminar Prereq., HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Topics vary according to the instructor. The goal of this course is for students to propose and execute a substantial research project. Upper division writing course for the history major.	3 Credits
	HSTR 418 - Britain 1500 - 1800 (EU) Prereq., HSTR 200. Recommended HSTR 348 or 349. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Students will discuss specific issues in the historiography of the early modern period in British history (c1500-1800) and produce research papers grounded in primary sources.	3 Credits
	HSTR 437 - US-Latin America Relations (WRLD) Prereq., HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Research and writing seminar on U.S.-Latin American relations from the late 18th century through the 20th century.	3 Credits

History Minor

Minor - History (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 20

Required Cumulative GPA: 2.0

Note: A minimum of 20 credits in History are required of which 6 credits must be in American (AM) History, 6 must be in European (EU) History, and 6 in World (WRLD) History (Asian, Islamic, African, Latin American or international). History minors must complete at least 9 upper-division credits.

Introductory History Courses

Rule: Must complete 2 of the following courses

Note: These courses count toward the American, World, and European electives.
AP Policy: Those students scoring a "5" on either the American History or European History AP exam are excused from this requirement. These students earn credit toward graduation but do not earn credit toward the history degree.

	Course	Credits
	HSTA 101H - American History I (AM) Offered autumn. A comprehensive introductory history of Colonial, Revolutionary and 19th century America, to 1877. Lecture-discussion. Credit not allowed for both 101H and 103H.	4 Credits
	HSTA 102H - American History II (AM) Offered spring. A comprehensive introductory history of the U.S. since 1877. Lecture-discussion. Credit not allowed for both HSTA 102H and 104H.	4 Credits
	HSTA 103H - Honors American History I (AM) Offered autumn. Enrollment by consent of instructor. A comprehensive introductory history of Colonial, Revolutionary, and 19th century America, to 1877. Lecture-honors discussion. Credit not allowed for both 103H and 101H.	4 Credits
	HSTA 104H - Honors American History II (AM) Offered spring. Enrollment by consent of instructor. A comprehensive introductory history of the U. S. since 1877. Lecture-honors discussion. Credit not allowed for both HSTA 102H and 104H.	4 Credits
	HSTR 101H - Western Civilization I (EU) Offered autumn. A comprehensive, introductory history of western civilization from classical antiquity to 1648. Lecture-discussion. Credit not allowed for both 101H and 103H.	4 Credits
	HSTR 102H - Western Civilization II (EU) Offered spring. A comprehensive, introductory history of western civilization from 1648 to the present. Lecture-discussion. Credit not allowed for both HSTR 102H and 104H.	4 Credits
	HSTR 103H - Honors Western Civilization I (EU) Offered autumn. Limited enrollment by consent of instr. only. A comprehensive, introductory history of western civilization from classical antiquity to 1648. Lecture-honors discussion. Credit not allowed for both 103H and 101H.	4 Credits
	HSTR 104H - Honors Western Civilization II (EU) Offered spring. Limited enrollment by consent of instructor only. A comprehensive introductory history of western civilization from 1648 to the present. Lecture-honors discussion. Credit not allowed for both HSTR 102H and 104H.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

American History Electives

Rule: Must choose 6 credits from the following

	Course	Credits

	AAST 141H - Black: Africa to Hip-Hop Offered autumn. Same as HIST 141H. This course introduces students to the primary questions, themes, and approaches to African-American Studies. In addition to examining key historical periods such as Reconstruction, the Harlem Renaissance, and the Civil Rights era, students will encounter Hip-Hop, African-American film, African-American religion, and contemporary identity politics. This course concludes by discussing the reasons for and new directions in African-American studies, including diaspora studies, Pan-Africanism, and post-colonial studies. Overall students will gain new insight into the social, cultural, political, and intellectual, experiences of a diverse people and into the history and contemporary experience of the United States.	3 Credits
	AAST 208H - Discovering Africa Offered intermittently. Same as HIST 208H. Interdisciplinary study of the history of pre-colonial Africa, focusing on social, economic, political and cultural institutions and traditions including the wealth, diversity and complexity of ancient and classical African civilizations and cultures.	3 Credits
	HSTA 101H - American History I (AM) Offered autumn. A comprehensive introductory history of Colonial, Revolutionary and 19th century America, to 1877. Lecture-discussion. Credit not allowed for both 101H and 103H.	4 Credits
	HSTA 102H - American History II (AM) Offered spring. A comprehensive introductory history of the U.S. since 1877. Lecture-discussion. Credit not allowed for both HSTA 102H and 104H.	4 Credits
	HSTA 103H - Honors American History I (AM) Offered autumn. Enrollment by consent of instructor. A comprehensive introductory history of Colonial, Revolutionary, and 19th century America, to 1877. Lecture-honors discussion. Credit not allowed for both 103H and 101H.	4 Credits
	HSTA 104H - Honors American History II (AM) Offered spring. Enrollment by consent of instructor. A comprehensive introductory history of the U. S. since 1877. Lecture-honors discussion. Credit not allowed for both HSTA 102H and 104H.	4 Credits
	HSTA 191 - Special Topics (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	HSTA 255 - Montana History (AM) Offered autumn. An introductory and interpretive history from Lewis and Clark to 2000.	3 Credits
	HSTA 262 - Abolitionism (AM) Same as AAS 262. Interdisciplinary, historical perspective on early 19th century movement to abolish slavery and racial discrimination in the United States.	3 Credits
	HSTA 291 - Special Topics (R-12) (AM) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits

	HSTA 311 - Early America (AM) Emphasis changes from year to year. Can touch upon the political economy of Puritanism, through gender and family to the preconditions for the American Revolution.	3 Credits
	HSTA 315 - Early American Republic (AM) Democracy, nationalism and sectionalism, the War of 1812, the second party system, social order and disorder, the capitalist revolution.	3 Credits
	HSTA 316 - American Civil War Era (AM) Civil War and Reconstruction; the triumph of the industrialist and capitalist ethic.	3 Credits
	HSTA 320 - Birth of Modern US (AM) The history of the U.S. from 1877 to 1920 is largely the story of Americans responding to profound social, cultural and economic change. In an effort to bring order to their changing world, Americans created new institutions, retooled their ideologies, and improved the nation's infrastructure. The order they created is, in modified form, still with us today. Students will explore the myriad changes that transformed the United States during this period and study the social, political, and cultural struggles that shaped the emergence of Modern America.	3 Credits
	HSTA 321 - America in Crisis (AM) This era in U.S. history was marked by a series of crises: the contested transition to modernity during the 1920s, the Great Depression, and World War II and its aftermath. This course will explore how Americans responded to these crises, why they responded to them the way they did, and how their responses altered the society in which they lived.	3 Credits
	HSTA 322 - American History: WWII to Pres (AM) The Cold War and its consequences, the civil rights revolution, affluence and anxiety, counter-culture, political radicalism, feminism, the Nixon years, Watergate and after.	3 Credits
	HSTA 323 - U.S. in the 1950s (AM) Examines the political, social, cultural, intellectual developments of America in the 1950s. Particular emphasis is placed on cultural history.	3 Credits
	HSTA 324 - U.S. in the 1960s (AM) Examines the political, social, cultural, intellectual developments of America in the 1960s. Topics include the Great Society, political radicalism, the counter culture, black radicalism, and Vietnam.	3 Credits
	HSTA 333 - Key Events in American Militar (R-6) (AM) The French and Indian Wars to Vietnam and beyond; chronological and topical accounts.	3 Credits
	HSTA 335 - Movie America (AM) This course examines major topics and themes in United States history from the early twentieth century to the present using movies as primary sources.	3 Credits

	HSTA 342H - Afr Amer Hist to 1865 (AM) Offered intermittently. Same as AAS 342H. Survey of the African American experience from the African background to the end of the Civil War. Focus on Black American quest for the American Dream, and how Blacks attempted to deal with the challenges of enslavement and racism.	3 Credits
	HSTA 343H - Afr Amer Hist Since 1865 (AM) Same as AAS 343H. Study of the African American experience since the Civil War. Change and continuity in the African American experience, the fight against Jim Crow, the struggle for civil rights, and post-civil rights economic, political, social and cultural developments and challenges.	3 Credits
	HSTA 347 - Voodoo, Muslim, Church (AM) The African American religious experience encompasses Islam, Christianity, Santeria, voodoo, and many others. In this course, students will examine the history of religious expression within the African-American community from the colonial era through the twentieth century. Central to the course question, "How did religion shape the experience of the African-American community?" Students will also examine the ways in which religious practice influenced social, political, and cultural changes in American history. Same as AAS 347.	3 Credits
	HSTA 354X - Ind MT Since Reserv Era (AM) Offered autumn odd-numbered years. Same as ANTH 324X and NAS 324X. Examination of the history of Montana Indians since the establishment of the reservations, contemporary conditions, and issues among both reservation and non-reservation Indian communities in the state. Special attention given to social and economic conditions, treaty rights, tribal sovereignty, and legal issues.	3 Credits
	HSTA 358 - Images of the Amer West (AM) Offered even-numbered years. The roles that artists, artistic works and illustrations, and symbolic images have played in the history of the American West.	3 Credits
	HSTA 361 - The American South (AM) Social history of the American South with particular attention to race, class, and gender.	3 Credits
	HSTA 370H - Wmn Amer Colonial to Civil War Offered autumn. Interpretive overview of major themes and events in U.S. womens history to 1865. Same as WGS 370H.	3 Credits
	HSTA 371H - Wmn Amer Civil War to Present Offered spring. Interpretive overview of major themes and events in U.S. women's history from 1865 to the present. Same as WGS 371.	3 Credits

	HSTA 372 - The American Revolution (AM) Delving into the history of the early modern Atlantic world, this course examines the transnational ramifications of the American Revolution. Specifically, it examines the Revolution's economic and ideological origins, European involvement in the Revolutionary War, as well as the Revolution's impact on African American slavery and the slave trade. We will also consider its implications for Haitian and Latin American independence. And finally, we will discuss the creation of the U.S. Constitution, America's struggle for political sovereignty, and the Revolution's impact on Native Americans, women and families, and conceptions of American identity during the Early National period.	3 Credits
	HSTA 380 - AmericanConstitutional History (AM) An examination of major issues in the American constitutional past. Topics include the creation of the U.S. Constitution and the problem of ? original intent,? courts and judicial review, slavery and anti-slavery, the bill o frights, industrial capitalism and the welfare state, and majority rule and minority rights in American democracy.	3 Credits
	HSTA 382H - History of American Law (AM) Issues in the social history of law from the colonial period to the present.	3 Credits
	HSTA 385 - Families & Children in America (AM) Historical overview of families and children in the United States from the colonial era to the present. Topics include changing patterns of family life, the evolution of attitudes toward children and youth, the relationship between the American family and the nation-state, and debates over "family values" from the nation's founding to the present.	3 Credits
	HSTA 391 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	HSTA 491 - Special topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.	1 To 12 Credits
	HSTA 494 - Seminar (R-6) Consent of instructor.	1 To 6 Credits
	HSTR 364 - Environmental History (AM) Prereq., lower-division course in Perspective 5 or consent of instr. A history of the human-nature interaction in the United States.	3 Credits
	HSTR 367 - 19th Cent Amer West (AM) Euro-American movement and conflict in the nineteenth century trans-Mississippi west.	3 Credits
	HSTR 369 - 20th Cent Amer West (AM) The contemporary trans-Mississippi West.	3 Credits
	NASX 464 - Hist Amer Indian Affrs to 1776 Offered Autumn. Same as HIST 464. A study of American Indian relations with Europeans and the United States from first contact to 1776.	3 Credits

	NASX 465 - Hist Amer Indian Affrs 10 Cent Offered Spring. Same as HIST 465. A study of tribal encounters and adjustments to the American nations in the nineteenth century.	3 Credits
	NASX 466 - Hist of Indian Affrs from 1890 Offered Autumn. Same as HIST 466. A study of tribal encounters and adjustments to the American nation from 1890.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

World History Electives

Rule: Must choose 6 credits from the following

History Education

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

Students may earn a teaching major in history by completing the requirements for the BA in history, to include the following: HSTA 101 or 102; HSTR 101 or 102; HSTR 200; HSTA 255; 9 credits in world history; 6 upper-division credits in American history; 6 upper-division credits in European history; 6 additional credits upper-

division history electives; one HSTA/HSTR 400-level approved writing course; and EDU 497 (C&I 428). All requirements for the history major apply. Students with a teaching major in history must also complete a teaching major or minor in a second field. For the history teaching major, students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. Students may also earn a teaching minor in history. See the Department of Curriculum & Instruction for more information.

Bachelor of Arts - History; History Education Option

College Humanities & Sciences

Catalog Year: 2016-2017

	HSTR 102H - Western Civilization II (EU) Offered spring. A comprehensive, introductory history of western civilization from 1648 to the present. Lecture-discussion. Credit not allowed for both HSTR 102H and 104H.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Montana History

Rule: Complete the following course.

	Course	Credits
	HSTA 255 - Montana History (AM) Offered autumn. An introductory and interpretive history from Lewis and Clark to 2000.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Historical Methods Course

Rule: Complete the following course.

	Course	Credits
	HSTR 200 - Intro: Historical Methods Offered autumn and spring. Enrollment limited to history majors or by consent of the instructor. This course introduces students to the practice of history and prepares them for upper-division courses in the field. Students will learn to critically read secondary sources, research in primary sources, analyze documents, and write clear and convincing historical essays. This course is required for recently declared history majors and minors. Students should take it before taking upper-division history courses.	1 Credits
Minimum Required Grade: C-		1 Total Credits Required

American History Upper Division Electives

Rule: Choose at least 6 credits from the following courses

Note: null

	Course	Credits
	HSTA 311 - Early America (AM) Emphasis changes from year to year. Can touch upon the political economy of Puritanism, through gender and family to the preconditions for the American Revolution.	3 Credits
	HSTA 315 - Early American Republic (AM) Democracy, nationalism and sectionalism, the War of 1812, the second party system, social order and disorder, the capitalist revolution.	3 Credits
	HSTA 316 - American Civil War Era (AM) Civil War and Reconstruction; the triumph of the industrialist and capitalist ethic.	3 Credits
	HSTA 320 - Birth of Modern US (AM) The history of the U.S. from 1877 to 1920 is largely the story of Americans responding to profound social, cultural and economic change. In an effort to bring order to their changing world, Americans created new institutions, retooled their ideologies, and improved the nation's infrastructure. The order they created is, in modified form, still with us today. Students will explore the myriad changes that transformed the United States during this period and study the social, political, and cultural struggles that shaped the emergence of Modern America.	3 Credits
	HSTA 321 - America in Crisis (AM) This era in U.S. history was marked by a series of crises: the contested transition to modernity during the 1920s, the Great Depression, and World War II and its aftermath. This course will explore how Americans responded to these crises, why they responded to them the way they did, and how their responses altered the society in which they lived.	3 Credits
	HSTA 322 - American History: WWII to Pres (AM) The Cold War and its consequences, the civil rights revolution, affluence and anxiety, counter-culture, political radicalism, feminism, the Nixon years, Watergate and after.	3 Credits

	HSTA 323 - U.S. in the 1950s (AM) Examines the political, social, cultural, intellectual developments of America in the 1950s. Particular emphasis is placed on cultural history.	3 Credits
	HSTA 324 - U.S. in the 1960s (AM) Examines the political, social, cultural, intellectual developments of America in the 1960s. Topics include the Great Society, political radicalism, the counter culture, black radicalism, and Vietnam.	3 Credits
	HSTA 333 - Key Events in American Militar (R-6) (AM) The French and Indian Wars to Vietnam and beyond; chronological and topical accounts.	3 Credits
	HSTA 335 - Movie America (AM) This course examines major topics and themes in United States history from the early twentieth century to the present using movies as primary sources.	3 Credits
	HSTA 342H - Afr Amer Hist to 1865 (AM) Offered intermittently. Same as AAS 342H. Survey of the African American experience from the African background to the end of the Civil War. Focus on Black American quest for the American Dream, and how Blacks attempted to deal with the challenges of enslavement and racism.	3 Credits
	HSTA 343H - Afr Amer Hist Since 1865 (AM) Same as AAS 343H. Study of the African American experience since the Civil War. Change and continuity in the African American experience, the fight against Jim Crow, the struggle for civil rights, and post-civil rights economic, political, social and cultural developments and challenges.	3 Credits
	HSTA 347 - Voodoo, Muslim, Church (AM) The African American religious experience encompasses Islam, Christianity, Santeria, voodoo, and many others. In this course, students will examine the history of religious expression within the African-American community from the colonial era through the twentieth century. Central to the course question, "How did religion shape the experience of the African-American community?" Students will also examine the ways in which religious practice influenced social, political, and cultural changes in American history. Same as AAS 347.	3 Credits
	HSTA 354X - Ind MT Since Reserv Era (AM) Offered autumn odd-numbered years. Same as ANTH 324X and NAS 324X. Examination of the history of Montana Indians since the establishment of the reservations, contemporary conditions, and issues among both reservation and non-reservation Indian communities in the state. Special attention given to social and economic conditions, treaty rights, tribal sovereignty, and legal issues.	3 Credits
	HSTA 361 - The American South (AM) Social history of the American South with particular attention to race, class, and gender.	3 Credits
	HSTA 370H - Wmn Amer Colonial to Civil War Offered autumn. Interpretive overview of major themes and events in U.S. womens history to 1865. Same as WGS 370H.	3 Credits

	HSTA 371H - Wmn Amer Civil War to Present Offered spring. Interpretive overview of major themes and events in U.S. women's history from 1865 to the present. Same as WGS 371.	3 Credits
	HSTA 372 - The American Revolution (AM) Delving into the history of the early modern Atlantic world, this course examines the transnational ramifications of the American Revolution. Specifically, it examines the Revolution's economic and ideological origins, European involvement in the Revolutionary War, as well as the Revolution's impact on African American slavery and the slave trade. We will also consider its implications for Haitian and Latin American independence. And finally, we will discuss the creation of the U.S. Constitution, America's struggle for political sovereignty, and the Revolution's impact on Native Americans, women and families, and conceptions of American identity during the Early National period.	3 Credits
	HSTA 380 - AmericanConstitutional History (AM) An examination of major issues in the American constitutional past. Topics include the creation of the U.S. Constitution and the problem of ? original intent,? courts and judicial review, slavery and anti-slavery, the bill o frights, industrial capitalism and the welfare state, and majority rule and minority rights in American democracy.	3 Credits
	HSTA 382H - History of American Law (AM) Issues in the social history of law from the colonial period to the present.	3 Credits
	HSTA 385 - Families & Children in America (AM) Historical overview of families and children in the United States from the colonial era to the present. Topics include changing patterns of family life, the evolution of attitudes toward children and youth, the relationship between the American family and the nation-state, and debates over "family values" from the nation's founding to the present.	3 Credits
	HSTA 391 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	HSTA 491 - Special topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.	1 To 12 Credits
	HSTA 494 - Seminar (R-6) Consent of instructor.	1 To 6 Credits
	HSTR 364 - Environmental History (AM) Prereq., lower-division course in Perspective 5 or consent of instr. A history of the human-nature interaction in the United States.	3 Credits
	HSTR 367 - 19th Cent Amer West (AM) Euro-American movement and conflict in the nineteenth century trans-Mississippi west.	3 Credits
	HSTR 369 - 20th Cent Amer West (AM) The contemporary trans-Mississippi West.	3 Credits

	NASX 464 - Hist Amer Indian Affrs to 1776 Offered Autumn. Same as HIST 464. A study of American Indian relations with Europeans and the United States from first contact to 1776.	3 Credits
	NASX 465 - Hist Amer Indian Affrs 10 Cent Offered Spring. Same as HIST 465. A study of tribal encounters and adjustments to the American nations in the nineteenth century.	3 Credits
	NASX 466 - Hist of Indian Affrs from 1890 Offered Autumn. Same as HIST 466. A study of tribal encounters and adjustments to the American nation from 1890.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

World History Electives

Rule: Choose at least 9 credits from the following courses

	Course	Credits
	ANTY 141H - The Silk Road Offered autumn and spring. Introduction to the study of the human communities, cultures, and economies in Central and Southwest Asia along the ancient four thousand mile-long Silk Road.	3 Credits
	HSTR 191 - Special Topics (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	HSTR 230H - Colonial Latin America (WRLD) Offered autumn. Latin America from conquest by Spain and Portugal to wars for independence. Focus on social relations, imperial and local politics, hegemony, resistance, and change.	3 Credits
	HSTR 231H - Modern Latin America (WRLD) Offered spring. Latin America from wars of independence to the present. Focus on social relations, development models, politics, and popular movements.	3 Credits
	HSTR 240 - East Asian Civilizations (WRLD) An interdisciplinary, pluralist, and exploratory introduction to civilizations of East Asia. Teaching Methods Requirement

Rule: Complete the following course.

Note: The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Methods: 5-12 Social Studies.

	Course	**Credits**

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits
Minimum Required Grade: C-		3 Total Credits Required

History Advanced Writing Courses

Rule: Must choose one of the following courses:

	Course	Credits
	HSTA 415 - The Black Radical Tradition Offered intermittently. Same as HSTA 415. Prereq., HSTR 200 and only open to majors and minors in history or consent of instructor. From slave revolts through to the Move rebellion in Philadelphia, this course examines how the African-American community has engaged in radical efforts to change the status quo in the name of seeking justice.	3 Credits
	HSTA 417 - Prayer & Civil Rights (AM) Same as HSTA 417. HSTR 200 and only open to majors and minors in history or consent of instructor. This course explores the meaning of public prayer in the Civil Rights Movement. Built around the question, "Does religion help or hinder the pursuit of social change?" this class combines historical and religious studies inquiry to trace changes in civil rights activists' efforts to make use of religion. By focusing on a particular religious practice - in this case prayer - in a specific, but limited period of time, this course challenges students to consider how meaning is formed through historical action and study the social significance of religious practice. This formed through historical action and study the social significance of religious practice. This course complicates prevailing ideas about the normalcy of African-American religious practitioners' prayer, invites students to examine their assumptions about the nature of prayer, and traces how religion spilled out of sanctuaries into the streets during the civil rights era.	3 Credits
	HSTA 422 - U.S. After WWII: Research Sem (AM) Prereq. HSTR 200. Enrollment for history majors and minors , graduate students in history, or by consent of the instructor. This course offers students an opportunity to do original research and produce an article-length research paper on a topic in post-war American history. It meets the department’s requirement of an upper-level research seminar as well as the upper-division writing expectation in the major.	3 Credits
	HSTA 461 - Research in Montana History (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. This course is a research and writing seminar in Montana history. Students will learn advanced research methodology in history and will be exposed to a variety of databases and source collections in Montana history that are available locally and online. Students will research and write a primary-source based paper on a topic in Montana history. This course fulfills the upper-division writing requirement for the history department and the university.	3 Credits
	HSTA 471 - Writing Women's Lives (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Consent of instructor required. Upper-division writing-intensive seminar in women’s history. Students will write an original research paper based on primary source materials.	3 Credits

	HSTR 400 - Historical Research Seminar Prereq., HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Topics vary according to the instructor. The goal of this course is for students to propose and execute a substantial research project. Upper division writing course for the history major.	3 Credits
	HSTR 418 - Britain 1500 - 1800 (EU) Prereq., HSTR 200. Recommended HSTR 348 or 349. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Students will discuss specific issues in the historiography of the early modern period in British history (c1500-1800) and produce research papers grounded in primary sources.	3 Credits
	HSTR 437 - US-Latin America Relations (WRLD) Prereq., HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. Research and writing seminar on U.S.-Latin American relations from the late 18th century through the 20th century.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Teaching History Minor

A teaching minor is an academic minor which may contain different course requirements designed to meet state standards. Those interested in teaching in K-12 schools must complete a teaching major in a content area plus the teacher preparation program through the Department of Curriculum and Instruction. Additional teaching areas can be added through completion of either a teaching major or a teaching minor in that content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

The term 'minor' for this teaching option refers to courses that need to be completed. To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a minor form for graduation or the minor section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Minor - History (Minor); Track: Teaching History

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 31

Required Cumulative GPA: 2.0

Note: Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A minor GPA of 2.75 is required to be eligible for student teaching. Individuals completing a teaching minor must also complete a teaching major in another content area.

Lower Division American History Courses

Rule: Must complete all of the following courses

	HSTR 102H - Western Civilization II (EU) Offered spring. A comprehensive, introductory history of western civilization from 1648 to the present. Lecture-discussion. Credit not allowed for both HSTR 102H and 104H.	4 Credits
	HSTR 103H - Honors Western Civilization I (EU) Offered autumn. Limited enrollment by consent of instr. only. A comprehensive, introductory history of western civilization from classical antiquity to 1648. Lecture-honors discussion. Credit not allowed for both 103H and 101H.	4 Credits
	HSTR 104H - Honors Western Civilization II (EU) Offered spring. Limited enrollment by consent of instructor only. A comprehensive introductory history of western civilization from 1648 to the present. Lecture-honors discussion. Credit not allowed for both HSTR 102H and 104H.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Historical Methods

Rule: Complete the following course.

	Course	Credits
	HSTR 200 - Intro: Historical Methods Offered autumn and spring. Enrollment limited to history majors or by consent of the instructor. This course introduces students to the practice of history and prepares them for upper-division courses in the field. Students will learn to critically read secondary sources, research in primary sources, analyze documents, and write clear and convincing historical essays. This course is required for recently declared history majors and minors. Students should take it before taking upper-division history courses.	1 Credits
Minimum Required Grade: C-		1 Total Credits Required

American Upper Division History Electives

Rule: Must choose 3 credits from the following

	Course	Credits
	HSTA 311 - Early America (AM) Emphasis changes from year to year. Can touch upon the political economy of Puritanism, through gender and family to the preconditions for the American Revolution.	3 Credits
	HSTA 315 - Early American Republic (AM) Democracy, nationalism and sectionalism, the War of 1812, the second party system, social order and disorder, the capitalist revolution.	3 Credits
	HSTA 316 - American Civil War Era (AM) Civil War and Reconstruction; the triumph of the industrialist and capitalist ethic.	3 Credits
	HSTA 320 - Birth of Modern US (AM) The history of the U.S. from 1877 to 1920 is largely the story of Americans responding to profound social, cultural and economic change. In an effort to bring order to their changing world, Americans created new institutions, retooled their ideologies, and improved the nation's infrastructure. The order they created is, in modified form, still with us today. Students will explore the myriad changes that transformed the United States during this period and study the social, political, and cultural struggles that shaped the emergence of Modern America.	3 Credits
	HSTA 321 - America in Crisis (AM) This era in U.S. history was marked by a series of crises: the contested transition to modernity during the 1920s, the Great Depression, and World War II and its aftermath. This course will explore how Americans responded to these crises, why they responded to them the way they did, and how their responses altered the society in which they lived.	3 Credits

	HSTA 322 - American History: WWII to Pres (AM) The Cold War and its consequences, the civil rights revolution, affluence and anxiety, counter-culture, political radicalism, feminism, the Nixon years, Watergate and after.	3 Credits
	HSTA 323 - U.S. in the 1950s (AM) Examines the political, social, cultural, intellectual developments of America in the 1950s. Particular emphasis is placed on cultural history.	3 Credits
	HSTA 324 - U.S. in the 1960s (AM) Examines the political, social, cultural, intellectual developments of America in the 1960s. Topics include the Great Society, political radicalism, the counter culture, black radicalism, and Vietnam.	3 Credits
	HSTA 333 - Key Events in American Militar (R-6) (AM) The French and Indian Wars to Vietnam and beyond; chronological and topical accounts.	3 Credits
	HSTA 335 - Movie America (AM) This course examines major topics and themes in United States history from the early twentieth century to the present using movies as primary sources.	3 Credits
	HSTA 342H - Afr Amer Hist to 1865 (AM) Offered intermittently. Same as AAS 342H. Survey of the African American experience from the African background to the end of the Civil War. Focus on Black American quest for the American Dream, and how Blacks attempted to deal with the challenges of enslavement and racism.	3 Credits
	HSTA 343H - Afr Amer Hist Since 1865 (AM) Same as AAS 343H. Study of the African American experience since the Civil War. Change and continuity in the African American experience, the fight against Jim Crow, the struggle for civil rights, and post-civil rights economic, political, social and cultural developments and challenges.	3 Credits
	HSTA 347 - Voodoo, Muslim, Church (AM) The African American religious experience encompasses Islam, Christianity, Santeria, voodoo, and many others. In this course, students will examine the history of religious expression within the African-American community from the colonial era through the twentieth century. Central to the course question, "How did religion shape the experience of the African-American community?" Students will also examine the ways in which religious practice influenced social, political, and cultural changes in American history. Same as AAS 347.	3 Credits
	HSTA 354X - Ind MT Since Reserv Era (AM) Offered autumn odd-numbered years. Same as ANTH 324X and NAS 324X. Examination of the history of Montana Indians since the establishment of the reservations, contemporary conditions, and issues among both reservation and non-reservation Indian communities in the state. Special attention given to social and economic conditions, treaty rights, tribal sovereignty, and legal issues.	3 Credits
	HSTA 361 - The American South (AM) Social history of the American South with particular attention to race, class, and gender.	3 Credits

	HSTA 370H - Wmn Amer Colonial to Civil War Offered autumn. Interpretive overview of major themes and events in U.S. womens history to 1865. Same as WGS 370H.	3 Credits
	HSTA 371H - Wmn Amer Civil War to Present Offered spring. Interpretive overview of major themes and events in U.S. women's history from 1865 to the present. Same as WGS 371.	3 Credits
	HSTA 372 - The American Revolution (AM) Delving into the history of the early modern Atlantic world, this course examines the transnational ramifications of the American Revolution. Specifically, it examines the Revolution's economic and ideological origins, European involvement in the Revolutionary War, as well as the Revolution's impact on African American slavery and the slave trade. We will also consider its implications for Haitian and Latin American independence. And finally, we will discuss the creation of the U.S. Constitution, America's struggle for political sovereignty, and the Revolution's impact on Native Americans, women and families, and conceptions of American identity during the Early National period.	3 Credits
	HSTA 380 - AmericanConstitutional History (AM) An examination of major issues in the American constitutional past. Topics include the creation of the U.S. Constitution and the problem of ? original intent,? courts and judicial review, slavery and anti-slavery, the bill o frights, industrial capitalism and the welfare state, and majority rule and minority rights in American democracy.	3 Credits
	HSTA 382H - History of American Law (AM) Issues in the social history of law from the colonial period to the present.	3 Credits
	HSTA 385 - Families & Children in America (AM) Historical overview of families and children in the United States from the colonial era to the present. Topics include changing patterns of family life, the evolution of attitudes toward children and youth, the relationship between the American family and the nation-state, and debates over "family values" from the nation's founding to the present.	3 Credits
	HSTA 391 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	HSTA 461 - Research in Montana History (AM) Prereq. HSTR 200. Enrollment for history majors and minors, graduate students in history, or by consent of the instructor. This course is a research and writing seminar in Montana history. Students will learn advanced research methodology in history and will be exposed to a variety of databases and source collections in Montana history that are available locally and online. Students will research and write a primary-source based paper on a topic in Montana history. This course fulfills the upper-division writing requirement for the history department and the university.	3 Credits
	HSTA 491 - Special topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.	1 To 12 Credits

	HSTA 494 - Seminar (R-6) Consent of instructor.	1 To 6 Credits
	HSTR 364 - Environmental History (AM) Prereq., lower-division course in Perspective 5 or consent of instr. A history of the human-nature interaction in the United States.	3 Credits
	HSTR 367 - 19th Cent Amer West (AM) Euro-American movement and conflict in the nineteenth century trans-Mississippi west.	3 Credits
	HSTR 369 - 20th Cent Amer West (AM) The contemporary trans-Mississippi West.	3 Credits
	NASX 464 - Hist Amer Indian Affrs to 1776 Offered Autumn. Same as HIST 464. A study of American Indian relations with Europeans and the United States from first contact to 1776.	3 Credits
	NASX 465 - Hist Amer Indian Affrs 10 Cent Offered Spring. Same as HIST 465. A study of tribal encounters and adjustments to the American nations in the nineteenth century.	3 Credits
	NASX 466 - Hist of Indian Affrs from 1890 Offered Autumn. Same as HIST 466. A study of tribal encounters and adjustments to the American nation from 1890.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

World History Electives

Rule: Must choose 6 credits from the following

	Course	**Credits**
	ANTY 141H - The Silk Road Offered autumn and spring. Introduction to the study of the human communities, cultures, and economies in Central and Southwest Asia along the ancient four thousand mile-long Silk Road.	3 Credits
	HSTR 191 - Special Topics (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	HSTR 230H - Colonial Latin America (WRLD) Offered autumn. Latin America from conquest by Spain and Portugal to wars for independence. Focus on social relations, imperial and local politics, hegemony, resistance, and change.	3 Credits
	HSTR 231H - Modern Latin America (WRLD) Offered spring. Latin America from wars of independence to the present. Focus on social relations, development models, politics, and popular movements.	3 Credits

	HSTR 240 - East Asian Civilizations (WRLD) An interdisciplinary, pluralist, and exploratory introduction to civilizations of East Asia. Primary focus on China, Japan, and Korea, the relations among them and their patterns of interaction with the outside world in pre-modern and modern periods.	3 Credits
	HSTR 241H - Central Asian Cult & Civ (WRLD) Same as ANTY 241H. Introduction to Central Asia's history, culture and ways of thinking. Focus on the political and social organization of Central Asia and cultural changes as expressed in art and interactions with China, India and the Middle East.	3 Credits
	HSTR 262H - Islamic Civil: Classical Age (WRLD) A concise history of the Islamic world from the 6th century to the fall of the Abbasid Empire in the 13th century, focusing primarily on the teachings of Islam and the causes for the rapid expansion of the Islamic empire.	3 Credits
	HSTR 264 - Islamic Civ: Modrn Era (WRLD) History of the Islamic world and particularly the Persian, Arabic, and Turkish speaking lands between 1453 and 1952.	3 Credits
	HSTR 272E - Terrorism:Viol Mod Wrld (WRLD) The rise and spread of terrorism in the modern world, from the French Revolution to the present.	3 Credits
	HSTR 291 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	HSTR 334 - Latin America: Reform and Revo (WRLD) Different ideologies and projects in Latin America aimed at gradual or radical transformation of political systems and/or socio-economic relations. From the Haitian Revolution to the Bolivarian vision of Hugo Chavez.	3 Credits
	HSTR 335 - Lat Am Workers & Labor (WRLD) Study of the experiences and agency of diverse working people in Latin America. Influence of race, ethnicity, gender, religion, and generation on working class identity and movements. Labor organizations and politics in historic context.	3 Credits
	HSTR 391 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	HSTR 392 - Independent Study (R-12)	1 To 12 Credits
	HSTR 435 - Lat Am Human Rgts & Memory (WRLD) The legacy of state violence and ongoing struggles for truth and justice in select Latin American case studies. Different uses of memory and narration in bearing witness to social and political conflict and human rights violations.	3 Credits
	HSTR 459 - Artistic Trad Cent & SW Asia (WRLD) Analysis of the study of human artistic creativity and scientific innovations of various cultures in Central and Southwest Asia since ancient times.	3 Credits

	HSTR 491 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.	1 To 12 Credits
	HSTR 492 - Independent Study (R-12) Prereq., consent of instr.	1 To 12 Credits
	PSCI 422 - Revolution & Reform in China Offered autumn. A history of the rise and fall of the Maoist regime and the complicated impact of the epochal post Mao reform movement.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

European Upper Division History Electives

Rule: Must choose 3 credits from the following

	Course	Credits
	HSTR 302 - Ancient Greece (EU) Offered intermittently. Same as MCLG 301H. Greek history from the earliest times through the Macedonian ascendancy, based on the writings of the Greek historians. Cannot receive credit for both HSTR 302 and MCLG 301H.	3 Credits
	HSTR 312 - Age of Absolut 1648-1789 (EU) The political, economic, intellectual, and social development of Europe 1648-1789.	3 Credits
	HSTR 320 - Europ Social & Intellect Hist (EU) The influence of the Renaissance, Baroque and Classical Ages, and the Enlightenment on early modern history.	3 Credits
	HSTR 323 - Europ Social & Intellect Hist: (EU) Romanticism, Realism, and the Avant-Garde against the historical background of the Industrial Revolution and urbanization.	3 Credits
	HSTR 348 - Britain 1485-1688 (EU) Social, political, religious, and intellectual history of the British peoples during the tumultuous period of reformation, exploration, constitutional crisis, and civil war.	3 Credits
	HSTR 349 - Britain from Rev - Reform 1688 (EU) The social, political, cultural, and intellectual consequences of British expansion, financial and industrial revolutions, and revolutionary movements.	3 Credits
	HSTR 352 - France Revol 1789-1848 (EU) Political, economic, and social upheaval and development.	3 Credits
	HSTR 353 - Modern France (EU) Political, economic and social development.	3 Credits
	HSTR 354 - Italy: 1300-1800 (EU) The emergence of the Italian states with an emphasis on cultural achievements in the late Medieval, Renaissance, Baroque, and Neoclassical periods.	3 Credits

	HSTR 355 - Italy: 1800-Present (EU) The emergence of a united Italy, the triumph of fascism and contemporary Italian society.	3 Credits
	HSTR 357 - Russia to 1881 (EU) Emphasis on the autocratic political tradition, Westernization, and territorial expansion.	3 Credits
	HSTR 358 - Russia Since 1881 (EU) Emphasis on modernization and the revolutionary movement; the Bolshevik Revolution and Stalinist era; the decline of Soviet system.	3 Credits
	HSTR 361 - Germ:Augsburg-Bismarck (EU) Political, economic and social development of the states of the Holy Roman Empire from 1555-1866.	3 Credits
	HSTR 363 - Eastern Europe (EU) Main currents in the history of Eastern Europe from earliest times to the present. Focus on the lands of Poland, Bohemia, Hungary, and the Balkan region.	3 Credits
	HSTR 391 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	HSTR 392 - Independent Study (R-12)	1 To 12 Credits
	HSTR 491 - Special Topics (R-12) Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.	1 To 12 Credits
	HSTR 492 - Independent Study (R-12) Prereq., consent of instr.	1 To 12 Credits
Minimum Required Grade: C-		3 Total Credits Required

Teaching Methods Requirement

Rule: Complete the following course.

Note: The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Methods: 5-12 Social Studies.

	Course	**Credits**

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geosciences Department

James R. Staub, Chair

Human impact on Earth systems and reliance on Earth's resources will increase as human population and economic production grows. These impacts are creating "global grand challenges": complex, globally important problems that require an interdisciplinary approach. The most pressing grand challenges over the next decade will be resource scarcity/depletion (especially water and petroleum), adaption to and mitigation of climate change and natural hazards, and environmental stewardship of highly stressed physical and biological Earth systems. As University of Montana Geoscientists, we address these challenges in our research and teaching. We develop the knowledge to find and extract mineral and water resources, solve problems caused by using those resources and develop models of the past, present and future Earth. Faculty, staff, graduate students, and undergraduate students are helping Montana and the World develop a sustainable future.

Our Vision:

We will build and teach a fundamental understanding of Earth processes to benefit humankind and sustain Earth systems.

Our Goals:

1. Conduct geoscience research, including obtaining extramural funding to perform essential and transformative research.

2. Disseminate research findings by publishing in peer-reviewed journals and presenting at national and international scientific conferences.

3. Teach students how to learn from known sources of information and create new knowledge from their own research.

4. Engage all graduate students and selected undergraduates in research and publication.

5. Produce graduates competent in their disciplines who can perform well in field, laboratory and computational settings, and who are prepared to serve as high-quality professionals in geoscience and related fields.

6. Provide opportunities for students to work and learn in other countries through international research and learning opportunities.

7. Educate the general student population about the nature of science and basic scientific principles through the study of Earth and its natural systems.

8. Engage the public with important geoscience issues through outreach and community education.

UM Geosciences in the National Context

With B.S., M.S. and Ph.D. degrees, UM Geosciences is one of 120 Ph.D. granting Geoscience departments in the United States. U.S. News & World Report ranks the UM Geosciences program with Universities like Florida State, Michigan Tech, University of Georgia, University of Pennsylvania, and University of South Carolina. We are ranked above schools like University of Idaho, University of Missouri, UNLV, and Notre Dame.

Employment

Geoscientists completing our program are employed by private industry, federal, state, and local governmental agencies, environmental consulting firms, non-profit organizations, and by schools needing Earth Science teachers. Jobs in geosciences are available at the B.S., M.S. and Ph.D. levels. The M.S. degree is considered the main working professional degree. The Ph.D. degree is required for positions at universities and with organizations specializing in research. However, there are ample opportunities for geoscience employment with the B.S. degree. Our graduates have a wide range of educational and employment opportunities. Over the last decade, 95% of our graduate program alumni are employed in Geosciences: 13% work for government, 23% for industry, 31% for consultancies and 2% for non-governmental organizations, 10% are teaching, and 17% went on for a Ph.D. UM Geosciences graduates have exceptional placement rates.

»Undergraduate Degree Requirements

We offer three Bachelor of Science degrees: Geosciences B.S., International Field Geosciences Joint B.S. with University of Cork (Ireland), and International Field Geosciences Dual B.S. with Potsdam University (Germany). We also offer an option in Earth Science Education.

The Upper-division Writing Expectation must be met for all degree options by successfully completing an upper-division writing course from the approved list in the Academic Policies and Procedures section of this catalog or by completing GEO 499 (GEOS 499).

Department Faculty

Professor

Joel T. Harper, Ph.D., University of Wyoming, 1998
Marc S. Hendrix, Ph.D., Stanford University, 1992

Nancy W. Hinman, Ph.D., University of California (San Diego), 1987
James W. Sears, Ph.D., Queen's University, 1979
George Stanley, Ph.D., University of Kansas, 1977
James R. Staub, Ph.D., University of South Carolina, 1985 (Dept. Chair)

Associate Professor

Julia A. Baldwin, Ph.D., Massachusetts Institute of Technology, 2003
Rebecca O. Bendick, Ph.D., University of Colorado, Boulder, 2000
Marco P. Maneta, Ph.D., University of Extremadura (Spain), 2006
Andrew C. Wilcox, Ph.D., Colorado State University, 2005

Assistant Professor

Payton Gardner, PhD., University of Utah, 2009
Hilary R. Martens, Ph.D., California Institute of Technology, 2016

Lecturer

Kathleen M. Harper, Ph.D., University of Wyoming, 1997

Research Faculty

Carrine E. Blank, Ph.D., University of California, Berkeley; Integrative Biology, 2002
Michael Hofmann, Ph.D., The University of Montana, 2005
Toby Meierbachtol, Ph.D., The University of Montana, 2014

Affiliates

Robert Lankston, Faculty Affiliate
Patrick Meere
Tetsuji Onou
Jill Scott
Alisa Wade, Researcher

Emeritus

Donald W. Hyndman
Ian M. Lange, Ph.D., University of Washington, 1968
Johnnie N. Moore, Ph.D., University of California (Los Angeles), 1976
Raymond C. Murray, Ph.D., University of Wisconsin, 1955
Steven D. Sheriff, University of Wyoming, 1981
Graham R. Thompson, Ph.D., Case Western Reserve University, l97l
Donald Winston, Ph.D., University of Texas, 1963
William W. Woessner, Ph.D., University of Wisconsin (Madison), 1978

Geoscience

Back to Top

- GEO 101N - Intro to Physical Geology
  Credits: 3. Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth. Course Attributes: Natural Science Course (N)
- GEO 102N - Intro to Physical Geology Lab
  Credits: 1. Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above. Course Attributes: Natural Science Lab Course (N) Natural Science Course (N)

- GEO 105N - Oceanography

  Credits: 3. Offered spring. The ocean covers 70 % of the globe, and yet vast regions remain unexplored. Interactions between the atmosphere and the sea moderate and control our climate. Nearly 40 % of the world's population lives within 100 kilometers of the coast. The oceans are geographically, environmentally, culturally, and economically critical to society. This course introduces oceanography, including the origin of water and ocean basins; marine resources; atmospheric circulation; air-sea interaction; ocean-climate feedback; currents, tides, and coastal processes; marine ecology; and use and misuse of the oceans. Course Attributes: Natural Science Course (N)

- GEO 106N - History of Life

  Credits: 3. Offered spring. The evolution of plants, invertebrates and vertebrate animals, highlighting major events in the evolution of life on Earth. Includes laboratory experience with fossils. Course Attributes: Natural Science Lab Course (N) Natural Science Course (N)

- GEO 107N - Natural Disasters

  Credits: 3. Offered intermittently. This course introduces the scientific context and latest research on natural hazards and disasters, including storms, flood, drought, mass wasting (landslides and avalanches), earthquakes and tsunamis, volcanic eruptions, and wildfires. Course Attributes: Natural Science Course (N)

- GEO 108N - Climate Change

  Credits: 3. Offered autumn. The geoscience perspective on the earth's climate system. Climate processes and feedbacks, climate history from early earth to the ice ages, present and future changes due to natural processes and human activities. Course Attributes: Natural Science Course (N)

- GEO 151 - Introduction to Fossil Fuels

  Credits: 3. Offered autumn. A broad introduction to the basic principles and concepts related to the exploration for, the composition of, and the utilization of fossil fuels (coal, coal bed methane, natural gas, and oil). Environmental issues related to fossil fuel development and utilization are also addressed.

- GEO 191 - Special Topics

  Credits: 1 TO 6. (R–6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one–time offerings of current topics.

- GEO 191N - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: Internships/Practicums

- GEO 211 - Earth's History and Evolution

  Credits: 4. Offered autumn and spring. Prereq., GEO 101N and GEO 102N. Traces the history of the Earth since its inception 4.6 billion years ago. Presents scientific theories for the origin of the Earth and the nature of important earth shaping events of the past, including the development of the oceans, atmosphere, and climate.

- GEO 225 - Earth Materials

  Credits: 4. Offered autumn. Prereq., GEO 101N, GEO 102N, and CHMY 121N or 141N. Study of minerals and rocks utilizing an Earth Systems approach; mineral identification and paragenesis; survey of the distribution of minerals from the interior to the surfaces of planets and the processes that led to their formation.

- GEO 291 - Special Topics

  Credits: 1 TO 6. (R–6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one–time offerings of current topics.

- GEO 304E - Science and Society

  Credits: 3. Offered autumn. Role of scientific knowledge in human societies from the pre–Classical to the present. Discussion of tools for integrating science into ethical, political, and social decisions, including analyses of modern case studies from physical sciences. Course Attributes: Ethical & Human Values Course

- GEO 305 - Igneous & Metamorph Petrology

Credits: 4. Offered spring. Prereq., GEO 225, CHMY 143N. Igneous rock associations, igneous processes and origins; metamorphic minerals and phase relationships, metamorphic zones, facies, and conditions; metamorphic environments, metallic minerals and mineral deposits.

- GEO 309 - Sedimentation/Stratigraphy

  Credits: 4. Offered spring. Prereq. GEO 211, 225. Origins of sediments and sedimentary rocks; climate, weathering, and weathering products; transport, deposition, and depositional environments of sediments; concepts and methods of stratigraphy including correlation of sedimentary rocks and an introduction to basin analysis.

- GEO 311 - Paleobiology

  Credits: 3. Offered spring. Prereq. GEO 101N or equiv. level Biology. Survey of the major groups of organisms in the geologic record and hands-on study of fossils; application of geologic and biologic data and principles to solve problems in geoscience and bioscience.

- GEO 315 - Structural Geology

  Credits: 4. Offered autumn. Prereq., GEO 211, 225. Structures of deformed rocks; mechanical principles; graphical interpretation of structural problems, tectonic principles.

- GEO 317 - Planetary Science

  Credits: 3. Offered autumn even-numbered years. Prereq., PHSX 205N/206N or PHSX 215N/216N and M 162, 171. Same as ASTR 351. Physical and geological characteristics of planets, satellites, asteroids, comets, and meteoroids with an emphasis on comparative planetology.

- GEO 318 - Surface Processes

  Credits: 4. Offered spring. Prereq., GEO 101/102, GEO 211, M 162 or M 171, and PHSX 205/206 or PHSX 215/216. This course will introduce students to the study of the earth using the laws and principles of physics. The course will describe the mechanisms underlying the processes that shape the earth and drive its evolution, including climate, tectonics, hydrology, glaciers, and geomorphology. The course will combine lectures, field data collection, data analysis, and lab activities.

- GEO 320 - Global Water

  Credits: 4. Offered autumn. Prereq. one semester of college chemistry, WRIT 101 or equiv., and completion of one writing course. Water is necessary for life. Without it, life as we know it cannot exist. This course discusses the chemistry of water as it moves through the hydrological cycle. We discuss how water chemistry evolves through atmospheric water, rain water, ground water, surface water, and sea water. Students will have an understanding of the chemical attributes of water in major water reservoirs. Class discussions, formal and informal writing assignments, a short laboratory experiment, and a field trip highlight examples of water chemistry. Students will use excel to solve problems and will learn citation conventions relevant for scientific writing.
  Course Attributes: Writing Course-Advanced

- GEO 327 - Geochemistry

  Credits: 4. Offered alternate years. Prereq. one year of college chemistry, one semester of calculus, and one semester of physical geology, or consent of instructor. One semester of mineralogy recommended. The chemical properties of elements control their geological distribution and underlie the basic physical properties of rocks. An understanding of geochemistry will help students understand water chemistry, sediment geochemistry, and igneous petrology. The course covers chemical principles applied to geologic materials and processes, including the origin and chemical composition of earth, atmosphere, and hydrosphere. Principles of stable and radiogenic isotope geochemistry are discussed. Students will use excel to solve problems. Class discussions, problems sets, and exams are used to assess student performance.

- GEO 391 - Special Topics

  Credits: 1 TO 9. (R–9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one–time offerings of current topics.

- GEO 392 - Independent Study

  Credits: 1 TO 6. (R–6) Offered every term. Specific topics of particular interest to individual students.

- GEO 398 - Internship

  Credits: 1 TO 6. Offered every term. Prereq., 12 credits in geosciences. Extended classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. No more than 3 credits of GEO 398 may be applied to the geosciences minor. A maximum

of 6 credits of Internship may count toward graduation. Course Attributes: Internships/Practicums

- GEO 420 - Hydrogeology

  Credits: 4. Offered spring. Prereq., GEO 101N-102N; PHSX 205N/206N or PHSX 215N/216N ; M 162 or 171 strongly recommended or consent of instr. Occurrence, movement, quality, and methods of quantification of groundwater. Geological framework and physics of groundwater flow. Supply, contamination, and management problems.

- GEO 421 - Hydrology

  Credits: 3. Offered autumn. Prereq. one semester college calculus and physics or consent of instructor. Introduction to the physical mechanisms that drive the water cycle at different scales. The course covers heat, momentum and mass transfer and storage mechanisms in turbulent systems and their role in the global and local climates. At the local scale, the equations that govern surface and subsurface water flows are studied. Along with the overarching goals, students will improve their quantitative skills, will gain experience accessing and reading the professional literature and will improve their capabilities to acquire knowledge independently.

- GEO 433 - Global Tectonics

  Credits: 3. Offered autumn. Prereq., GEO 315, M 162, and 2.25 or better overall GPA in geosciences courses. Geodynamics and tectonics of the Earth and other planets. Course material includes methods of observing tectonic processes and tectonic phenomena, both at the surface and in the deep earth, over a wide range of time scales.

- GEO 443 - Prin of Sedimentary Petrology

  Credits: 4. Offered autumn. Prereq., GEO 225 or graduate standing. Field, hand specimen and thin section petrology of siliciclastic and carbonate rocks, emphasis on tectonic and diagenetic interpretation of siliciclastic rock and environments of deposition and diagenesis of carbonate rocks.

- GEO 460 - Process Geomorphology

  Credits: 4. Offered autumn. Prereq., one semester college calculus and physics. Quantitative examination of landforms, runoff generation, weathering, mechanics of soil erosion by water and wind, mass wasting, glacial and periglacial processes and hillslope evolution.

- GEO 482 - Global Change

  Credits: 3. Offered Spring. Same as CCS 482. Prereq., upper division/higher standing in Geosciences or consent of instructor. Lectures, readings, discussions and practicum on the complexity of global climate. Emphasizes the physical, geochemical and geologic processes affecting climate change over geologic and recent time scales.

- GEO 488 - Snow, Ice and Climate

  Credits: 3. Offered spring. Prereq., M 121. Study of basic physical processes occurring in snow and ice, and how these processes govern the interaction between frozen water and the climate system. The first half of the course focuses in snow, with special attention to snow formation in the atmosphere, snow metamorphism, water flow through snow, and basic avalanche mechanics. The second half of the course focuses on ice and includes glacier and ice sheet flow dynamics, glacier hydrology, and ice age theory. Graduate students will be required to complete additional problem sets requiring higher level math; perform additional reading assignments; perform at a higher level on assignments and exams where students are asked to outline and describe various physical processes; submit a well researched and reference research proposal that is able to synthesize previous research and provide a sophisticated research plan.

- GEO 491 - Special Topics

  Credits: 1 TO 8. (R-8) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses or one-time offerings of current topics.

- GEO 492 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Specific topics of particular interest to individual students.

- GEO 494 - Senior Geology Seminar

  Credits: 1 TO 10. (R–10) Offered intermittently. Prereq., upper–division standing in geosciences or consent of instr. Independent study of various topics under the direction of a faculty member.

- GEO 498 - Internship

Credits: 1 TO 6. Offered every term. Prereq., 12 credits in geosciences. Extended classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. No more than 3 credits of GEOS 398 may be applied to the geosciences minor. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- GEO 499 - Senior Thesis /Capstone

  Credits: 3 TO 10. (R–10) Offered every term. Prereq., 18 credits in geosciences. Independent research project in any geosciences topic supervised by faculty member, and leading to completion of baccalaureate degree. Course Attributes: Writing Course-Advanced

- GEO 508 - Fundamentals of Acad Research

  Credits: 2. Offered autumn. Prereq., graduate standing. An introduction to research methods and tools in the academic setting intended for first semester graduate students in geosciences. Topics include proposal writing, presenting research results in oral and written formats, using computer tools for research in the geosciences, and ongoing research of department faculty. Level: Graduate

- GEO 528 - Sedimentary Basin Analysis

  Credits: 4. Offered intermittently. Influence of allocyclic processes (tectonism, climate, eustacy, etc.,) in shaping the evolution of sedimentary basins. Emphasis on integration and synthesis of tools of sedimentary basins analysis, including the study of depositional systems, provenance, paleocurrents, subsidence, sequence stratigraphy, and well logs. Level: Graduate

- GEO 548 - Topics in Cryosphere

  Credits: 3. (R–6 M.S., R–12 Ph.D.) Prereq., graduate standing or consent of instructor. Readings, discussions, lectures, and field experiments on various topics related to snow, ice, and climate processes. Recent topics: meltwater infiltration in snow, glacier hydrology, climate cycles, ice, and sea level rise. Level: Graduate

- GEO 560 - Fluvial Geomorphology

  Credits: 3. Offered spring. Prereq., graduate standing or consent of instructor. Application of fluid mechanics to sediment transport and development of river morphology. Form and process in river meanders, the pool–riffle sequence, aggradation, grade, and baselevel. Level: Graduate

- GEO 572 - Adv Hydrogeology

  Credits: 3. Offered autumn. Prereq., GEO 420 or consent of instr. Advanced concepts used in groundwater investigations, including flow systems analysis, hydrogeologic monitoring and sampling, resource evaluation, exploration, development and monitoring, and contaminant transport. Special problem areas in groundwater exploration and management. Level: Graduate

- GEO 573 - Appl Grndwater Modeling

  Credits: 3. Offered spring. Prereq., GEO 420 or consent of instr. Development of numerical modeling techniques, finite difference and finite element modeling of groundwater flow systems. Application of standard 2D and 3D models to field problems. Level: Graduate

- GEO 579 - Chemistry of Hot Springs

  Credits: 3. Offered alternate years. Prereq., one year of college of chemistry or consent of instr. Hydrothermal systems support the most ancient microorganisms and may have been the locus for the first appearance of life on Earth. Terrestrial hot springs are the surface expression of deep circulation of fluids that concentrate elements, opening a window into processes leading to ore formation. This course discusses the chemistry and geology of hydrothermal systems including solute/gas geothermometry, acid/base reactions, oxidation/reduction reactions, mineral equilibrium, and microbial ecology as applied to terrestrial and submarine hydrothermal systems. The course includes an introduction to the use of geochemical models and a field trip to a hot spring system. Students are evaluated on class discussions and presentations, problems sets, and a term paper. Level: Graduate

- GEO 580 - Topics Mineral & Petrol

  Credits: 1 TO 12. (R–6 for M.S., R–12 for Ph.D.) Prereq., consent of instr. Offerings on request of graduate students by arrangement with appropriate faculty. Recent topics: tectonics and petrology; alkaline igneous rocks. Level: Graduate

- GEO 582 - Tps Structure & Geophysics

  Credits: 1 TO 12. (R–6 for M.S., R–12 for Ph.D.) Prereq., consent of instr. Offerings on request of graduate students by arrangement with appropriate faculty. Recent topics: structural analysis, Precambrian crustal evolution, field trips on Rocky Mountain structure. Level: Graduate

- GEO 583 - Tps Strat, Sed & Paleo
  Credits: 1 TO 12. (R–6 for M.S., R–12 for Ph.D.) Prereq., consent of instr. Offerings on request of graduate students by arrangement with appropriate faculty. Recent topics: evolution of life; Proterozoic stratigraphy; reefs through time. Level: Graduate
- GEO 585 - Tps Hydro Low-Temp Geochem
  Credits: 1 TO 12. (R–6 for M.S., R–12 for Ph.D.) Prereq., consent of instr. Offerings on request of graduate students by arrangement with appropriate faculty. Recent topics: field methods, well design, contaminant transport, geochemical modeling. Level: Graduate
- GEO 590 - Supervised Internship
  Credits: 1 TO 12. Offered intermittently. Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate Course Attributes: Internships/Practicums
- GEO 595 - Special Topics
  Credits: 1 TO 8. (R–8) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one–time offerings of current topics. Level: Graduate
- GEO 597 - Advanced Problems
  Credits: 1 TO 10. (R–10) Offered intermittently. Prereq., consent of instr. Investigations of geological problems exclusive of thesis or dissertation research. Level: Graduate
- GEO 599 - Thesis Research
  Credits: 1 TO 12. (R–6) Offered every term. Prereq., thesis proposal approval. Directed research to serve as thesis for the master degree. Credit assigned upon submittal of final copy of approved and bound thesis. Level: Graduate
- GEO 699 - Dissertation Research
  Credits: 1 TO 12. (R–12) Offered every term. Prereq., dissertation proposal approval. Directed research to serve as dissertation for the Ph.D. degree. Credit assigned upon submittal of final copy of approved and bound dissertation. Level: Graduate

Geosciences B.S.

Bachelor of Science - Geosciences

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 62

Required Cumulative GPA: 2.0

Note: This option is designed for students who seek post-graduate employment as a professional geoscientist or preparation for graduate study in geosciences.

Lower Division Core

Rule: Must complete all of the following courses

Note: .

	Course	Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits

	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
	GEO 211 - Earth's History and Evolution Offered autumn and spring. Prereq., GEO 101N and GEO 102N. Traces the history of the Earth since its inception 4.6 billion years ago. Presents scientific theories for the origin of the Earth and the nature of important earth shaping events of the past, including the development of the oceans, atmosphere, and climate.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Degree Electives

Rule: Must complete 24 credits from the following list of courses

	Course	Credits
	GEO 225 - Earth Materials Offered autumn. Prereq., GEO 101N, GEO 102N, and CHMY 121N or 141N. Study of minerals and rocks utilizing an Earth Systems approach; mineral identification and paragenesis; survey of the distribution of minerals from the interior to the surfaces of planets and the processes that led to their formation.	4 Credits
	GEO 305 - Igneous & Metamorph Petrology Offered spring. Prereq., GEO 225, CHMY 143N. Igneous rock associations, igneous processes and origins; metamorphic minerals and phase relationships, metamorphic zones, facies, and conditions; metamorphic environments, metallic minerals and mineral deposits.	4 Credits
	GEO 309 - Sedimentation/Stratigraphy Offered spring. Prereq. GEO 211, 225. Origins of sediments and sedimentary rocks; climate, weathering, and weathering products; transport, deposition, and depositional environments of sediments; concepts and methods of stratigraphy including correlation of sedimentary rocks and an introduction to basin analysis.	4 Credits
	GEO 311 - Paleobiology Offered spring. Prereq. GEO 101N or equiv. level Biology. Survey of the major groups of organisms in the geologic record and hands-on study of fossils; application of geologic and biologic data and principles to solve problems in geoscience and bioscience.	3 Credits
	GEO 315 - Structural Geology Offered autumn. Prereq., GEO 211, 225. Structures of deformed rocks; mechanical principles; graphical interpretation of structural problems, tectonic principles.	4 Credits

	GEO 318 - Surface Processes Offered spring. Prereq., GEO 101/102, GEO 211, M 162 or M 171, and PHSX 205/206 or PHSX 215/216. This course will introduce students to the study of the earth using the laws and principles of physics. The course will describe the mechanisms underlying the processes that shape the earth and drive its evolution, including climate, tectonics, hydrology, glaciers, and geomorphology. The course will combine lectures, field data collection, data analysis, and lab activities.	4 Credits
	GEO 320 - Global Water Offered autumn. Prereq. one semester of college chemistry, WRIT 101 or equiv., and completion of one writing course. Water is necessary for life. Without it, life as we know it cannot exist. This course discusses the chemistry of water as it moves through the hydrological cycle. We discuss how water chemistry evolves through atmospheric water, rain water, ground water, surface water, and sea water. Students will have an understanding of the chemical attributes of water in major water reservoirs. Class discussions, formal and informal writing assignments, a short laboratory experiment, and a field trip highlight examples of water chemistry. Students will use excel to solve problems and will learn citation conventions relevant for scientific writing.	4 Credits
	GEO 327 - Geochemistry Offered alternate years. Prereq. one year of college chemistry, one semester of calculus, and one semester of physical geology, or consent of instructor. One semester of mineralogy recommended. The chemical properties of elements control their geological distribution and underlie the basic physical properties of rocks. An understanding of geochemistry will help students understand water chemistry, sediment geochemistry, and igneous petrology. The course covers chemical principles applied to geologic materials and processes, including the origin and chemical composition of earth, atmosphere, and hydrosphere. Principles of stable and radiogenic isotope geochemistry are discussed. Students will use excel to solve problems. Class discussions, problems sets, and exams are used to assess student performance.	4 Credits
	GEO 420 - Hydrogeology Offered spring. Prereq., GEO 101N-102N; PHSX 205N/206N or PHSX 215N/216N ; M 162 or 171 strongly recommended or consent of instr. Occurrence, movement, quality, and methods of quantification of groundwater. Geological framework and physics of groundwater flow. Supply, contamination, and management problems.	4 Credits
	GEO 421 - Hydrology Offered autumn. Prereq. one semester college calculus and physics or consent of instructor. Introduction to the physical mechanisms that drive the water cycle at different scales. The course covers heat, momentum and mass transfer and storage mechanisms in turbulent systems and their role in the global and local climates. At the local scale, the equations that govern surface and subsurface water flows are studied. Along with the overarching goals, students will improve their quantitative skills, will gain experience accessing and reading the professional literature and will improve their capabilities to acquire knowledge independently.	3 Credits

	GEO 433 - Global Tectonics Offered autumn. Prereq., GEO 315, M 162, and 2.25 or better overall GPA in geosciences courses. Geodynamics and tectonics of the Earth and other planets. Course material includes methods of observing tectonic processes and tectonic phenomena, both at the surface and in the deep earth, over a wide range of time scales.	3 Credits
	GEO 443 - Prin of Sedimentary Petrology Offered autumn. Prereq., GEO 225 or graduate standing. Field, hand specimen and thin section petrology of siliciclastic and carbonate rocks, emphasis on tectonic and diagenetic interpretation of siliciclastic rock and environments of deposition and diagenesis of carbonate rocks.	4 Credits
	GEO 460 - Process Geomorphology Offered autumn. Prereq., one semester college calculus and physics. Quantitative examination of landforms, runoff generation, weathering, mechanics of soil erosion by water and wind, mass wasting, glacial and periglacial processes and hillslope evolution.	4 Credits
	GEO 482 - Global Change Offered Spring. Same as CCS 482. Prereq., upper division/higher standing in Geosciences or consent of instructor. Lectures, readings, discussions and practicum on the complexity of global climate. Emphasizes the physical, geochemical and geologic processes affecting climate change over geologic and recent time scales.	3 Credits
	GEO 488 - Snow, Ice and Climate Offered spring. Prereq., M 121. Study of basic physical processes occurring in snow and ice, and how these processes govern the interaction between frozen water and the climate system. The first half of the course focuses in snow, with special attention to snow formation in the atmosphere, snow metamorphism, water flow through snow, and basic avalanche mechanics. The second half of the course focuses on ice and includes glacier and ice sheet flow dynamics, glacier hydrology, and ice age theory. Graduate students will be required to complete additional problem sets requiring higher level math; perform additional reading assignments; perform at a higher level on assignments and exams where students are asked to outline and describe various physical processes; submit a well researched and reference research proposal that is able to synthesize previous research and provide a sophisticated research plan.	3 Credits
	GEO 491 - Special Topics (R-8) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses or one-time offerings of current topics.	1 To 8 Credits
Minimum Required Grade: C-		24 Total Credits Required

Cognate Sciences

Rule: In addition to completing course work in Geosciences, a minimum of 30 credits in cognate science classes must be completed.

Note: More advanced courses in Chemistry, Computer Science, Math, and Physics may be used to meet the 30 credit minimum total in cognate sciences. Biology 100N or above is also appropriate. Course substitutions for the 30 credit minimum in cognate sciences must be approved by a departmental advisor.

Physics

Rule: Must complete 1 of the following sequences

10 Total Credits Required

Physics

Rule: May complete the following sequence

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics with Calculus

Rule: May complete the following sequence

	Course	Credits

	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Chemistry

Rule: Must complete the following courses

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

Math

Rule: Must complete 1 of the following subcategories

7-8 Total Credits Required

Math Option 1

Rule: May complete the following 2 courses

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 263 - Applied Differential Equations Offered spring. Prereq., one of M 162, 171 or 181 and knowledge of basic trigonometry. Solution of ordinary differential equations and systems with emphasis on applications, numerical methods and computer software.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Math Option 2

Rule: May complete the following 2 courses

	Course	Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Computer Science

Rule: Must complete 1 course in Computer Science (Programming or Modeling)

Note: These courses are recommended to complete the Computer Science requirement. Credit may be received for only 1 of these 4 courses for the 30 credit minimum cognate science requirement.

	Course	Credits

	CSCI 172 - Intro to Computer Modeling Offered autumn and spring. Problem solving and data modeling using computer productivity software. Emphasis using spreadsheets and database for data analysis. Credit not allowed for CSCI 172, CRT 172, and CS 172.	3 Credits
	CSCI 250 - Computer Mdlng/Science Majors Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.	3 Credits
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Writing

Rule: Must complete 1 upper division writing course

Note: These courses are recommended to complete the upper division writing requirement in Geosciences but students may also select from the university-approved list of upper division writing courses to fulfill this requirement.

	Course	**Credits**
	GEO 320 - Global Water Offered autumn. Prereq. one semester of college chemistry, WRIT 101 or equiv., and completion of one writing course. Water is necessary for life. Without it, life as we know it cannot exist. This course discusses the chemistry of water as it moves through the hydrological cycle. We discuss how water chemistry evolves through atmospheric water, rain water, ground water, surface water, and sea water. Students will have an understanding of the chemical attributes of water in major water reservoirs. Class discussions, formal and informal writing assignments, a short laboratory experiment, and a field trip highlight examples of water chemistry. Students will use excel to solve problems and will learn citation conventions relevant for scientific writing.	4 Credits
	GEO 499 - senior thesis / capstone (R–10) Offered every term. Prereq., 18 credits in geosciences. Independent research project in any geosciences topic supervised by faculty member, and leading to completion of baccalaureate degree.	3 To 10 Credits

Minimum Required Grade: C-	3 Total Credits Required

Languages

Rule: Must complete 1 of the following courses

Note: Students graduating in Geosciences may substitute one of these courses in place of the Modern and Classical Language requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Earth Science Education

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

Bachelor of Science - Geosciences; Earth Science Education Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 60

Required Cumulative GPA: 2.0

Note: Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A major GPA of 2.75 is required to be eligible for student teaching. This major does not qualify as a single field endorsement. Individuals must complete a second teaching major or minor in another content area.

Lower Division Core

Rule: Must complete all of the following courses
Note: .
Minimum Required Grade: C-
17 Total Credits Required

Geosciences Core

Rule: Must complete all of the following courses.

	Course	Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits
	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
	GEO 211 - Earth's History and Evolution Offered autumn and spring. Prereq., GEO 101N and GEO 102N. Traces the history of the Earth since its inception 4.6 billion years ago. Presents scientific theories for the origin of the Earth and the nature of important earth shaping events of the past, including the development of the oceans, atmosphere, and climate.	4 Credits
	GEO 225 - Earth Materials Offered autumn. Prereq., GEO 101N, GEO 102N, and CHMY 121N or 141N. Study of minerals and rocks utilizing an Earth Systems approach; mineral identification and paragenesis; survey of the distribution of minerals from the interior to the surfaces of planets and the processes that led to their formation.	4 Credits
Minimum Required Grade: C-		12 Total Credits Required

Environmental Geoscience Course

Rule: Must complete one of the following.

	Course	Credits

	GEO 105N - Oceanography Offered spring. The ocean covers 70 % of the globe, and yet vast regions remain unexplored. Interactions between the atmosphere and the sea moderate and control our climate. Nearly 40 % of the world's population lives within 100 kilometers of the coast. The oceans are geographically, environmentally, culturally, and economically critical to society. This course introduces oceanography, including the origin of water and ocean basins; marine resources; atmospheric circulation; air-sea interaction; ocean-climate feedback; currents, tides, and coastal processes; marine ecology; and use and misuse of the oceans.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Geosciences

Minimum Required Grade: C-
17 Total Credits Required

Required Upper Division Geoscience

Rule: Complete all of the following.

	Course	Credits
	GEO 304E - Science and Society Offered autumn. Role of scientific knowledge in human societies from the pre–Classical to the present. Discussion of tools for integrating science into ethical, political, and social decisions, including analyses of modern case studies from physical sciences.	3 Credits
	GEO 311 - Paleobiology Offered spring. Prereq. GEO 101N or equiv. level Biology. Survey of the major groups of organisms in the geologic record and hands-on study of fossils; application of geologic and biologic data and principles to solve problems in geoscience and bioscience.	3 Credits
	GEO 315 - Structural Geology Offered autumn. Prereq., GEO 211, 225. Structures of deformed rocks; mechanical principles; graphical interpretation of structural problems, tectonic principles.	4 Credits
	GEO 318 - Surface Processes Offered spring. Prereq., GEO 101/102, GEO 211, M 162 or M 171, and PHSX 205/206 or PHSX 215/216. This course will introduce students to the study of the earth using the laws and principles of physics. The course will describe the mechanisms underlying the processes that shape the earth and drive its evolution, including climate, tectonics, hydrology, glaciers, and geomorphology. The course will combine lectures, field data collection, data analysis, and lab activities.	4 Credits
Minimum Required Grade: C-		14 Total Credits Required

Elective Upper Division Geoscience

Rule: Complete one additional GEO course at the 300- or 400-level

Note: GEO 320 Global Water is recommended to complete the upper division writing requirement in Geosciences but students may also select from the university-approved list of upper division writing courses to fulfill this requirement.

Physics

Rule: Must complete 1 of the following sequences

10 Total Credits Required

Physics

Rule: May complete the following sequence

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics with Calculus

Rule: May complete the following sequence

	Course	Credits

	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Chemistry

Rule: Must complete the following courses

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123 - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or CHMY 141N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 485 - Laboratory Safety Offered autumn. Prereq., one year of college chemistry. Awareness of and methods of control of hazards encountered in laboratory work. Awareness of legal constraints on work with chemicals. Sources of information regarding chemical hazards.	1 Credits
Minimum Required Grade: C-		7 Total Credits Required

Math

Rule: Must complete one math and one statistics course

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Astronomy

Rule: Must complete the following course

	Course	Credits
	ASTR 131N - Elementary Astronomy I Offered autumn. Prereq., high school algebra and geometry. An introduction to observational, historical, and planetary astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Teaching Methods Course

Rule: Must complete the following course.

Note: The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Methods: 5-12 Science.

	Course	Credits

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Languages

Rule: Must complete 1 of the following courses

Note: Students graduating in Geosciences may substitute one of these courses in place of the Modern and Classical Language requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		3 Total Credits Required

International Field Geosciences Dual

Bachelor of Science - International Field Geos Dual

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 65

Required Cumulative GPA: 2.0

Note: This degree is designed specifically for students who seek to combine a rigorous education in the Geosciences with a yearlong international Geosciences experience and an emphasis on field-based learning. It requires attending classes and living overseas. For students who satisfy all degree requirements, a B.S. degree in International Field Geosciences will be awarded by The University of Montana and a second B.S. degree in International Field Geosciences will be awarded by the Potsdam University. The degree requirements specified below pertain both to UM-based and Potsdam-based students seeking their UM diploma. Potsdam-based students are eligible to satisfy any of the following specific requirements through credits that are transferred from Potsdam and approved as equivalent by the UM Geosciences undergraduate advisors.

Lower Division Core

Rule: Must complete all of the following courses

Note: .

	Course	Credits

	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits
	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
	GEO 211 - Earth's History and Evolution Offered autumn and spring. Prereq., GEO 101N and GEO 102N. Traces the history of the Earth since its inception 4.6 billion years ago. Presents scientific theories for the origin of the Earth and the nature of important earth shaping events of the past, including the development of the oceans, atmosphere, and climate.	4 Credits
	GEO 225 - Earth Materials Offered autumn. Prereq., GEO 101N, GEO 102N, and CHMY 121N or 141N. Study of minerals and rocks utilizing an Earth Systems approach; mineral identification and paragenesis; survey of the distribution of minerals from the interior to the surfaces of planets and the processes that led to their formation.	4 Credits
Minimum Required Grade: C-		12 Total Credits Required

Upper Division Core

Rule: Must complete all of the following courses

	Course	**Credits**
	GEO 315 - Structural Geology Offered autumn. Prereq., GEO 211, 225. Structures of deformed rocks; mechanical principles; graphical interpretation of structural problems, tectonic principles.	4 Credits
	GEO 318 - Surface Processes Offered spring. Prereq., GEO 101/102, GEO 211, M 162 or M 171, and PHSX 205/206 or PHSX 215/216. This course will introduce students to the study of the earth using the laws and principles of physics. The course will describe the mechanisms underlying the processes that shape the earth and drive its evolution, including climate, tectonics, hydrology, glaciers, and geomorphology. The course will combine lectures, field data collection, data analysis, and lab activities.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Degree Electives

Rule: Must complete 17 credits from the following courses:

	Course	**Credits**

	GEO 305 - Igneous & Metamorph Petrology Offered spring. Prereq., GEO 225, CHMY 143N. Igneous rock associations, igneous processes and origins; metamorphic minerals and phase relationships, metamorphic zones, facies, and conditions; metamorphic environments, metallic minerals and mineral deposits.	4 Credits
	GEO 309 - Sedimentation/Stratigraphy Offered spring. Prereq. GEO 211, 225. Origins of sediments and sedimentary rocks; climate, weathering, and weathering products; transport, deposition, and depositional environments of sediments; concepts and methods of stratigraphy including correlation of sedimentary rocks and an introduction to basin analysis.	4 Credits
	GEO 311 - Paleobiology Offered spring. Prereq. GEO 101N or equiv. level Biology. Survey of the major groups of organisms in the geologic record and hands-on study of fossils; application of geologic and biologic data and principles to solve problems in geoscience and bioscience.	3 Credits
	GEO 320 - Global Water Offered autumn. Prereq. one semester of college chemistry, WRIT 101 or equiv., and completion of one writing course. Water is necessary for life. Without it, life as we know it cannot exist. This course discusses the chemistry of water as it moves through the hydrological cycle. We discuss how water chemistry evolves through atmospheric water, rain water, ground water, surface water, and sea water. Students will have an understanding of the chemical attributes of water in major water reservoirs. Class discussions, formal and informal writing assignments, a short laboratory experiment, and a field trip highlight examples of water chemistry. Students will use excel to solve problems and will learn citation conventions relevant for scientific writing.	4 Credits
	GEO 327 - Geochemistry Offered alternate years. Prereq. one year of college chemistry, one semester of calculus, and one semester of physical geology, or consent of instructor. One semester of mineralogy recommended. The chemical properties of elements control their geological distribution and underlie the basic physical properties of rocks. An understanding of geochemistry will help students understand water chemistry, sediment geochemistry, and igneous petrology. The course covers chemical principles applied to geologic materials and processes, including the origin and chemical composition of earth, atmosphere, and hydrosphere. Principles of stable and radiogenic isotope geochemistry are discussed. Students will use excel to solve problems. Class discussions, problems sets, and exams are used to assess student performance.	4 Credits
	GEO 420 - Hydrogeology Offered spring. Prereq., GEO 101N-102N; PHSX 205N/206N or PHSX 215N/216N ; M 162 or 171 strongly recommended or consent of instr. Occurrence, movement, quality, and methods of quantification of groundwater. Geological framework and physics of groundwater flow. Supply, contamination, and management problems.	4 Credits

	GEO 433 - Global Tectonics Offered autumn. Prereq., GEO 315, M 162, and 2.25 or better overall GPA in geosciences courses. Geodynamics and tectonics of the Earth and other planets. Course material includes methods of observing tectonic processes and tectonic phenomena, both at the surface and in the deep earth, over a wide range of time scales.	3 Credits
	GEO 460 - Process Geomorphology Offered autumn. Prereq., one semester college calculus and physics. Quantitative examination of landforms, runoff generation, weathering, mechanics of soil erosion by water and wind, mass wasting, glacial and periglacial processes and hillslope evolution.	4 Credits
	GEO 491 - Special Topics (R-8) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses or one-time offerings of current topics.	1 To 8 Credits
Minimum Required Grade: C-		17 Total Credits Required

Physics

Rule: Must complete 1 of the following sequences

10 Total Credits Required

Physics

Rule: May complete the following sequence

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits

	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics with Calculus

Rule: May complete the following sequence

	Course	Credits
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Chemistry

Rule: Must complete 1 of the following subcategories

8-10 Total Credits Required

Chemistry Option 1

Rule: May complete all of the following courses

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
Minimum Required Grade: C-		8 Total Credits Required

Chemistry Option 2

Rule: May complete all of the following courses

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

Math

Rule: Must complete 1 of the following subcategories

7-8 Total Credits Required

Math Option 1

Rule: May complete the following 2 courses

	Course	Credits

	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 263 - Applied Differential Equations Offered spring. Prereq., one of M 162, 171 or 181 and knowledge of basic trigonometry. Solution of ordinary differential equations and systems with emphasis on applications, numerical methods and computer software.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Math Option 2

Rule: May complete the following 2 courses

	Course	Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Computer Science

Rule: Must complete 1 of the following courses

	Course	Credits
	CSCI 250 - Computer Mdlng/Science Majors Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.	3 Credits

	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Writing

Rule: Must complete the following course

Note: This course is recommended to complete the upper division writing requirement in Geosciences but students may also select from the university-approved list of upper division writing courses to fulfill this requirement.

	Course	**Credits**
	GEO 320 - Global Water Offered autumn. Prereq. one semester of college chemistry, WRIT 101 or equiv., and completion of one writing course. Water is necessary for life. Without it, life as we know it cannot exist. This course discusses the chemistry of water as it moves through the hydrological cycle. We discuss how water chemistry evolves through atmospheric water, rain water, ground water, surface water, and sea water. Students will have an understanding of the chemical attributes of water in major water reservoirs. Class discussions, formal and informal writing assignments, a short laboratory experiment, and a field trip highlight examples of water chemistry. Students will use excel to solve problems and will learn citation conventions relevant for scientific writing.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Languages

Rule: UM outgoing students must complete the following language sequence (the "test out provision" applies as administered by the Department of Modern and Classical Languages and Literatures).

	Course	**Credits**
	GRMN 101 - Elementary German I Offered autumn. Emphasis on oral communication, with development in all major skill areas: listening, speaking, reading, and writing.	4 Credits
	GRMN 102 - Elementary German II Offered spring. Prereq., GRMN 101. Emphasis on oral communication, with continuing development in all major skill areas: listening, speaking, reading, and writing.	4 Credits

Minimum Required Grade: C-	8 Total Credits Required

Overseas Coursework

Rule: Must complete the following courses and field work at Potsdam University

Note: In addition to Geosciences coursework completed at UM students must complete the following:
1. Selection of one field course run by Potsdam University listed below
1a. BP 15 (Field Course - France)
1b. BW01 (Field Course - Norway)
1c. BW02 (field Course - Alps)
2. Any 4 of the following courses offered by Potsdam University
2a. Regional Geology
2b. Paleoclimate @ Quaternary Geology
2c. Analysis of Geologic Maps
2d. Analytic Geochemistry
2e. Natural Hazards
2f. Tectonophysics & Rheology
2g. Seismology
2h. Seismics
2i. Geoelectrics
2j. Sedimentary Systems & Stratigrahic Geomorphology
2k. Tectonics and Geodynamics
3. 2 additional cognate science courses to be taken at Potsdam University

Minimum Required Grade: C-

27-30 Total Credits Required

International Field Geosciences Joint

Bachelor of Science - International Field Geos Joint

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 67

Required Cumulative GPA: 2.0

Note: This degree is designed specifically for students who seek to combine a rigorous education in the Geosciences with a yearlong international Geosciences experience and an emphasis on field-based learning. It requires attending classes and living overseas. Most of the course work completed during the year abroad will take place at University College Cork (UCC) in Ireland. For students who satisfy all degree requirements, a joint B.S. degree in International Field Geosciences will be awarded by The University of Montana and the University College Cork.

Lower Division Core

Rule: Must complete all of the following courses

Note: .

	Course	**Credits**
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits

	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
	GEO 211 - Earth's History and Evolution Offered autumn and spring. Prereq., GEO 101N and GEO 102N. Traces the history of the Earth since its inception 4.6 billion years ago. Presents scientific theories for the origin of the Earth and the nature of important earth shaping events of the past, including the development of the oceans, atmosphere, and climate.	4 Credits
	GEO 225 - Earth Materials Offered autumn. Prereq., GEO 101N, GEO 102N, and CHMY 121N or 141N. Study of minerals and rocks utilizing an Earth Systems approach; mineral identification and paragenesis; survey of the distribution of minerals from the interior to the surfaces of planets and the processes that led to their formation.	4 Credits
Minimum Required Grade: C-		12 Total Credits Required

Upper Division Core

Rule: Must complete all of the following subcategories
Minimum Required Grade: C-
12 Total Credits Required

Subcategory 1

Rule: Must complete all of the following courses

	Course	Credits
	GEO 315 - Structural Geology Offered autumn. Prereq., GEO 211, 225. Structures of deformed rocks; mechanical principles; graphical interpretation of structural problems, tectonic principles.	4 Credits
	GEO 318 - Surface Processes Offered spring. Prereq., GEO 101/102, GEO 211, M 162 or M 171, and PHSX 205/206 or PHSX 215/216. This course will introduce students to the study of the earth using the laws and principles of physics. The course will describe the mechanisms underlying the processes that shape the earth and drive its evolution, including climate, tectonics, hydrology, glaciers, and geomorphology. The course will combine lectures, field data collection, data analysis, and lab activities.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Subcategory 2

Rule: Must complete 1 of the following courses

	Course	Credits
	GEO 309 - Sedimentation/Stratigraphy Offered spring. Prereq. GEO 211, 225. Origins of sediments and sedimentary rocks; climate, weathering, and weathering products; transport, deposition, and depositional environments of sediments; concepts and methods of stratigraphy including correlation of sedimentary rocks and an introduction to basin analysis.	4 Credits
	GEO 443 - Prin of Sedimentary Petrology Offered autumn. Prereq., GEO 225 or graduate standing. Field, hand specimen and thin section petrology of siliciclastic and carbonate rocks, emphasis on tectonic and diagenetic interpretation of siliciclastic rock and environments of deposition and diagenesis of carbonate rocks.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Degree Electives

Rule: Must complete 15 credits from the following courses:

	Course	Credits
	GEO 305 - Igneous & Metamorph Petrology Offered spring. Prereq., GEO 225, CHMY 143N. Igneous rock associations, igneous processes and origins; metamorphic minerals and phase relationships, metamorphic zones, facies, and conditions; metamorphic environments, metallic minerals and mineral deposits.	4 Credits
	GEO 309 - Sedimentation/Stratigraphy Offered spring. Prereq. GEO 211, 225. Origins of sediments and sedimentary rocks; climate, weathering, and weathering products; transport, deposition, and depositional environments of sediments; concepts and methods of stratigraphy including correlation of sedimentary rocks and an introduction to basin analysis.	4 Credits
	GEO 311 - Paleobiology Offered spring. Prereq. GEO 101N or equiv. level Biology. Survey of the major groups of organisms in the geologic record and hands-on study of fossils; application of geologic and biologic data and principles to solve problems in geoscience and bioscience.	3 Credits

	GEO 320 - Global Water Offered autumn. Prereq. one semester of college chemistry, WRIT 101 or equiv., and completion of one writing course. Water is necessary for life. Without it, life as we know it cannot exist. This course discusses the chemistry of water as it moves through the hydrological cycle. We discuss how water chemistry evolves through atmospheric water, rain water, ground water, surface water, and sea water. Students will have an understanding of the chemical attributes of water in major water reservoirs. Class discussions, formal and informal writing assignments, a short laboratory experiment, and a field trip highlight examples of water chemistry. Students will use excel to solve problems and will learn citation conventions relevant for scientific writing.	4 Credits
	GEO 327 - Geochemistry Offered alternate years. Prereq. one year of college chemistry, one semester of calculus, and one semester of physical geology, or consent of instructor. One semester of mineralogy recommended. The chemical properties of elements control their geological distribution and underlie the basic physical properties of rocks. An understanding of geochemistry will help students understand water chemistry, sediment geochemistry, and igneous petrology. The course covers chemical principles applied to geologic materials and processes, including the origin and chemical composition of earth, atmosphere, and hydrosphere. Principles of stable and radiogenic isotope geochemistry are discussed. Students will use excel to solve problems. Class discussions, problems sets, and exams are used to assess student performance.	4 Credits
	GEO 420 - Hydrogeology Offered spring. Prereq., GEO 101N-102N; PHSX 205N/206N or PHSX 215N/216N ; M 162 or 171 strongly recommended or consent of instr. Occurrence, movement, quality, and methods of quantification of groundwater. Geological framework and physics of groundwater flow. Supply, contamination, and management problems.	4 Credits
	GEO 433 - Global Tectonics Offered autumn. Prereq., GEO 315, M 162, and 2.25 or better overall GPA in geosciences courses. Geodynamics and tectonics of the Earth and other planets. Course material includes methods of observing tectonic processes and tectonic phenomena, both at the surface and in the deep earth, over a wide range of time scales.	3 Credits
	GEO 443 - Prin of Sedimentary Petrology Offered autumn. Prereq., GEO 225 or graduate standing. Field, hand specimen and thin section petrology of siliciclastic and carbonate rocks, emphasis on tectonic and diagenetic interpretation of siliciclastic rock and environments of deposition and diagenesis of carbonate rocks.	4 Credits
	GEO 460 - Process Geomorphology Offered autumn. Prereq., one semester college calculus and physics. Quantitative examination of landforms, runoff generation, weathering, mechanics of soil erosion by water and wind, mass wasting, glacial and periglacial processes and hillslope evolution.	4 Credits
	GEO 491 - Special Topics (R-8) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses or one-time offerings of current topics.	1 To 8 Credits

Minimum Required Grade: C-	15 Total Credits Required

Physics

Rule: Must complete 1 of the following sequences

10 Total Credits Required

Physics

Rule: May complete the following sequence

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics with Calculus

Rule: May complete the following sequence

	Course	Credits

	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Chemistry

Rule: Must complete 1 of the following subcategories

8-10 Total Credits Required

Chemistry Option 1

Rule: May complete all of the following courses

	Course	**Credits**
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits

Minimum Required Grade: C-	8 Total Credits Required

Chemistry Option 2

Rule: May complete all of the following courses

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

Math

Rule: Must complete 1 of the following subcategories

7-8 Total Credits Required

Math Option 1

Rule: May complete the following 2 courses

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 263 - Applied Differential Equations Offered spring. Prereq., one of M 162, 171 or 181 and knowledge of basic trigonometry. Solution of ordinary differential equations and systems with emphasis on applications, numerical methods and computer software.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Math Option 2

Rule: May complete the following 2 courses

	Course	Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Computer Science

Rule: Must complete 1 of the following courses

	Course	Credits
	CSCI 250 - Computer Mdlng/Science Majors Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.	3 Credits
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Writing

Rule: Must complete the following course

Note: This course is recommended to complete the upper division writing requirement in Geosciences but students may also select from the university-approved list of upper division writing courses to fulfill this requirement.

	Course	Credits
	GEO 320 - Global Water Offered autumn. Prereq. one semester of college chemistry, WRIT 101 or equiv., and completion of one writing course. Water is necessary for life. Without it, life as we know it cannot exist. This course discusses the chemistry of water as it moves through the hydrological cycle. We discuss how water chemistry evolves through atmospheric water, rain water, ground water, surface water, and sea water. Students will have an understanding of the chemical attributes of water in major water reservoirs. Class discussions, formal and informal writing assignments, a short laboratory experiment, and a field trip highlight examples of water chemistry. Students will use excel to solve problems and will learn citation conventions relevant for scientific writing.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Languages

Rule: Must complete 1 of the following subcategories (the "test out provision" applies as administered by the Department of Modern and Classical Languages and Literatures).

6-10 Total Credits Required

German

Rule: May complete the following language sequence

	Course	Credits
	GRMN 101 - Elementary German I Offered autumn. Emphasis on oral communication, with development in all major skill areas: listening, speaking, reading, and writing.	4 Credits
	GRMN 102 - Elementary German II Offered spring. Prereq., GRMN 101. Emphasis on oral communication, with continuing development in all major skill areas: listening, speaking, reading, and writing.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Irish

Rule: May complete the following language sequence

	Course	Credits

	ENIR 101 - Elementary Irish I Offered autumn or spring. Same as IRSH 101. This course represents an introduction to modern Irish in both its spoken and written forms: basic principles of grammar and sentence structure are covered. Emphasis is placed on the application of these principles in every-day situations. The General Education Modern & Classical Languages requirement can be fulfilled by successful completion of 101, 102 and 103. For proficiency equal to the 202-level, students must take the five semester sequence (101, 102, 103, 201, & 202) of Irish language study.	3 Credits
	ENIR 102 - Elementary Irish II Offered autumn or spring. Same as IRSH 102. The primary objective of this course is to build on the foundations laid in Elementary Irish I. Students will expand their vocabulary with a special focus on verbs; they will also engage new themes that demand a corresponding increase in their store of nouns, adjectives, idioms and expressions. The General Education Modern & Classical Languages requirement can be fulfilled by successful completion of 101, 102 and 103. For proficiency equal to the 202-level, students must take the five semester sequence (101, 102, 103, 201, & 202) of Irish language study.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Overseas Coursework

Rule: Must complete the following courses and field work at University College of Cork and Potsdam University

Note: In addition to Geosciences coursework completed at UM students must complete the following:
1. 1 formal field course module run by University College Cork, selected from
1a. GL 2016 (Easter Field Course - Dingle Peninsula)
1b. GL 3019 (Easter Field Course - Western Scotland)
1c, ER 3002 (Easter Field Course - North Clare)
1d. GL 4008 (Easter Field Course - Central Greece)
1e. another equivalent-level field course run by UCC and approved apriori by their UCC and UM advisors
2. While in residence at Cork, students must complete any 9 of the following courses in consultation with their UCC and UM advisors
2a. Sed Processes and Petrology
2b. Igneous and MM Petrology
2c. Invertebrate Paleontology & Evolution
2d. Plate Tectonics & Global Geophysics
2e. Igneous Petrogenesis & Geochemistry
2f. Metamorphism & Geochronology
2g. Advanced Structural Geology
2h. Sedimentary Environments
2i. Stratigraphy & Geologic Maps
2j. Environmental Geology
2k. Terr Ecosystems Through Time
2l. Micropaleontology & Palynology
2m. Petroleum Geology & Basin Analysis
2n. Applied Geophysics & Computer Applications
2o. Advanced Igneous Petrology
2p. Hydrogeology
3. 1 formal upper-level Geosciences course at Potsdam University. Recommended are courses that focus on computer-based visualization or geoscience data using GIS or other visualization platforms

Minimum Required Grade: C-

33-36 Total Credits Required

Geosciences Minor

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 18
Required Cumulative GPA: 2.0

Lower Division Core Courses

Rule: Must complete all of the following
Note: This sequence of courses is recommended but alternative sequences may be approved by an advisor.

	Course	Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits
	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
	GEO 211 - Earth's History and Evolution Offered autumn and spring. Prereq., GEO 101N and GEO 102N. Traces the history of the Earth since its inception 4.6 billion years ago. Presents scientific theories for the origin of the Earth and the nature of important earth shaping events of the past, including the development of the oceans, atmosphere, and climate.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Degree Electives

Rule: Must complete an additional 10 credits in Geosciences courses numbered 200 and above
Minimum Required Grade: C-
10 Total Credits Required

Biological Sciences

Charles H. Janson, Associate Dean for the Biological Sciences

The Division of Biological Sciences has undergraduate and graduate programs representing the full range of the biological sciences. The Division offers Bachelor's degrees in Biology (with a broad array of formal options described in more detail below), Medical Laboratory Science, Microbiology including microbial ecology, Wildlife Biology (a cooperative program administered by the College of Forestry and Conservation), and Biochemistry (an interdepartmental degree administered by the Chemistry Department). The Division also advises students in pre-health sciences and offers a series of summer field courses at the University's Flathead Lake Biological Station (http://flbs.umt.edu) a year-round academic center for the ecological sciences, located 85 miles north of Missoula near Kalispell and Glacier National Park. The Division is one of the leading research units in the University. Research programs in the Division provide abundant opportunities for students to enhance their

educational experience by participating in mentored research. Several sources of funding are available to support undergraduate student research, and the Division participates in the University of Montana Conference on Undergraduate Research each spring.

Graduate degrees offered by the Division of Biological Sciences include Master of Science and Doctor of Philosophy degrees in Cellular, Molecular and Microbial Biology (CMMB), Organismal Biology and Ecology (OBE), and Systems Ecology (SE). The Division also participates in the graduate (M.S. and Ph.D.) program in Wildlife Biology, administered by the College of Forestry and Conservation and in the Ph.D. program in Biochemistry and Biophysics, administered by the Chemistry Department. Information on graduate study and program requirements is available from the Graduate School or the Division of Biological Sciences.

The Division offers a Bachelor of Science degree in **Biology** that provides a solid foundation in core areas of the biological sciences and in supporting physical sciences and mathematics. Several concentrations are provided within the B.S. biology degree:

Cellular and molecular biology: For students interested in the cellular and molecular aspects of biology, and for students interested in health-related professions.

Ecology and organismal biology: For students interested in the biology of organisms (plants and animals), populations or communities, and for students interested in veterinary school.

Field ecology: For students interested in field-based ecology. Students with this option spend one or two summers taking field courses at the Flathead Lake Biological Station.

Genetics and evolution: For students interested in all aspects of genetics, as well as evolutionary biology, and for students interested in health-related professions.

Human biological sciences: Provides a strong background in the biological sciences for students interested in pursuing further study in a health sciences professional program.

The Division also offers a Bachelor of Arts degree in Biology with the following concentrations:

Natural history: For students who would like to combine basic natural history and biological sciences with another field such as art, journalism, or creative writing.

Biological Education and General Sciences Broadfield: Two separate options designed for students interested in a career teaching biology or all sciences at the secondary (middle or high school) level.

The Division also offers a Bachelor of Science degree in **Microbiology**. Microbiology is the study of microorganisms, including bacteria, yeasts, molds, viruses, protozoa and other microscopic parasites. The Bachelor's degree in Microbiology is offered as a general degree or with an option in microbial ecology. The general option emphasizes microbial structure, function, and interactions and relationships with humans. The microbial ecology option emphasizes microbial structure, function, and interactions and relationships with the environment and other organisms.

The Division also offers a Bachelor of Science degree in **Medical Laboratory Science** (Michael Minnick, Professor of Microbiology, Advisor). Medical Laboratory Science or clinical laboratory science is a combined study of chemistry, physiology and microbiology (http://www.umt.edu/medtech/). A medical laboratory scientist performs chemical, microscopic, and microbiological procedures used in the diagnosis, study and treatment of human disease. Medical laboratory scientist are in high demand in hospital, clinical labs, research institutions and government health departments. Certification is required for clinical practice.

To become certified, a student, after satisfying the minimum course requirements, serves a clinical practicum of at least 12 consecutive months in a school of medical laboratory science accredited by the National Accrediting Agency for Clinical Laboratory Sciences (NAACLS). After completing a clinical practicum and passing the American Society for Clinical Pathology (ASCP) Board of Certification examination, the student is certified as a Medical Laboratory Scientist [MLS(ASCP)].

The University of Montana has two coursework tracks for the Medical Laboratory Science B.S. degree. The 3+1 track includes the practicum at one of our affiliated programs as part of the degree, while the practicum is not included in the 4+1 track.

Degree requirements for all three majors and courses are described below (see the College of Forestry and Conservation for information about Wildlife Biology and the Biochemistry Program in the College of Humanities and Sciences for information about Biochemistry).

The Division of Biological Sciences is committed to providing coursework and experiences for non-science majors. The world faces many problems and opportunities that include significant biological components. Courses for non-science majors have the goal of fostering understanding of the process of science and enhancing biological knowledge as it relates to environmental, medical, social, and other issues. A number of introductory courses are open both to majors and non-majors. In addition, the Division offers courses designed specifically for non-majors: Microbiology for Health Sciences, Introductory Ecology, Survey of Montana Wildlife and Habitats, and others.

Department Faculty

Professor

Creagh Breuner, Professor

Jedediah Brodie, Assistant Professor; John Craighead Endowed Chair of Conservation
Ragan Callaway, Professor
Matthew Church, Associate Professor
Chris Comer, Dean / Professor
James Elser, Bierman Professor, Director of the Flathead Lake Biological Station
Douglas Emlen, Professor
Willard Granath Jr., Professor
Erick Greene, Professor
F. Richard Hauer, UM Director-Institute on Ecosystems
Jesse Hay, Professor, DBS
William Holben, Professor
Charles Janson, Associate Dean / Professor
J. Stephen Lodmell, Professor
Gordon Luikart, Professor of Conservation Ecology and Genetics
John Maron, Professor
Michael Minnick, Professor
Jack Nunberg, Professor and Director of MBC
Frank Rosenzweig, Professor
Anna Sala, Professor
D. Scott Samuels, Professor
Stephen Sprang, Professor, DBS & Director, CBSD
H. Maurice Valett, Professor of Systems Ecology

Associate Professor

Sarah Certel, Assistant Professor, DBS
Lila Fishman, Associate Professor
Jeffrey Good, Assistant Professor
Mark Grimes, Associate Professor, DBS
Winsor Lowe, Associate Professor
John McCutcheon, Associate Professor
Scott Miller, Associate Professor
Brent Ryckman, Associate Professor
Bret Tobalske, Associate Professor, Director Field Research Station
Scott Wetzel, Associate Professor
Art Woods, Associate Professor

Assistant Professor

Zachary Cheviron, Assistant Professor
Brandon S. Cooper, Assistant Professor
Ekaterina Voronina, Assistant Professor

Lecturer

Heather Labbe, Lecturer
Laurie A. Minns, Lecturer, Division of Biological Sciences
Kevin Murray, Lecturer

Research Faculty

Jim Battisti
Shawn Devlin, Assistant Research Professor
Dan Drecktrah, Assistant Research Professor
Bonnie Ellis, Assistant Research Professor
Jay Evans, Research Professor, Director of CTM
Matthew Herron, Research Assistant Professor
John S. Kimball, Professor - Systems Ecology
Eugene Kroll, Research Associate Professor
Penelope Kukuk, Retired Research Professor
Jean-Marc Lanchy, Research Assistant Professor
Erin Landguth, Assistant Research Professor
Tung-Chung Mou, Assistant Research Professor
Daniel Mummey
Dean Pearson, Research Ecologist - USFS
Alyson Smith, Assistant Research Professor

Barbara Wright, Retired Research Professor

Affiliates

Ashley Ballantyne, Assistant Professor of Bioclimatology
Len Broberg, Professor, EVST Program Director
Barry Brown, Head of Access and Collection Services; Science Librarian
James Burchfield, Professor of Forest Social Sciences
Cory Cleveland, Professor, Terrestrial Ecosystem Ecology; Chair, Department of Ecosystems & Conservation Sciences
Robert Crabtree, Research Associate Professor
Solomon Dobrowski, Associate Professor of Forest Landscape Ecology
Lisa Eby, Associate Professor of Aquatic Vertebrate Ecology; Undergraduate Program Director, Ecosystem Science & Restoration
Kelsey Jencso, Assistant Professor, Watershed Hydrologist
Ulrich Kamp, Professor
Anna Klene, Professor
Henriette Lowisch, Associate Professor

Biology-General

Back to Top

- **BIOB 101N - Discover Biology**
  Credits: 3. Offered every term. Contemporary exploration of the organization and complexity of living organisms and the systems in which they live. The central question of biology--relationship between form and function, acquisition and use of energy, and continuity between generations will be addressed through lectures and laboratory investigations. Credit not allowed toward a major in biology. Credit not allowed for both BIOB 101N and BIOB 160N. Course Attributes: Natural Science Lab Course (N) Natural Science Course (N)
- **BIOB 130N - Evolution and Society**
  Credits: 3. Offered intermittently. A focus on relationships between evolutionary biology and important social issues, including the evolution of drug-resistant diseases, the construction and use of genetically-modified organism, human evolutionary biology, and experimental laboratory evolution. Course Attributes: Natural Science Course (N)
- **BIOB 160N - Principles of Living Systems**
  Credits: 3. Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction,

genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N. Course Attributes: Natural Science Course (N)

- BIOB 161N - Prncpls of Living Systems Lab

  Credits: 1. Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing. Course Attributes: Natural Science Lab Course (N)
  Natural Science Course (N)

- BIOB 170N - Princpls Biological Diversity

  Credits: 3. Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals. Course Attributes: Natural Science Course (N)

- BIOB 171N - Princpls Biological Dvrsty Lab

  Credits: 2. Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships. Course Attributes: Natural Science Lab Course (N) Natural Science Course (N)

- BIOB 191 - Special Topics

  Credits: 1 TO 6. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BIOB 191N - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: Internships/Practicums

- BIOB 198 - Internship

  Credits: 1 TO 6. Prereq., consent of Division. Extended classroom experience that provides practical application of learning during placement off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- BIOB 226N - Gen Science: Earth & Life Sci

  Credits: 5. Offered spring. Prereq., PHSX 225N and M 132 or M 135 or equiv. Integrated lectures, laboratory exercises, and field trips on topics in earth and biological science for prospective elementary school teachers and the non-scientist. A two-hour laboratory session is required each week and one or two Saturday field trips. Course Attributes: Natural Science Lab Course (N)
  Natural Science Course (N)

- BIOB 260 - Cellular and Molecular Biology

  Credits: 4. Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.

- BIOB 272 - Genetics and Evolution

  Credits: 4. Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.

- BIOB 291 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BIOB 298 - Internship

  Credits: 1 TO 6. Offered intermittently. Prereq., consent of Division. Extended classroom experience that provides practical application of learning during placement off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A

maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- BIOB 301 - Developmental Biology

  Credits: 3. Offered autumn. Prereq., BIOB 260; BIOB 272 recommended. An analysis of the origin and development of form and patterns in organisms, stressing the processes of growth and differentiation in plants and animals. Graded traditional letter grade only.

- BIOB 375 - General Genetics

  Credits: 3. Offered spring. Prereq., BIOB 260 and 272. This course will focus on the molecular genetics of eukaryotes, with special emphasis on transmission genetics and gene structure and regulation.

- BIOB 390 - Undergrad Research

  Credits: 1 TO 10. (R-10) Offered every term. Prereq., consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit. Course Attributes: Research & Creative Schlrshp

- BIOB 391 - Special Topics

  Credits: 1 TO 10. (R-10) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BIOB 392 - Independent Study

  Credits: 1 TO 10. (R-10) Offered every term. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BIOB 398 - Internship

  Credits: 1 TO 6. Offered every term. Prereq., consent of the Division. Extended classroom experience that provides practical application of learning during placement off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- BIOB 410 - Immunology

  Credits: 3. Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.

- BIOB 411 - Immunology Laboratory

  Credits: 2. Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.

- BIOB 425 - Adv Cell & Molecular Biology

  Credits: 3. Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.

- BIOB 440 - Biological Electron Microscopy

  Credits: 2. Offered spring. Prereq., senior standing or consent of instr. Theory of electron microscopy, recent developments in transmission and scanning electron microscopy. Limited experience with the instruments.

- BIOB 468 - Endocrinology

  Credits: 3. Offered alternate years. Prereq., BIOB 260 and 272. Integration of fundamental concepts of endocrinology (such as hormone release, hormone transport and receptor activation) into complex systems (such as reproduction).

- BIOB 480 - Conservation Genetics

  Credits: 3. Offered intermittently. Prereq., BIOB 272. Genetic basis for solving biological problems in conservation including the genetics of small populations, the application of molecular genetic techniques to conservation biology and case studies of the application of genetics to conservation problems.

- BIOB 483 - Phylogenics and Evolution

  Credits: 3. Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies

from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.

- BIOB 486 - Genomics

  Credits: 3. Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.

- BIOB 488 - Programming for Biology

  Credits: 3. Offered spring. Prereq., BIOB 486 or A- or higher in BIOB 272. An introduction to computer programming using genomic and evolutionary examples. No prior programming experience expected or required.

- BIOB 490 - Adv Undergrad Research

  Credits: 1 TO 10. (R-10) Offered every term. Prereq., junior or senior standing and consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit. Course Attributes: Research & Creative Schlrshp

- BIOB 491 - Special Topics

  Credits: 1 TO 10. (R-10) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BIOB 492 - Independent Study

  Credits: 1 TO 10. Offered every term. Prereq., consent of instr. Independent work under the University omnibus option. See index. Course Attributes: Omnibus Course

- BIOB 494 - Seminar in Biology

  Credits: 1. (R-3) Offered intermittently. Prereq., consent of instr. A review and discussion of current research. Topics vary.

- BIOB 498 - Internship

  Credits: 1 TO 6. Offered every term. Prereq., consent of the Division. Extended classroom experience that provides practical application of learning during placement off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- BIOB 499 - Undergraduate Thesis

  Credits: 3 TO 6. (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.

- BIOB 505 - OBE Core Course - Genetics and Evolution

  Credits: 3. Offered alternate years. Prereq., graduate standing. Exploration of the fundamental concepts and approaches in evolutionary biology and evolutionary genetics. Lectures and discussions, with an emphasis on primary literature, classic and contemporary. Level: Graduate

- BIOB 506 - OBE Core Course - Ecology

  Credits: 3. Offered alternate years. Prereq., graduate standing. Broad overview of population and community ecology. Lectures and discussions, introducing theoretic foundations and exploring classic and more recent empirical tests of theory. Level: Graduate

- BIOB 507 - OBE Core Course - Organismal Function

  Credits: 3. Offered alternate years. Prereq., graduate standing. Exploration of the physical and chemical mechanisms that underlie the relationship between form and function in organisms. Lectures and discussions are pursued using a comparative, ecological and evolutionary framework. Level: Graduate

- BIOB 513 - Community Ecology

  Credits: 3. Offered alternate years. Prereq., BIOE 370 or equiv., consent of instr. Current concepts of species interactions, succession, food webs, temporal and spatial patterns and quantitative characterization of community structure. Level: Graduate

- BIOB 518 - Plant-Consumer Interactions

Credits: 3. Offered alternate years. Prereq. BIOE 370 or equiv. Ecology and evolution of plant-consumer interactions. Review of classic and contemporary literature on plant-consumer interactions. Level: Graduate

- BIOB 522 - Rdgs Morph, Phys, and Zool

  Credits: 1. (R-8) Prereq., graduate standing and consent of instr. Review and discussion of current literature in the fields of morphology, physiology, and ecology. Level: Graduate

- BIOB 524 - Physiological Plant Ecology

  Credits: 3. Offered alternate years. Prereq., BIOE 370 and BIOO 433. The physiological basis of plant adaptation and response to the environment. Level: Graduate

- BIOB 526 - Trends in Plant Ecology

  Credits: 2. (R-16) Prereq., graduate standing. Current concepts, theory, and experiments in plant ecology. Level: Graduate

- BIOB 541 - Electron Microscopy Lab

  Credits: 1 TO 6. (R-6) Prereq. or coreq., BIOB 440 or equiv. Practical laboratory experience in the preparation of various samples and hands-on operation of the transmission and/or scanning electron microscopes. Level: Graduate

- BIOB 547 - Exptl Mol/Cell/Chem Biol

  Credits: 1. (R-8) Offered every term. Prereq., graduate standing or consent of instr. Focus on experimental design, methods, and presentation of experimental results for graduate students in laboratories with a molecular, cellular or chemical biological focus. Level: Graduate

- BIOB 551 - Environmental Field Study

  Credits: 1 TO 3. (R-3) Prereq. or coreq.,ENSC 540 or ENST 560. Same as ENSC 551. Designing, executing, and interpreting environmental studies. Project oriented. Level: Graduate

- BIOB 561 - Population Genetics Seminar

  Credits: 1 TO 2. (R-12) Prereq., consent of instr. or graduate standing. Current topics in population genetics, evolutionary biology, molecular evolution and related topics. Level: Graduate

- BIOB 565 - Membrane Dynamics Res Sem

  Credits: 1. (R-8) Offered every term. Prereq., graduate standing or consent of instr. Focus on experimental design, methods, and presentation of experimental results for students conducting research in membrane cell biology, including membrane trafficking and intracellular signaling. Level: Graduate

- BIOB 594 - Seminar in Biology

  Credits: 1. (R-6) Prereq., graduate standing or consent of instr. A review and discussion of current research in biology. Topics vary. Level: Graduate

- BIOB 595 - Special Topics

  Credits: 1 TO 4. (R-22) Prereq., graduate standing and consent of instr. Experimental offering of new courses by resident or visiting faculty. Level: Graduate

- BIOB 596 - Independent Study

  Credits: 1 TO 8. (R-8) Prereq., consent of instr. Credit for independent research project unrelated to thesis or dissertation. Level: Graduate Course Attributes: Independent Study

- BIOB 597 - Research

  Credits: 1 TO 8. (R-12) Prereq., consent of instr. Library work involved with preparation of a thesis or dissertation proposal. Level: Graduate

- BIOB 598 - Internship

  Credits: 1 TO 8. (R-8) Prereq., consent of the Division, graduate standing. Extended classroom experience that provides practical application of learning during placement off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. Level: Graduate Course Attributes: Internships/Practicums

- BIOB 599 - Thesis

  Credits: 1 TO 10. (R-10) Prereq., masters student in biology. Field and laboratory research on, and writing of, a student's master's thesis. Level: Graduate

- BIOB 699 - Dissertation

  Credits: 1 TO 10. (R-20) Prereq., doctoral student in biology. Credit for field and laboratory research on, and writing of, a student's doctoral dissertation. Level: Graduate

Biology - Ecological

Back to Top

- BIOE 172N - Introductory Ecology

  Credits: 3. Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems. Course Attributes: Natural Science Course (N)

- BIOE 342 - Field Ecology

  Credits: 5. Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.

- BIOE 370 - General Ecology

  Credits: 3. Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).

- BIOE 371 - Gen Ecology Lab (equiv to 271)

  Credits: 2. Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.

- BIOE 394 - Seminar/Workshop

  Credits: 2. Offered autumn. Preparatory readings and attendance at seminars on a wide variety of ecological and wildlife management topics followed by critiques.

- BIOE 403 - Vert Design & Evolution

  Credits: 5. Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.

- BIOE 406 - Behavior & Evolution

  Credits: 3. Offered autumn. Prereq., BIOB 272. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies.

- BIOE 409 - Behavior & Evolution Discussion

  Credits: 1. Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.

- BIOE 416 - Alpine Ecology

  Credits: 3. Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Distribution, abundance and life cycles of plants and animals and their unique ecophysiological adaptations to life in the rigorous environments of the high mountains above the timberline, with emphasis on the Crown of the Continent area.

- BIOE 428 - Freshwater Ecology

  Credits: 5. Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.

- BIOE 439 - Stream Ecology

Credits: 3. Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N. The biota and biogeochemical processes of running waters with unifying principles and contemporary research approaches.

- BIOE 440 - Conservation Ecology

  Credits: 3. Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Concepts and approaches for sustaining biodiversity and other natural goods and services provided by terrestrial and aquatic systems.

- BIOE 447 - Terrestrial Ecosystem Ecology

  Credits: 3. Offered intermittently. Prereq., BIOB 160N and any ecology-themed course or consent of instr. Introduction to systems thinking and the ecosystem concept, review of water and energy balance, carbon cycling and production processes, nutrient cycling, trophic dynamics, and species effects on ecosystem functioning.

- BIOE 448 - Terrestrial Plant Ecology

  Credits: 4. Offered alternate autumn. Prereq. BIOB 272N. The interrelationships between plants and plant communities and their natural environment.

- BIOE 449 - Plant Biogeography

  Credits: 3. Offered intermittently. Prereq., consent of instr. Description of the distribution of plants and animals at global, continental and regional scales. Analysis of ecological and historical factors influencing distribution and association.

- BIOE 451 - Landscape Ecology

  Credits: 3. Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Biophysical processes that determine landscape and ecosystem structure and function using remote sensing tools, geographic information systems and dynamic models to demonstrate landscape change.

- BIOE 453 - Ecology of Small & Large Lakes

  Credits: 3. Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N and CHMY 123N. The physical, chemical and biological characteristics of lake ecosystems with an emphasis on nutrient cycling, food web interactions and water quality.

- BIOE 458 - Forest and Grassland Ecol

  Credits: 3. Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Patterns and processes of the forests and grasslands of the northern Rocky Mountains in the context of principles of population community and ecosystem ecology.

- BIOE 490 - Adv Undergrad Research

  Credits: 1 TO 10. (R-10) Offered every term. Prereq., junior or senior standing and consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit.

- BIOE 594 - Seminar

  Credits: 1 TO 4. (R-12). Offered intermittently. Prereq. graduate standing. Presentations by student, faculty, and associates on issues and topics in their field. Level: Graduate

Biology-Human

Back to Top

- BIOH 112 - Human Form and Function I

  Credits: 3. Offered autumn. Explores the fundamentals of structure and function at basic cellular and tissue levels, in addition to the anatomy and physiology of the integumentary, musculoskeletal, and nervous systems.

- BIOH 113 - Human Form and Function II

  Credits: 3. Offered spring. Explores the fundamental structures and functions of the endocrine, cardiovascular, respiratory, digestive, urinary and reproductive systems.

- BIOH 191 - Special Topics

  Credits: 1 TO 6. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BIOH 280 - From Molecules to Mind - Fundamentals of Neuroscience

Credits: 3. Course will focus on the molecular and cellular underpinnings of the functions of the brain and nervous system. The topics will range from the basis of electrical and chemical signaling to the organization of the sensory systems and mechanisms involved in learning, memory, and complex behaviors.

- BIOH 291 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BIOH 365 - Human AP I for Health Profsns

  Credits: 0 TO 4. Offered autumn. Prereq., CHMY 121N or CHMY 141N; BIOB 160N or BIOH 112 or 113. Introduction to basic cellular structure and function. The fundamental facts and concepts of the anatomy and physiology of cells and tissues, the integumentary, musculoskeletal, nervous and special senses with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.

- BIOH 370 - Human AP II for Health Profsns

  Credits: 0 TO 4. Offered spring. Prereq., BIOH 365. The fundamental facts and concepts of the anatomy and physiology of the endocrine, circulatory, respiratory, digestive, urinary and reproductive systems with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.

- BIOH 398 - Internship

  Credits: 1 TO 6. Offered intermittently. Prereq., consent of the Division. Extended classroom experience that provides practical application of learning during placement off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internship graduation limit 6

- BIOH 405 - Hematology

  Credits: 3. Offered autumn. Prereq., junior level or consent of instr., BIOM 360. Study of blood and diseases of the circulatory system. Blood banking and serology.

- BIOH 423 - TA: Form & Function I

  Credits: 1 TO 3. (R-4) Offered autumn. Prereq., "A" or "B" in BIOH 112 and 113 and/or one year upper division anatomy and physiology coursework with cadaver lab. Consent of instr. This select group of students teaches regularly scheduled cadaver lab prosection experiences for students enrolled in BIOH 112; assists in preparation and grading of lecture and laboratory visit teaching materials; and assists with proctoring and grading exams of undergraduate students enrolled in BIOH 112.

- BIOH 424 - TA: Form & Function II

  Credits: 1 TO 3. (R-4) Offered spring. Prereq., "A" or "B" in BIOH 112 and 113 and/or one year upper division anatomy and physiology coursework with cadaver lab. Consent of instr. This select group of students teaches regularly scheduled cadaver lab prosection experiences for students enrolled in BIOH 113; assists in preparation and grading of lecture and laboratory visit teaching materials; and assists with proctoring and grading exams of undergraduate students enrolled in BIOH 113.

- BIOH 456 - Cadaver Dissection I

  Credits: 2. Offered autumn. Prereq., "A" or "B" in BIOH 365 and 370 or equivalent with cadaver experience. Consent of instr. This course is a practicum that provides the participant the ability to expand their anatomical knowledge base, professional growth, and public speaking skills. The participant will have the unique opportunity to dissect, within a small group, a region of a cadaver and present visible structures to their peers. The cadavers prepared by these students are used for teaching in DBS A&P offerings. Systems presented in autumn semester include integumentary, musculoskeletal and nervous systems.

- BIOH 457 - Cadaver Dissection II

  Credits: 2. Offered spring. Prereq., "A" or "B" in BIOH 365 and 370 or equivalent with cadaver experience, and a grade of “A” in BIOH 456. Consent of instr. This course is a practicum that provides the participant the ability to expand their anatomical knowledge base, professional growth, and public speaking skills. The participant will have the unique opportunity to dissect, within a small group, a region of a cadaver and present visible structures to their peers. The cadavers prepared by these students are used for teaching in DBS A&P offerings. Systems prepared and presented in spring semester include endocrine, cardiovascular, lymphatic, digestive, urinary and reproductive.

- BIOH 458 - Neuroscience Research

  Credits: 4. Prereq., senior standing in Neuroscience. Theory and practical experience in neuroscience experiment design, data collection, results analysis and report creation. Students will generally assist with ongoing research as well as attend formal classroom presentations and discussions. Students will be required to work with the course writing instructor to undertake the writing process and develop a primary literature review, an abstract and final report based on the experiments conducted and the data collected. Students with well-developed research ideas and skills may be allowed to undertake supplemental independent research. Course Attributes: Writing Course-Advanced

- BIOH 461 - Human Anat/Phys I Tutor/Honors

  Credits: 3. Offered autumn. Prereq., "A" or "B" in BIOH 365 or equiv. and consent of instr. This select group of students performs tutoring for students enrolled in BIOH 365; assists in preparation and grading of lecture and laboratory course teaching materials to undergraduate students enrolled in BIOH 365. Students enrolled in BIOH 461 have the option of co-enrolling in the cadaver dissection course.

- BIOH 462 - Principles Medical Physiology

  Credits: 3. Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care. Course Attributes: Writing Course-Advanced

- BIOH 463 - Human Anat/Phys II Tutor/Honor

  Credits: 3. Offered spring. Prereq., "A" or "B" in BIOH 370 or equiv. and consent of instr. This select group of students performs tutoring for students enrolled in BIOH370; assists in preparation and grading of lecture and laboratory course teaching materials to undergraduate students enrolled in BIOH 370. Students enrolled in BIOH 463 have the option of co-enrolling in the cadaver dissection course.

- BIOH 470 - Summer Clinical Laboratory

  Credits: 12. Offered summer. Prereq., successful completion of medical laboratory science 3+1 on-campus curriculum, admittance into one of our affiliated clinical practicum programs, and consent of instructor. Professional training in clinical laboratory sciences (medical laboratory science). Course Attributes: Internships/Practicums

- BIOH 471 - Professional Training I

  Credits: 13. Offered autumn. Prereq., BIOH 470. Continuation of BIOH 470. Professional training at clinical site(s). Course Attributes: Internships/Practicums

- BIOH 472 - Professional Training II

  Credits: 12. Offered spring. Prereq., BIOH 471. Continuation of BIOH 471. Professional training at clinical site(s). Course Attributes: Internships/Practicums

- BIOH 480 - Tchg Anatomy & Physiology I

  Credits: 3 TO 4. Offered autumn. Prereq., "A" or "B" in BIOH 365 and 370 or equiv. and consent of instr. This select group of students assists in preparation and grading of demonstrations and laboratory teaching materials; and provides laboratory anatomy and physiology instruction to undergraduate students enrolled in BIOH 365. Students enrolling for the 4 credit option will also provide occasional comparable assistance for BIOH 112.

- BIOH 481 - Tchg Anatomy & Physiology II

  Credits: 3 TO 4. Offered spring. Prereq., "A" or "B" in BIOH 365 and 370 or equiv. and consent of instr. This select group of students assists in the preparation and grading of demonstrations and laboratory teaching materials; and provides laboratory anatomy and physiology instruction to undergraduate students enrolled in BIOH 370. Students enrolling for the 4 credit option will also provide occasional comparable assistance for BIOH 113.

- BIOH 491 - Special Topics

  Credits: 1 TO 10. (R-10) Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

Biology

Back to Top

- BIOL 315 - Peer Advising Internship

  Credits: 1. (R-6) Offered autumn and spring. Prereq., consent of instr. Supervised training and internship for peer advisors who will gain knowledge and ability to communicate degree requirements and relate the various degree offerings to professional and career goals. No more than two credits are allowed toward upper-division major requirements.

- BIOL 435 - Comparative Animal Physiology

  Credits: 3. Offered spring. Prereq., BIOB 260 or equivalent. Animal physiology with emphasis on diversity of functional processes, with strong links to broader ecological and evolutionary contexts.

- BIOL 484 - Plant Evolution

  Credits: 3. Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.

- BIOL 492 - Seminars in Ecol & Res Man

  Credits: 1. Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371 or taken concurrently with BIOE 342. Seminar course that meets weekly for 2 hours in the evening. Includes seminar speaker and discussion.

Biology-Microbiology

Back to Top

- BIOM 135N - Hot Spring Micb: Yellowstone

  Credits: 3. Offered intermittently. A field and laboratory based exploration of the microbial diversity of the thermal features of our first national park. Topics to be discussed include how these communities are shaped by the physical and chemical conditions of the environment and how microorganisms can thrive at life's extremes. Includes a field trip to Yellowstone National Park. Course Attributes: Natural Science Course (N)

- BIOM 227 - Vectors and Parasites

  Credits: 3. Offered spring. Prereq., college level general biology class is recommended but not required. An introduction to the major groups of parasites and arthropod-borne pathogens infecting humans worldwide. The class will stress the biology, transmission dynamics, prevention and control of these organisms.

- BIOM 250N - Microbiology for Hlth Sciences

  Credits: 3. Offered spring. Infectious diseases, including concepts of virulence, resistance, prevention and control of microbial diseases in the individual and in the community. If laboratory experience is desired, the student may enroll concurrently in BIOM 251. Credit not allowed toward a major in microbiology. Course Attributes: Natural Science Course (N)

- BIOM 251 - Microbiology Hlth Sciences Lab

  Credits: 1. Offered spring. Prereq. or coreq., BIOM 250N. Observation of live microorganisms, their characteristics and activities. Experience with microbiological techniques. Credit not allowed toward a major in microbiology.

- BIOM 291 - Special Topics

  Credits: 1 TO 6. (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BIOM 360 - General Microbiology

  Credits: 3. Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.

- BIOM 361 - General Microbiology Lab

  Credits: 2. Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.

- BIOM 390 - Undergraduate Research

  Credits: 1 TO 6. (R-10) Offered every term. Prereq., consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit.

- BIOM 400 - Medical Microbiology

  Credits: 3. Offered autumn. Microbial structure and functions, pathogenic microorganisms, virology, immunology. Credit not allowed toward a major in microbiology.

- BIOM 402 - Medical Bacteriology& Mycology

  Credits: 3. Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.

- BIOM 403 - Medicl Bacteriolgy & Myclgy Lb

  Credits: 2. Offered spring. Prereq. or coreq., BIOM 402. Laboratory study of pathogenic bacteria and fungi.

- BIOM 407 - Clinical Diagnosis

  Credits: 2. Offered spring. Prereq., BIOM 360-361 or BIOH 365 or BIOM 402/403 (may concur). Principles of blood chemistry, urinalysis, blood banking, serology and other clinical parameters of disease and health.

- BIOM 408 - Clinical Diagnosis Lab

  Credits: 1. Offered spring. Prereq., or coreq., BIOM 407, and BIOM 360-361 or BIOH 365 or BIOM 402/403 (may concur). Clinical diagnostic methods.

- BIOM 410 - Microbial Genetics

  Credits: 3. Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.

- BIOM 411 - Exprmntl Microbial Genetcs Lab

  Credits: 1. Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.

- BIOM 415 - Microbial Dvrsty Eclgy & Evltn

  Credits: 3. Offered spring. Prereq., BIOB 260, 272, BIOM 360-361 or consent of instr. A broad overview of the physiological, phylogenetic and genomic diversity and ecology of microorganisms within a framework of general ecological principles. Focuses on microbial interactions with their environment at the level of the individual, population and community, including intimate associations with plants and animals. Surveys current methods for studying microbial ecology and diversity in the environment.

- BIOM 427 - General Parasitology

  Credits: 2. Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.

- BIOM 428 - General Parasitology Lab

  Credits: 2. Offered autumn. Coreq., BIOM 427. Taxonomy, morphology and identification of parasitic protozoa, helminths and arthropods.

- BIOM 435 - Virology

  Credits: 3. Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535. Course Attributes: Co-Convened Course

- BIOM 450 - Microbial Physiology

  Credits: 3. Offered autumn. Prereq., BIOM 360-361. Microbial structure and function, physiological diversity, microbial metabolism, role of microbial activity in the environment.

- BIOM 451 - Microbial Physiology Lab

  Credits: 1. Offered autumn. Coreq., BIOM 450. Experimental approaches to analysis of microbial structure, composition and metabolism.

- BIOM 490 - Adv Undergrad Research

  Credits: 1 TO 10. (R-10) Offered every term. Prereq., BIOM 360, junior or senior standing and consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit. Course Attributes: Research & Creative Schlrshp

- BIOM 491 - Special Topics

  Credits: 1 TO 10. (R-10) Offered intermittently. Experimental offerings of new courses, experimental offerings of visiting professors, or one-time offerings of current topics.

- BIOM 494 - Seminar

  Credits: 1. (R-3) Offered intermittently. Prereq., senior standing in natural sciences. Recent topics in microbiology and related subjects.

- BIOM 498 - Internship

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of instr. Extended classroom experience which provides practical application of classroom learning during placements off campus. Course Attributes: Internships/Practicums

- BIOM 499 - Undergraduate Thesis

  Credits: 3 TO 6. (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.

- BIOM 502 - Advanced Immunology

  Credits: 3. Offered autumn even-numbered years. Advanced topics and immunological techniques used in modern immunology. Level: Graduate

- BIOM 505 - Advanced Topics in Metagenomics

  Credits: 1. (R-8) The course comprises a study group of four faculty 4-6 graduate students and select advanced undergraduates that meets weekly to consider and discuss advances in the areas of metagenomics and bioinformatics research based on recent publications in the primary literature or on their own research findings. There are no specific course prerequisites, but the course is only appropriate for microbiology and computer science graduate and advanced undergraduate students and requires permission of the instructor for enrollment. Level: Graduate

- BIOM 509 - Advanced Virology

  Credits: 3. Offered spring add-numbered years. Prereq., BIOM 435 (MICB 420). Students are presented with research papers that have been pivotal to the understanding of important molecular or genetic concepts in virology. Level: Graduate

- BIOM 535 - Advanced Virology

  Credits: 3. Coreq., BIOB 596. A “principles-based” discussion of virology, focusing on the molecular processes and events that must be completed by all viruses for successful replication within an individual host, and spread through host populations. The molecular basis of alternative replication strategies, the interactions of viruses with hosts organisms, and how these interactions lead to disease will be presented with examples drawn from a representative set of more well-understood animal viruses. BIOM 535 emphasizes independent, creative, critical thought. Co-convenes with BIOM 435. Level: Graduate Course Attributes: Co-Convened Course

- BIOM 540 - Microbial Pathogenesis

  Credits: 3. Offered fall. Prereq., graduate standing. Current concepts in pathogenesis at the molecular and cellular levels. Focus is on microbial (virla, bacterial) and genetic factors leading to disease and the host's involvement in the process. Level: Graduate

- BIOM 545 - Adv Topics in Microb Ecol

  Credits: 1. (R-4) Offered every term. Prereq., graduate standing or consent of instr. Discussion of selected themes of the ecology of microorganisms with a focus on the recent primary literature. Level: Graduate

- BIOM 546 - Experimental Microb Ecol

  Credits: 1. Offered every term. Prereq., graduate standing or consent of instr. Focus on experimental design, methods, and presentation of experimental results in the area of microbial ecology. Level: Graduate

- BIOM 570 - Intro to Research

  Credits: 1. (R-2) Offered autumn and spring. Prereq., graduate standing. Required course for biochemistry and microbiology graduate students. Instruction in basic research techniques, research equipment and reading in the relevant scientific literature. Students conduct research projects under faculty mentors of their choosing. Level: Graduate

- BIOM 594 - Seminar

Credits: 1. (R-4) Offered autumn and spring. Prereq., graduate standing or consent of instr. Same as BCH 594. Presentation of current research in biochemistry and molecular biology by senior graduate students, faculty, and invited outside speakers. Level: Graduate

- BIOM 595 - Special Topics
  Credits: 1 TO 3. (R-6) Offered intermittently. Prereq., graduate standing. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate
- BIOM 596 - Independent Study
  Credits: 1 TO 6. (R-6) Prereq., consent of instr. Credit for independent research project unrelated to thesis or dissertation. Level: Graduate
- BIOM 597 - Research
  Credits: 1 TO 18. (R-18) Offered intermittently. Prereq., graduate standing, one semester residence. Level: Graduate
- BIOM 599 - Thesis
  Credits: 1 TO 10. (R-10) Offered intermittently. Prereq., master's student in microbiology. Laboratory research for and preparation of a master's thesis. Level: Graduate
- BIOM 699 - Dissertation
  Credits: 1 TO 20. (R-20) Offered intermittently. Prereq., doctoral student in microbiology. Laboratory research for and preparation of a doctoral dissertation. Level: Graduate

Biology - Organismal

Back to Top

- BIOO 101N - Survey MT Wldlife & Habitats
  Credits: 3. Offered online autumn. Prereq., one course in biology. Interpreting biological patterns associated with selected Montana wildlife species, including mammals, birds, reptiles and amphibians. Course Attributes: Natural Science Course (N)
- BIOO 105N - Introduction to Botany
  Credits: 3. Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology. Course Attributes: Natural Science Lab Course (N) Natural Science Course (N)
- BIOO 320 - General Botany
  Credits: 5. Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.
- BIOO 335 - Rocky Mountain Flora
  Credits: 3. Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.
- BIOO 340 - Biology and Mgmnt of Fishes
  Credits: 4. Offered autumn. Prereq., BIOB 272 and either STAT 216 or WILD 240. Diversity, adaptations and ecology of fishes. Analysis and management of fish populations and communities.
- BIOO 433 - Plant Physiology
  Credits: 3. Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.
- BIOO 434 - Plant Physiology Lab
  Credits: 1. Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.
- BIOO 462 - Entomology
  Credits: 4. Offered alternate springs. Prereq. or Coreq., BIOB 272. The classification, morphology, anatomy, development, life-history, behavior and ecology of insects. Labs include identification of major insect groups, internal and external anatomy and student collections.

- BIOO 470 - Ornithology
  Credits: 4. Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.
- BIOO 475 - Mammalogy
  Credits: 4. Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.
- BIOO 490 - Adv Undergrad Research
  Credits: 1 TO 10. (R-10) Offered every term. Prereq., junior or senior standing and consent of instr. Independent research under the direction of a faculty member.

Biology - Systems Ecology

Back to Top

- BIOS 532 - Ecosystem Ecology
  Credits: 3. Offered autumn every other year. Prereq. CHMY 141N or the equivalent. Coreq. CHMY 143N and BCH 111. This course includes the fundamentals of an ecosystem approach to ecological research by emphasizing relationships among physical, chemical, and biotic elements of interactive systems. It will provide a fundamental basis for more advanced Systems Ecology courses (e.g., Limnology, Integrated Systems Ecology, Landscape Genetics, etc.). Level: Graduate
- BIOS 534 - Integrated Systems Ecology
  Credits: 3. Offered spring semester alternate years. Principles, theories and empirical studies that describe the complex attributes and processes of coupled natural and human systems. Landscape, climate, economic and social change dynamics and processes emphasized. Flagship course of the UM-DBS Systems Ecology Program. Students strongly advised but not required to take BIOS 532 Fundamentals of Ecosystem Ecology prior to this course. Level: Graduate
- BIOS 594 - Seminar
  Credits: 1 TO 6. Offered intermittently. Prereq. graduate standing. Presentations by student, faculty, and associates on issues and topics in their field. Level: Graduate
- BIOS 599 - Thesis
  Credits: 1 TO 10. (R-10) Field and laboratory research on, and writing of, a student's masters thesis. Level: Graduate
- BIOS 699 - Thesis
  Credits: 1 TO 10. (R-10) Field and laboratory research on, and writing of, a student's masters thesis. Level: Graduate

Microbiology

Back to Top

- MICB 699 - Dissertation
  Credits: 1 TO 20. (R-20) Offered intermittently. Prereq., doctoral student in microbiology. Laboratory research for and preparation of a doctoral dissertation. Level: Graduate

Cellular and Molecular Biology

Bachelor of Science - Biology; Cellular & Molecular Biology Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 81

Required Cumulative GPA: 2.0

Note: Cellular and molecular biology is the study of cellular, molecular, and physiological aspects of biology. This option is a graduate prep program, and is for students interested in academia or research jobs in private or government laboratories. It is also an excellent option for pre-medical sciences students.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/BIOB 161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Core Courses Required by Cellular & Molecular Biology option

Rule: All of the following courses are required.

	Course	Credits
	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 301 - Developmental Biology Offered autumn. Prereq., BIOB 260; BIOB 272 recommended. An analysis of the origin and development of form and patterns in organisms, stressing the processes of growth and differentiation in plants and animals. Graded traditional letter grade only.	3 Credits
	BIOB 375 - General Genetics Offered spring. Prereq., BIOB 260 and 272. This course will focus on the molecular genetics of eukaryotes, with special emphasis on transmission genetics and gene structure and regulation.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
Minimum Required Grade: C-		20 Total Credits Required

Additional UD Major Courses Required for the Cellular & Molecular Biology Option

Rule: Complete one or two courses in each subcategory (as indicated)

Minimum Required Grade: C-

Disease Elective

Rule: Complete at least one of the following courses

	Course	Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOM 435 - Virology Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Additional UD Depth Courses (Lecture)

Rule: Complete at least one of the following lecture courses

Note: If BIOO 433, then the lab BIOO 434 must also be taken.

	Course	Credits
	BIOB 440 - Biological Electron Microscopy Offered spring. Prereq., senior standing or consent of instr. Theory of electron microscopy, recent developments in transmission and scanning electron microscopy. Limited experience with the instruments.	2 Credits
	BIOB 468 - Endocrinology Offered alternate years. Prereq., BIOB 260 and 272. Integration of fundamental concepts of endocrinology (such as hormone release, hormone transport and receptor activation) into complex systems (such as reproduction).	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOB 486 - Genomics Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.	3 Credits
	BIOL 435 - Comparative Animal Physiology Offered spring. Prereq., BIOB 260 or equivalent. Animal physiology with emphasis on diversity of functional processes, with strong links to broader ecological and evolutionary contexts.	3 Credits

	BIOM 410 - Microbial Genetics Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.	3 Credits
	BIOM 450 - Microbial Physiology Offered autumn. Prereq., BIOM 360-361. Microbial structure and function, physiological diversity, microbial metabolism, role of microbial activity in the environment.	3 Credits
	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits
Minimum Required Grade: C-		2-4 Total Credits Required

Additional UD Depth Courses (Laboratory)

Rule: Complete at least two of the following laboratory courses

	Course	**Credits**
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 451 - Microbial Physiology Lab Offered autumn. Coreq., BIOM 450. Experimental approaches to analysis of microbial structure, composition and metabolism.	1 Credits
	BIOM 490 - Adv Undergrad Research (R-10) Offered every term. Prereq., BIOM 360, junior or senior standing and consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit.	1 To 10 Credits
Minimum Required Grade: C-		2-5 Total Credits Required

Required Courses Outside of the Major

Minimum Required Grade: C-

Mathematics - Calculus

Rule: Required

Note: M 171 Calculus I may be substituted for M 162.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Chemistry

Rule: All of the following courses are required.

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
Minimum Required Grade: C-		20 Total Credits Required

Additional Depth in Chemistry

Rule: Complete at least one of the following chemistry courses

	Course	Credits
	CHMY 311 - Analytical Chem-Quant Analysis Offered autumn. Prereq., one year of college chemistry, including laboratory. Classroom and laboratory work in gravimetric, volumetric, colorimetric and electrochemical methods of analysis; theory of errors; ionic equilibria in aqueous solutions.	4 Credits
	CHMY 360 - Applied Physical Chemistry Offered spring. Prereq., CHMY 123 OR 143 AND M 162. Basic thermodynamics and chemical kinetics with applications in the biological and environmental sciences. Credit not allowed for both 360 and 373.	3 Credits
	CHMY 373 - Phys Chem-Kntcs & Thrmdynmcs Offered autumn. Prereq., CHMY 143N, M 273, PHSX 207N or 217N. Systematic treatment of the laws and theories relating to chemical phenomena. Credit not allowed for both CHMY 360 and 373.	4 Credits
Minimum Required Grade: C-		3 or 4 Total Credits Required

Physics

Rule: All of the following courses are required.

Note: These are algebra- and trigonometry-based physics courses. The calculus-based physics sequence, PHSX 215N/216N & PHSX 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N & 207N/208N.

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits

	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course)

Note: To meet the Upper Division Writing Expectation for the Major, Biology students take 2 or 3 partial writing courses (either three 1/3 writing courses or one 1/3 writing course and one 2/3 writing course) or one complete writing course. The Cellular & Molecular Biology Option requires two 1/3 writing courses: BCH 482 and BIOB 425. The UD Writing Expectation for the Major is completed with one additional course, chosen from any of the following.

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits

	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	**Credits**

	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	**Credits**

	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits
Minimum Required Grade: C-		

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Ecology and Organismal Biology

Bachelor of Science - Biology; Ecology and Organismal Biology Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 69

Required Cumulative GPA: 2.0

Note: The Ecology and Organismal Biology option is for students interested in the biology of organisms (plants or animals) or the biology of populations and communities. Course offerings include those from organismal biology, ecology, evolutionary biology, and conservation biology. This option is a graduate prep program, and it is designed for students interested in academia or employment with government agencies (e.g. National Biological Survey, U.S. FWS, etc.), or environmental consulting agencies. This option is also an excellent choice for pre-veterinary students.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Core Courses Required by Ecology & Organismal Biology Option

Rule: All of the following courses are required.

Note: BIOE 342 Field Ecology at the Flathead Lake Biological Station may be substituted for BIOE 370/371

	Course	Credits

	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
Minimum Required Grade: C-		5 Total Credits Required

Additional Upper Division Major Courses Required for the Ecology & Organismal Biology Option

Rule: Complete a minimum of 21 credits of UD BIOB, BIOE, BIOH, BIOL, BIOM, BIOO, or BCH, with at least one course from each subcategory

Note: Other recommended courses include BCH 380 or BCH 480-482.

Minimum Required Grade: C-

21 Total Credits Required

Organismal Course Requirement

Rule: Complete at least one organismal course (lab must also be taken, if available) from the following list

Note: If BIOO 433 Plant Physiology, then BIOO 434 Plant Physiology Lab must also be taken.

	Course	**Credits**
	BIOB 301 - Developmental Biology Offered autumn. Prereq., BIOB 260; BIOB 272 recommended. An analysis of the origin and development of form and patterns in organisms, stressing the processes of growth and differentiation in plants and animals. Graded traditional letter grade only.	3 Credits
	BIOB 375 - General Genetics Offered spring. Prereq., BIOB 260 and 272. This course will focus on the molecular genetics of eukaryotes, with special emphasis on transmission genetics and gene structure and regulation.	3 Credits
	BIOB 468 - Endocrinology Offered alternate years. Prereq., BIOB 260 and 272. Integration of fundamental concepts of endocrinology (such as hormone release, hormone transport and receptor activation) into complex systems (such as reproduction).	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits

	BIOL 435 - Comparative Animal Physiology Offered spring. Prereq., BIOB 260 or equivalent. Animal physiology with emphasis on diversity of functional processes, with strong links to broader ecological and evolutionary contexts.	3 Credits
	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits
Minimum Required Grade: C-		

-Ology Course Requirement

Rule: Complete at least one course with a focus on a group of organisms (lab must also be taken, if available) from the following list

Note: If BIOM 360 General Microbiology, then BIOM 361 General Microbiology Lab must also be taken.
If BIOM 427 General Parasitology, then BIOM 428 General Parasitology Lab must also be taken.

	Course	**Credits**
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	BIOO 340 - Biology and Mgmnt of Fishes Offered autumn. Prereq., BIOB 272 and either STAT 216 or WILD 240. Diversity, adaptations and ecology of fishes. Analysis and management of fish populations and communities.	4 Credits
	BIOO 462 - Entomology Offered alternate springs. Prereq. or Coreq., BIOB 272. The classification, morphology, anatomy, development, life-history, behavior and ecology of insects. Labs include identification of major insect groups, internal and external anatomy and student collections.	4 Credits

	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits
Minimum Required Grade: C-		

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Rule: Complete at least one course with a focus on a group of organisms (lab must also be taken, if available) from the following list

Note: If BIOM 360 General Microbiology, then BIOM 361 General Microbiology Lab must also be taken.
If BIOM 427 General Parasitology, then BIOM 428 General Parasitology Lab must also be taken.

	Course	**Credits**
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	BIOO 340 - Biology and Mgmnt of Fishes Offered autumn. Prereq., BIOB 272 and either STAT 216 or WILD 240. Diversity, adaptations and ecology of fishes. Analysis and management of fish populations and communities.	4 Credits
	BIOO 462 - Entomology Offered alternate springs. Prereq. or Coreq., BIOB 272. The classification, morphology, anatomy, development, life-history, behavior and ecology of insects. Labs include identification of major insect groups, internal and external anatomy and student collections.	4 Credits

	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

Specialized Ecology Course Requirement

Rule: Complete at least one specialized ecology course from the following list

Note: A specialized ecology course taken at the Flathead Lake Biological Station (BIOE 416, 439, 440, 451, 453, or 458) may be substituted for this requirement.

	Course	Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOE 448 - Terrestrial Plant Ecology Offered alternate autumn. Prereq. BIOB 272N. The interrelationships between plants and plant communities and their natural environment.	4 Credits
	BIOE 449 - Plant Biogeography Offered intermittently. Prereq., consent of instr. Description of the distribution of plants and animals at global, continental and regional scales. Analysis of ecological and historical factors influencing distribution and association.	3 Credits
	BIOM 415 - Microbial Dvrsty Eclgy & Evltn Offered spring. Prereq., BIOB 260, 272, BIOM 360-361 or consent of instr. A broad overview of the physiological, phylogenetic and genomic diversity and ecology of microorganisms within a framework of general ecological principles. Focuses on microbial interactions with their environment at the level of the individual, population and community, including intimate associations with plants and animals. Surveys current methods for studying microbial ecology and diversity in the environment.	3 Credits
	WILD 346 - Wildlife Physiological Ecology Offered autumn. Prereq., BIOB 272. Only open to Wildlife Biology Majors. How physiological and biochemical processes in animals influence behavior and ecology. Application of physiological approaches to wildlife conservation such as assessment of animal health, nutritional condition, and physiological performance.	3 Credits
	WILD 470 - Conserv of Wildlife Populatns Offered autumn and spring. Prereq., BIOE 370, M 162 or M 171, and senior standing in Biology, Forestry, Resource Conservation, Recreation Management or Wildlife Biology. Application of population ecology principles and theory to the conservation and management of wildlife populations.	3 Credits

Minimum Required Grade: C-	

Evolution Course Requirement

Rule: Complete at least one evolutionary biology course from the following list

	Course	Credits
	BIOB 480 - Conservation Genetics Offered intermittently. Prereq., BIOB 272. Genetic basis for solving biological problems in conservation including the genetics of small populations, the application of molecular genetic techniques to conservation biology and case studies of the application of genetics to conservation problems.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOB 486 - Genomics Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.	3 Credits
	BIOE 406 - Behavior & Evolution Offered autumn. Prereq., BIOB 272. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies.	3 Credits
	BIOE 482 - Evolution & Development Offered intermittently. Prereq., BIOB 170N and 272. Lecture, reading and discussion of questions at the intersection of developmental and evolutionary biology. Questions include but are not restricted to: how novel traits arise; how diversity in animal form is generated; and how phenotypic plasticity (environment-sensitive expression of traits) is produced.	3 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
Minimum Required Grade: C-		

Required Courses Outside of the Major

Minimum Required Grade: C-

Mathematics - Calculus

Rule: Complete one of the following calculus courses

Note: Choose M 171, if you plan to take additional calculus courses, or if you plan a double major or minor in a field that requires more calculus (e.g. math, physics, biochemistry, computer science).

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Mathematics - Statistics

Rule: Complete either one semester of statistics (STAT 216) or a full year of statistics (STAT 451/457 and 452/458)

Note: Choose the full year of statistics for graduate preparation in ecology.

	Course	Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	STAT 451 - Statistical Methods I Offered autumn. Prereq., one year of college mathematics including M 115 or equiv. course in probability or consent of instr. May not be counted toward a major in mathematics. Intended primarily for non-mathematics majors who will be analyzing data. Graphical and numerical summaries of data, elementary sampling, designing experiments, probability as a model for random phenomena and as a tool for making statistical inferences, random variables, basic ideas of inference and hypothesis testing. Level: Undergraduate-Graduate	3 Credits
	STAT 452 - Statistical Methods II Offered spring. Prereq., STAT 451. Continuation of STAT 451. May not be counted toward a major in mathematics. Multiple regression, experimental design, analysis of variance, other statistical models. Level: Undergraduate-Graduate	3 Credits

	STAT 457 - Computer Data Analysis I Offered autumn. Coreq., STAT 451 or consent of instr. An introduction to software for doing statistical analyses. Intended primarily for students in STAT 451. Level: Undergraduate-Graduate	1 Credits
	STAT 458 - Computer Data Analysis II Offered spring. Coreq., STAT 452 or consent of instr. Continuation of STAT 457. Intended primarily for students in STAT 452. Level: Undergraduate-Graduate	1 Credits
Minimum Required Grade: C-		4 or 8 Total Credits Required

Chemistry

Rule: Complete either one year of chemistry (CHMY 121N, 123N/124N) or two years of chemistry (CHMY 141N, 143N, 221/222, 223/224)

Note: Choose the two year sequence of chemistry for graduate preparation in organismal biology, or if you are pre-veterinary.

__	**Course**	**Credits**
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits

	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
Minimum Required Grade: C-		8 or 20 Total Credits Required

Physics

Rule: All of the following courses are required.

Note: These are algebra- and trigonometry-based physics courses. The calculus-based physics sequence, PHSX 215N/216N & 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N & 207N/208N.

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course)

Note: To meet the Upper Division Writing Expectation for the Major, Biology students take 2 or 3 partial writing courses (either three 1/3 writing courses or one 1/3 writing course and one 2/3 writing course) or one complete writing course. The Ecology & Organismal Biology Option requires one 2/3 writing course (BIOE 371). The UD Writing Expectation for the Major is completed with one more course, chosen from any of the following.

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits

	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	**Credits**
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits

	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	Credits
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits

	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Field Ecology

Bachelor of Science - Biology; Field Ecology Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 69

Required Cumulative GPA: 2.0

Note: The Field Ecology option is for students interested in field-based ecology. Students with this option spend one or two summers taking field courses at the Flathead Lake Biological Station. This option is a graduate prep program, and is for students interested in academia or employment at a governmental, private or non-profit agency.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	**Credits**
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits

	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Core Courses Required for the Field Ecology Option

Rule: Complete the on-campus general ecology lecture and lab (BIOE 370/371) or the field ecology course at the Flathead Lake Biological Station (BIOL 342)

__	**Course**	**Credits**
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
Minimum Required Grade: C-		5 Total Credits Required

Additional Upper Division Major Courses Required for the Field Ecology Option

Rule: Complete a minimum of 8 credits of Upper Division Biology or Microbiology, with at least one course from each subcategory

Minimum Required Grade: C-

8 Total Credits Required

Evolution Course Requirement

Rule: Complete at least one evolutionary biology course from the following list

	Course	Credits
	BIOB 480 - Conservation Genetics Offered intermittently. Prereq., BIOB 272. Genetic basis for solving biological problems in conservation including the genetics of small populations, the application of molecular genetic techniques to conservation biology and case studies of the application of genetics to conservation problems.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOB 486 - Genomics Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.	3 Credits
	BIOE 406 - Behavior & Evolution Offered autumn. Prereq., BIOB 272. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies.	3 Credits
	BIOE 482 - Evolution & Development Offered intermittently. Prereq., BIOB 170N and 272. Lecture, reading and discussion of questions at the intersection of developmental and evolutionary biology. Questions include but are not restricted to: how novel traits arise; how diversity in animal form is generated; and how phenotypic plasticity (environment-sensitive expression of traits) is produced.	3 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
Minimum Required Grade: C-		

-Ology Course Requirement

Rule: Complete at least one course with a focus on a group of organisms (lab must also be taken, if available) from the following list

Note: If BIOM 360 General Microbiology, then BIOM 361 General Microbiology Lab must also be taken.
If BIOM 427 General Parasitology, then BIOM 428 General Parasitology Lab must also be taken.

	Course	Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	BIOO 340 - Biology and Mgmnt of Fishes Offered autumn. Prereq., BIOB 272 and either STAT 216 or WILD 240. Diversity, adaptations and ecology of fishes. Analysis and management of fish populations and communities.	4 Credits
	BIOO 462 - Entomology Offered alternate springs. Prereq. or Coreq., BIOB 272. The classification, morphology, anatomy, development, life-history, behavior and ecology of insects. Labs include identification of major insect groups, internal and external anatomy and student collections.	4 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

Ecology Requirement at the Flathead Lake Biological Station

Rule: Complete either the Aquatic Emphasis or the Terrestrial Emphasis
Minimum Required Grade: C-

Aquatic Emphasis

Rule: All of the following courses are required for the Aquatic Emphasis

	Course	Credits
	BIOE 439 - Stream Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N. The biota and biogeochemical processes of running waters with unifying principles and contemporary research approaches.	3 Credits
	BIOE 440 - Conservation Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Concepts and approaches for sustaining biodiversity and other natural goods and services provided by terrestrial and aquatic systems.	3 Credits
	BIOE 451 - Landscape Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Biophysical processes that determine landscape and ecosystem structure and function using remote sensing tools, geographic information systems and dynamic models to demonstrate landscape change.	3 Credits
	BIOE 453 - Ecology of Small & Large Lakes Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N and CHMY 123N. The physical, chemical and biological characteristics of lake ecosystems with an emphasis on nutrient cycling, food web interactions and water quality.	3 Credits
	BIOL 492 - Seminars in Ecol & Res Man Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371 or taken concurrently with BIOE 342. Seminar course that meets weekly for 2 hours in the evening. Includes seminar speaker and discussion.	1 Credits
Minimum Required Grade: C-		13 Total Credits Required

Terrestrial Emphasis

Rule: All of the following courses are required for the Terrestrial Emphasis

	Course	Credits
	BIOE 416 - Alpine Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Distribution, abundance and life cycles of plants and animals and their unique ecophysiological adaptations to life in the rigorous environments of the high mountains above the timberline, with emphasis on the Crown of the Continent area.	3 Credits

	BIOE 440 - Conservation Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Concepts and approaches for sustaining biodiversity and other natural goods and services provided by terrestrial and aquatic systems.	3 Credits
	BIOE 451 - Landscape Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Biophysical processes that determine landscape and ecosystem structure and function using remote sensing tools, geographic information systems and dynamic models to demonstrate landscape change.	3 Credits
	BIOE 458 - Forest and Grassland Ecol Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Patterns and processes of the forests and grasslands of the northern Rocky Mountains in the context of principles of population community and ecosystem ecology.	3 Credits
	BIOL 492 - Seminars in Ecol & Res Man Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371 or taken concurrently with BIOE 342. Seminar course that meets weekly for 2 hours in the evening. Includes seminar speaker and discussion.	1 Credits
Minimum Required Grade: C-		13 Total Credits Required

Required Courses Outside of the Major

Minimum Required Grade: C-

Mathematics - Calculus

Rule: Required

Note: M 171 (Calculus I) may be substituted for M 162.

	Course	**Credits**
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Mathematics - Statistics

Rule: Complete either one semester of statistics (STAT 216) or a full year of statistics (STAT 451/457 and 452/458)

	Course	Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	STAT 451 - Statistical Methods I Offered autumn. Prereq., one year of college mathematics including M 115 or equiv. course in probability or consent of instr. May not be counted toward a major in mathematics. Intended primarily for non-mathematics majors who will be analyzing data. Graphical and numerical summaries of data, elementary sampling, designing experiments, probability as a model for random phenomena and as a tool for making statistical inferences, random variables, basic ideas of inference and hypothesis testing. Level: Undergraduate-Graduate	3 Credits
	STAT 452 - Statistical Methods II Offered spring. Prereq., STAT 451. Continuation of STAT 451. May not be counted toward a major in mathematics. Multiple regression, experimental design, analysis of variance, other statistical models. Level: Undergraduate-Graduate	3 Credits
	STAT 457 - Computer Data Analysis I Offered autumn. Coreq., STAT 451 or consent of instr. An introduction to software for doing statistical analyses. Intended primarily for students in STAT 451. Level: Undergraduate-Graduate	1 Credits
	STAT 458 - Computer Data Analysis II Offered spring. Coreq., STAT 452 or consent of instr. Continuation of STAT 457. Intended primarily for students in STAT 452. Level: Undergraduate-Graduate	1 Credits
Minimum Required Grade: C-		4 or 8 Total Credits Required

Chemistry

Rule: Complete either one year of chemistry (CHMY 121N, 123N/124N) or two years of chemistry (CHMY 141N, 143N, 221/222, 223/224)

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits

	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
Minimum Required Grade: C-		8 or 20 Total Credits Required

Physics

Rule: All of the following courses are required

Note: These are algebra- and trigonometry-based physics courses. The calculus-based physics sequence, PHSX 215N/216N & 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N & 207N/208N.

	Course	**Credits**
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits

	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Upper Division Writing Expectations for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course)

Note: To meet the Upper Division Writing Expectation for the Major, Biology students take 2 or 3 partial writing courses (either three 1/3 writing courses or one 1/3 writing course and one 2/3 writing course) or one complete writing course. The Field Ecology Option requires BIOE 371 or BIOE 342 (both 2/3 writing courses). The UD writing requirement is completed with one additional course, chosen from any of the following.

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	**Credits**
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits

	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits

	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	Credits
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits

	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	Credits
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Human Biological Sciences

Bachelor of Science - Biology; Human Biological Sciences Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 74

Required Cumulative GPA: 2.0

Note: The Human Biological Sciences option is a pre-professional program for students planning careers in a health-related field. The following is a partial list of possible professions: physical therapy, medicine, dentistry, physician's assistant, alternative medicine, nutrition, and public health.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Core Courses Required by Human Biological Sciences Option

Rule: All of the following courses are required.

	Course	Credits
	BIOB 301 - Developmental Biology Offered autumn. Prereq., BIOB 260; BIOB 272 recommended. An analysis of the origin and development of form and patterns in organisms, stressing the processes of growth and differentiation in plants and animals. Graded traditional letter grade only.	3 Credits
	BIOB 375 - General Genetics Offered spring. Prereq., BIOB 260 and 272. This course will focus on the molecular genetics of eukaryotes, with special emphasis on transmission genetics and gene structure and regulation.	3 Credits
	BIOH 365 - Human AP I for Health Profsns Offered autumn. Prereq., CHMY 121N or CHMY 141N; BIOB 160N or BIOH 112 or 113. Introduction to basic cellular structure and function. The fundamental facts and concepts of the anatomy and physiology of cells and tissues, the integumentary, musculoskeletal, nervous and special senses with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
	BIOH 370 - Human AP II for Health Profsns Offered spring. Prereq., BIOH 365. The fundamental facts and concepts of the anatomy and physiology of the endocrine, circulatory, respiratory, digestive, urinary and reproductive systems with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
Minimum Required Grade: C-		14 Total Credits Required

Additional Upper Division Major Courses Required for the Human Biological Sciences Option

Minimum Required Grade: C-

Biochemistry Requirement

Rule: Complete either one semester of biochemistry (BCH 380) or a full year of biochemistry (BCH 480-482)

Note: If one year of chemistry is completed, then BCH 380 must be taken. Either BCH 380 or BCH 480-482 may be taken if two years of chemistry are completed.

	Course	Credits
	BCH 380 - Biochemistry Offered autumn and spring. Prereq., CHMY 223 or BIOB 260. Fundamental biochemistry; chemistry and metabolism of biomolecules, energy relationships in metabolism; storage, transmission, and expression of genetic information. Credit not allowed for both BCH 380 and 480-482.	4 Credits

	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
Minimum Required Grade: C-		4 or 6 Total Credits Required

Microbiology Requirement

Rule: Complete either BIOM 400 or both BIOM 360 and 361

	Course	Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
	BIOM 400 - Medical Microbiology Offered autumn. Microbial structure and functions, pathogenic microorganisms, virology, immunology. Credit not allowed toward a major in microbiology.	3 Credits
Minimum Required Grade: C-		3 or 5 Total Credits Required

Additional Depth in Human Biological Sciences

Rule: Complete at least two courses from the following list

Note: If BIOM 427 General Parasitology taken, then BIOM 428 General Parasitology Lab must also be taken.

	Course	Credits

	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 468 - Endocrinology Offered alternate years. Prereq., BIOB 260 and 272. Integration of fundamental concepts of endocrinology (such as hormone release, hormone transport and receptor activation) into complex systems (such as reproduction).	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOB 486 - Genomics Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.	3 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits

	BIOE 406 - Behavior & Evolution Offered autumn. Prereq., BIOB 272. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies.	3 Credits
	BIOE 482 - Evolution & Development Offered intermittently. Prereq., BIOB 170N and 272. Lecture, reading and discussion of questions at the intersection of developmental and evolutionary biology. Questions include but are not restricted to: how novel traits arise; how diversity in animal form is generated; and how phenotypic plasticity (environment-sensitive expression of traits) is produced.	3 Credits
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits
	BIOL 435 - Comparative Animal Physiology Offered spring. Prereq., BIOB 260 or equivalent. Animal physiology with emphasis on diversity of functional processes, with strong links to broader ecological and evolutionary contexts.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOM 410 - Microbial Genetics Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.	3 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOM 435 - Virology Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535.	3 Credits
	BIOM 450 - Microbial Physiology Offered autumn. Prereq., BIOM 360-361. Microbial structure and function, physiological diversity, microbial metabolism, role of microbial activity in the environment.	3 Credits
Minimum Required Grade: C-		6 - 9 Total Credits Required

Required Courses Outside of the Major

Minimum Required Grade: C-

Mathematics and Psychology

Rule: All of the following courses are required

Note: M 171 Calculus I may be substituted for M 162.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		12 Total Credits Required

Chemistry

Rule: Complete either one year of chemistry (CHMY 121N, 123N/124N) or two years of chemistry (CHMY 141N, 143N, 221/222, 223/224)

Note: If you plan to apply to a graduate or professional school such as medical or dental, you should plan to complete the two year sequence in chemistry. If you plan to pursue nursing or a graduate program in physical therapy, the one year sequence of chemistry is sufficient. The two year chemistry option is more flexible, and keeps more options open for future careers. Check the requirements of your intended professional program to help determine which sequence is right for you.

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits

	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
Minimum Required Grade: C-		8 or 20 Total Credits Required

Physics

Rule: All of the following courses are required.

Note: These are algebra- and trigonometry-based physics courses. The calculus-based physics sequence, PHSX 215N/216N & 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N & 207N/208N.

	Course	**Credits**
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits

	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course)

Note: To meet the Upper Division Writing Expectation for the Major, Biology students take 2 or 3 partial writing courses (either three 1/3 writing courses or one 1/3 writing course and one 2/3 writing course) or one complete writing course. The Human Biological Sciences Option does not require a specific writing course.

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits

	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits

	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	Credits
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits

	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	Credits
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Natural History

Bachelor of Arts - Biology; Natural History Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 73

Required Cumulative GPA: 2.0

Note: The natural history option is designed for students who seek an interdisciplinary science program. This option is not research-oriented, and is not considered a preparatory program for traditional research-based graduate programs. It is, however, designed for students seeking careers in environmental education, science writing or illustration, natural history or wildlife film-making, or natural history centers or museums. There is enough latitude in the requirements to allow for a minor or even a double major in a related field of interest (e.g. journalism, art, media arts, etc.).

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits

Minimum Required Grade: C-	17 Total Credits Required

Upper Division Core Courses Required by Natural History Option

Rule: All of the following courses are required.

Note: BIOE 342 Field Ecology at the Flathead Lake Biological Station may be substituted for BIOE 370/371

	Course	Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOE 406 - Behavior & Evolution Offered autumn. Prereq., BIOB 272. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	BIOO 462 - Entomology Offered alternate springs. Prereq. or Coreq., BIOB 272. The classification, morphology, anatomy, development, life-history, behavior and ecology of insects. Labs include identification of major insect groups, internal and external anatomy and student collections.	4 Credits
Minimum Required Grade: C-		20 Total Credits Required

Additional Upper Division Major Courses Required for Natural History Option

Rule: Complete one of the following courses

	Course	Credits

	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Required Courses Outside of the Major

Minimum Required Grade: C-

Chemistry and Geology

Rule: Complete all of the following courses

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits
	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
Minimum Required Grade: C-		12 Total Credits Required

Cognate Electives

Rule: Complete 20 credits from the following disciplines (maximum of 10 credits/discipline): ANTY, ASTR, CHMY (excluding 121N, 123N, 124N), GPHY, GEO (excluding 101N, 102N), FORS, M, PHSX, STAT, or WILD

Note: Students should plan on taking M 121 or higher level M course (prerequisite for BIOB 272 and GER math requirement) and STAT 216 (prerequisite for BIOE 371).

Students interested in combining the Natural History Option with another subject area may, with the advisor's permission, substitute 20 credits in English - writing, journalism, photography, art, foreign language, business management, or other appropriate field.

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course).

Note: To meet the Upper Division Writing Expectation for the Major, Biology students take 2 or 3 partial writing courses (either three 1/3 writing courses or one 1/3 writing course and one 2/3 writing course) or one complete writing course. The Natural History Option requires one 2/3 writing course (BIOE 371) and several 1/3 writing courses (BIOO 320, BIOO 470 or BIOO 475). No additional writing courses must be taken to meet this requirement.

Minimum Required Grade: C-

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses will satisfy this requirement. The Natural History Option does not require a calculus course; the Natural History student may choose to take one year of a modern or classical language, or they may take one of these calculus courses (which will count towards a cognate elective).

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Biological Education

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 62

Required Cumulative GPA: 2.75

Note: This option provides students with coursework in biology and related science and mathematics needed to be certified by the State of Montana to teach secondary biology (in middle and high school). This option is appropriate for students interested in teaching biology in a larger, more urban school. In order to be licensed to teach secondary biology, students must be admitted to the Teacher Education Program through the Phyllis J. Washington College of Education and Human Sciences.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits

	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Core Courses Required by the Biological Education Option

Rule: All of the following courses are required.

	Course	Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
Minimum Required Grade: C-		14 Total Credits Required

Animal-Based Organismal Requirement

Rule: Complete one of the following courses

	Course	Credits

	BIOB 301 - Developmental Biology Offered autumn. Prereq., BIOB 260; BIOB 272 recommended. An analysis of the origin and development of form and patterns in organisms, stressing the processes of growth and differentiation in plants and animals. Graded traditional letter grade only.	3 Credits
	BIOL 435 - Comparative Animal Physiology Offered spring. Prereq., BIOB 260 or equivalent. Animal physiology with emphasis on diversity of functional processes, with strong links to broader ecological and evolutionary contexts.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Required Content Courses Outside of the Major

Minimum Required Grade: C-

Mathematics - Calculus

Rule: Complete one of the following calculus courses

Note: Choose M 171, if you plan to take additional calculus courses, or if you plan a double major or minor in a field that requires more calculus (e.g. math, physics, biochemistry, computer science).

	Course	**Credits**
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Mathematics - Statistics

Rule: The following course is required

	Course	**Credits**

	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Chemistry

Rule: All of the following courses are required

Note: CHMY 141N, 143N, 123N (required for the general science broadfield teaching option) will substitute for CHMY 121N, 123N/124N.

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	CHMY 485 - Laboratory Safety Offered autumn. Prereq., one year of college chemistry. Awareness of and methods of control of hazards encountered in laboratory work. Awareness of legal constraints on work with chemicals. Sources of information regarding chemical hazards.	1 Credits
Minimum Required Grade: C-		9 Total Credits Required

Physics

Rule: All of the following courses are required

Note: These are algebra- and trigonometry-based physics courses. The calculus-based physics courses, PHSX 215N/216N (which require M 171), may be substituted for PHSX 205N/206N.

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits

	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		5 Total Credits Required

Environmental Geosciences

Rule: Complete one of the following courses

	Course	Credits
	GEO 105N - Oceanography Offered spring. The ocean covers 70 % of the globe, and yet vast regions remain unexplored. Interactions between the atmosphere and the sea moderate and control our climate. Nearly 40 % of the world's population lives within 100 kilometers of the coast. The oceans are geographically, environmentally, culturally, and economically critical to society. This course introduces oceanography, including the origin of water and ocean basins; marine resources; atmospheric circulation; air-sea interaction; ocean-climate feedback; currents, tides, and coastal processes; marine ecology; and use and misuse of the oceans.	3 Credits
	GEO 108N - Climate Change Offered autumn. The geoscience perspective on the earth's climate system. Climate processes and feedbacks, climate history from early earth to the ice ages, present and future changes due to natural processes and human activities.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Education

Rule: The following course is required

Note: The course number EDU 497 covers many different teaching method courses. The section of EDU 497 entitled "Methods: 5 - 12 Science" is required for the Biological Education option.

	Course	Credits
	EDU 497 - Teaching and Assessing Reading (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and	0 To 4 Credits

	operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course)

Note: To meet the Upper Division Writing Expectation for the Major, Biology students take 2 or 3 partial writing courses (either three 1/3 writing courses or one 1/3 writing course and one 2/3 writing course) or one complete writing course. The Biological Education Option requires one 2/3 writing course (BIOE 371) and one 1/3 writing

course (BIOO 434). No additional courses are needed to meet this requirement.
Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits

	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	**Credits**
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits

	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	Credits
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Secondary Teaching Licensure

Note: For endorsement to teach biology, a student also must gain admission to the Teacher Education Program and meet all the requirements for secondary teaching licensure (see the College of Education & Human Sciences)

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

General Science Broadfield

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track.

Bachelor of Arts - Biology; Track: Teaching General Science Broadfield

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 72

Required Cumulative GPA: 2.75

Note: This option provides students with coursework in biology, chemistry, physics, earth sciences and mathematics needed to be certified by the State of Montana in broad-field science. This allows students to teach secondary science--biology, chemistry, physics, and earth science (in middle and high schools). This option is appropriate for students interested in teaching science in smaller, more rural schools. In order to be licensed to teach secondary science, students must be admitted to the Teacher Education Program through the Phyllis J. Washington College of Education and Human Sciences.

Lower Division Courses in the Content Areas - Biology, Chemistry, Earth Sciences, and Physics

Note: A minimum of 10 credits is required in each of the four content areas.

Biology Content Courses

Rule: All of the following courses are required

Note: AP Biology will substitute for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Chemistry Content Courses

Rule: All of the following courses are required.

Note: CHMY 141N & 143N should be completed before attempting CHMY 123N.

	Course	Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 485 - Laboratory Safety Offered autumn. Prereq., one year of college chemistry. Awareness of and methods of control of hazards encountered in laboratory work. Awareness of legal constraints on work with chemicals. Sources of information regarding chemical hazards.	1 Credits
Minimum Required Grade: C-		14 Total Credits Required

Earth Sciences Content Courses

Rule: All of the following courses are required

Note: ASTR 132N/135N are NOT acceptable substitutes for ASTR 131N/134N.

	Course	Credits
	ASTR 131N - Elementary Astronomy I Offered autumn. Prereq., high school algebra and geometry. An introduction to observational, historical, and planetary astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	3 Credits
	ASTR 134N - Elementary Astronomy Lab I Offered autumn. Prereq. or coreq., ASTR 131N Laboratory exercises in observational and planetary astronomy. Students will have a chance to visit UM's state-of-the-art planetarium and observe with our 0.4 meter telescope.	1 Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits

	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
Minimum Required Grade: C-		8 Total Credits Required

Earth Sciences Content Courses - Environmental Geosciences

Rule: Complete at least one of the following courses

	Course	Credits
	GEO 105N - Oceanography Offered spring. The ocean covers 70 % of the globe, and yet vast regions remain unexplored. Interactions between the atmosphere and the sea moderate and control our climate. Nearly 40 % of the world's population lives within 100 kilometers of the coast. The oceans are geographically, environmentally, culturally, and economically critical to society. This course introduces oceanography, including the origin of water and ocean basins; marine resources; atmospheric circulation; air-sea interaction; ocean-climate feedback; currents, tides, and coastal processes; marine ecology; and use and misuse of the oceans.	3 Credits
	GEO 108N - Climate Change Offered autumn. The geoscience perspective on the earth's climate system. Climate processes and feedbacks, climate history from early earth to the ice ages, present and future changes due to natural processes and human activities.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Physics Content Courses

Rule: All of the following courses are required.

Note: These are algebra- and trigonometry-based physics courses. The calculus-based physics sequence, PHSX 215N/216N & 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N & 207N/208N.

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits

	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Upper Division Content Courses

Rule: All of the following courses are required.

	Course	Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
Minimum Required Grade: C-		5 Total Credits Required

Required Content Courses Outside of the Major

Minimum Required Grade: C-

Mathematics - Calculus

Rule: Complete one of the following calculus courses

Note: Choose M 171, if you plan to take additional calculus courses, or if you plan a double major or minor in a field that requires more calculus (e.g. math, physics, biochemistry, computer science).

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Mathematics - Statistics

Rule: The following course is required

	Course	Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Education

Rule: The following course is required

Note: The course number EDU 497 covers many different teaching methods courses. The section of EDU 497 entitled "Methods: 5 - 12 Science" is required for the General Science Broadfield.

	Course	Credits

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits

Minimum Required Grade: C-	3 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course).

Note: To meet the Upper Division Writing Expectation for the Major, Biology students take 2 or 3 partial writing courses (either three 1/3 writing courses or one 1/3 writing course and one 2/3 writing course) or one complete writing course. The General Science Broadfield requires one 2/3 writing course (BIOE 371). The Upper Division Writing Expectation is completed with one additional course, chosen from any of the following. The recommended course is BIOO 434 Plant Physiology lab (taken with BIOO 433 Plant Physiology), which are required for the Teaching Biology endorsement.

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits

	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	**Credits**
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits

	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	**Credits**
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Secondary Teaching Licensure

Note: For endorsement to teach general science, a student also must gain admission to the Teacher Education Program and meet all the requirements for secondary teaching licensure (see the College of Education & Human Sciences)

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Genetics and Evolution

Bachelor of Science - Biology; Genetics and Evolution Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 70

Required Cumulative GPA: 2.0

Note: Genetics and evolution is for students interested in genetics and evolutionary biology, including molecular genetics, population genetics, ecological genetics, and genomics. This option is a graduate prep program, and is for students interested in academia or research jobs in private or government laboratories. It is also an excellent option for students interested in a professional health program such as medical school or a genetic counseling graduate program.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Core Courses Required by the Genetics & Evolution Option

Rule: All of the following courses are required.

	Course	Credits
	BIOB 375 - General Genetics Offered spring. Prereq., BIOB 260 and 272. This course will focus on the molecular genetics of eukaryotes, with special emphasis on transmission genetics and gene structure and regulation.	3 Credits

	BIOB 486 - Genomics Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.	3 Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
Minimum Required Grade: C-		11 Total Credits Required

Additional UD Major Courses Required for the Genetics & Evolution Option

Minimum Required Grade: C-

Biochemistry

Rule: Complete either one semester of biochemistry (BCH 380) or two semesters of biochemistry (BCH 480-482)

Note: If one year of chemistry is completed, then BCH 380 must be taken. Either BCH 380 or BCH 480-482 may be taken if two years of chemistry are completed.

	Course	Credits
	BCH 380 - Biochemistry Offered autumn and spring. Prereq., CHMY 223 or BIOB 260. Fundamental biochemistry; chemistry and metabolism of biomolecules, energy relationships in metabolism; storage, transmission, and expression of genetic information. Credit not allowed for both BCH 380 and 480-482.	4 Credits
	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits

Minimum Required Grade: C-	4 or 6 Total Credits Required

Genetics/Evolution Depth Courses

Rule: Complete at least three of the following genetics/evolution courses

	Course	Credits
	BIOB 480 - Conservation Genetics Offered intermittently. Prereq., BIOB 272. Genetic basis for solving biological problems in conservation including the genetics of small populations, the application of molecular genetic techniques to conservation biology and case studies of the application of genetics to conservation problems.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOB 488 - Programming for Biology Offered spring. Prereq., BIOB 486 or A- or higher in BIOB 272. An introduction to computer programming using genomic and evolutionary examples. No prior programming experience expected or required.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 406 - Behavior & Evolution Offered autumn. Prereq., BIOB 272. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies.	4 Credits
	BIOE 482 - Evolution & Development Offered intermittently. Prereq., BIOB 170N and 272. Lecture, reading and discussion of questions at the intersection of developmental and evolutionary biology. Questions include but are not restricted to: how novel traits arise; how diversity in animal form is generated; and how phenotypic plasticity (environment-sensitive expression of traits) is produced.	3 Credits

	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 410 - Microbial Genetics Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.	3 Credits
	BIOM 415 - Microbial Dvrsty Eclgy & Evltn Offered spring. Prereq., BIOB 260, 272, BIOM 360-361 or consent of instr. A broad overview of the physiological, phylogenetic and genomic diversity and ecology of microorganisms within a framework of general ecological principles. Focuses on microbial interactions with their environment at the level of the individual, population and community, including intimate associations with plants and animals. Surveys current methods for studying microbial ecology and diversity in the environment.	3 Credits
	CSCI 451 - Computational Biology Offered Autumn. Designed for attendance by both computer scientists and biologists. The course will explore the interdisciplinary nature at the juncture of the two fields. Students will be introduced to bioinformatics (emphasis: computational genomics), with exposure to fundamental problems, algorithms, and tools in the field. This includes a basic introduction to genomics, along with in-depth coverage of algorithms and methods relevant to modern computational genomics, including: biological sequence alignment, sequence database homology search, and phylogeny inference. The programming expectations are limited for a 400-level computer science course, but at least one semester of a programming-intensive course is required. Credit not allowed for CSCI 558 and this course	3 Credits
Minimum Required Grade: C-		9-12 Total Credits Required

Physiology Requirement

Rule: Complete at least one of the following courses (labs must also be taken, if available)
Note: If BIOM 450 Microbial Physiology, then BIOM 451 Microbial Physiology Lab must also be taken.

If BIOO 433 Plant Physiology, then BIOO 434 Plant Physiology Lab must also be taken.

	Course	**Credits**

	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOL 435 - Comparative Animal Physiology Offered spring. Prereq., BIOB 260 or equivalent. Animal physiology with emphasis on diversity of functional processes, with strong links to broader ecological and evolutionary contexts.	3 Credits
	BIOM 450 - Microbial Physiology Offered autumn. Prereq., BIOM 360-361. Microbial structure and function, physiological diversity, microbial metabolism, role of microbial activity in the environment.	3 Credits
	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits
Minimum Required Grade: C-		3 or 4 Total Credits Required

Required Courses Outside of the Major

Minimum Required Grade: C-

Mathematics - Calculus

Rule: Complete one of the following calculus courses

Note: Choose M 171 if you plan to take additional calculus courses, or if you plan a double major or minor in a field that requires more calculus (e.g. math, physics, biochemistry, computer science).

	Course	**Credits**
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits

Minimum Required Grade: C-	4 Total Credits Required

Mathematics - Statistics

Rule: Complete either one semester of statistics (STAT 216) or a full year of statistics (STAT 451/457 and 452/458)

	Course	Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	STAT 451 - Statistical Methods I Offered autumn. Prereq., one year of college mathematics including M 115 or equiv. course in probability or consent of instr. May not be counted toward a major in mathematics. Intended primarily for non-mathematics majors who will be analyzing data. Graphical and numerical summaries of data, elementary sampling, designing experiments, probability as a model for random phenomena and as a tool for making statistical inferences, random variables, basic ideas of inference and hypothesis testing. Level: Undergraduate-Graduate	3 Credits
	STAT 452 - Statistical Methods II Offered spring. Prereq., STAT 451. Continuation of STAT 451. May not be counted toward a major in mathematics. Multiple regression, experimental design, analysis of variance, other statistical models. Level: Undergraduate-Graduate	3 Credits
	STAT 457 - Computer Data Analysis I Offered autumn. Coreq., STAT 451 or consent of instr. An introduction to software for doing statistical analyses. Intended primarily for students in STAT 451. Level: Undergraduate-Graduate	1 Credits
	STAT 458 - Computer Data Analysis II Offered spring. Coreq., STAT 452 or consent of instr. Continuation of STAT 457. Intended primarily for students in STAT 452. Level: Undergraduate-Graduate	1 Credits
Minimum Required Grade: C-		4 or 8 Total Credits Required

Chemistry

Rule: Complete either one year of chemistry (CHMY 121N, 123N/124N) or two years of chemistry (CHMY 141N, 143N, 221/222, 223/224)

	Course	Credits

	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
Minimum Required Grade: C-		8 or 20 Total Credits Required

Physics

Rule: All of the following courses are required

Note: These are algebra- and trigonometry-based physics courses. The calculus-based physics sequence, PHSX 215N/216N & 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N & 207N/208N.

	Course	**Credits**

	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course)

Note: To meet the Upper Division Writing Expectation for the Major, Biology students take 2 or 3 partial writing courses (either three 1/3 writing courses or one 1/3 writing course and one 2/3 writing course) or one complete writing course. The Genetics & Evolution Option requires one 2/3 writing course: BIOE 371. The UD Writing Expectation for the Major is completed with one additional course, chosen from any of the following.

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	**Credits**
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits

	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits

	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	Credits
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits

	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	Credits
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Bachelor of Science - Medical Laboratory Science; Track: 3 + 1

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 101

Required Cumulative GPA: 2.0

Note: A Medical Laboratory Science degree prepares students to perform various chemical, histological, and microbial laboratory procedures used in the diagnosis, study, and treatment of disease. Students with this degree seek employment in hospital laboratories, physicians' offices, and health departments. For clinical practice, a student must be certified through the Board of Registry by completing a one year clinical practicum. The 3+1 track is the faster option, as the clinical practicum year is part of the degree. Three years are spent on the UM campus, and then the clinical practicum year with the MUS CLS program (or with one of our affiliated programs) is the fourth year of the Bachelor's degree. Note: this degree requires a total of 130 credits.

Lower Division Biology Courses

Rule: All of the following courses are required.

Note: Either BIOB 160N (C- or better) or BCH 110/111 (C- or better) or BIOH 112 (B- or better) must be taken as a prerequisite for BIOB 260, unless a student has AP Biology credit.

	Course	**Credits**
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Required Major Courses for Medical Technology 3 + 1

Rule: All of the following courses are required

	Course	**Credits**

	BCH 380 - Biochemistry Offered autumn and spring. Prereq., CHMY 223 or BIOB 260. Fundamental biochemistry; chemistry and metabolism of biomolecules, energy relationships in metabolism; storage, transmission, and expression of genetic information. Credit not allowed for both BCH 380 and 480-482.	4 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOH 365 - Human AP I for Health Profsns Offered autumn. Prereq., CHMY 121N or CHMY 141N; BIOB 160N or BIOH 112 or 113. Introduction to basic cellular structure and function. The fundamental facts and concepts of the anatomy and physiology of cells and tissues, the integumentary, musculoskeletal, nervous and special senses with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
	BIOH 405 - Hematology Offered autumn. Prereq., junior level or consent of instr., BIOM 360. Study of blood and diseases of the circulatory system. Blood banking and serology.	3 Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOM 403 - Medicl Bacteriolgy & Myclgy Lb Offered spring. Prereq. or coreq., BIOM 402. Laboratory study of pathogenic bacteria and fungi.	2 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOM 428 - General Parasitology Lab Offered autumn. Coreq., BIOM 427. Taxonomy, morphology and identification of parasitic protozoa, helminths and arthropods.	2 Credits
	BIOM 435 - Virology Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535.	3 Credits
Minimum Required Grade: C-		31 Total Credits Required

Required Professional Practicum

Rule: All of the following courses are required

Note: You must apply for the professional practicum during the autumn prior to enrollment. To be competitive for this practicum, you must be in good academic standing with a minimum GPA of ~3.0, and demonstrate a commitment to the clinical laboratory profession. For more information, visit: http://www.umt.edu/medtech/default.html. Contact Dr. Mike Minnick to apply for the practicum.

	Course	Credits
	BIOH 470 - Summer Clinical Laboratory Offered summer. Prereq., successful completion of medical laboratory science 3+1 on-campus curriculum, admittance into one of our affiliated clinical practicum programs, and consent of instructor. Professional training in clinical laboratory sciences (medical laboratory science).	12 Credits
	BIOH 471 - Professional Training I Offered autumn. Prereq., BIOH 470. Continuation of BIOH 470. Professional training at clinical site(s).	13 Credits
	BIOH 472 - Professional Training II Offered spring. Prereq., BIOH 471. Continuation of BIOH 471. Professional training at clinical site(s).	12 Credits
Minimum Required Grade: C-		37 Total Credits Required

Required Courses Outside the Major

Mathematics - Calculus

Rule: Complete one of the following calculus courses

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Mathematics - Statistics

Rule: The following course is required

	Course	Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Chemistry

Rule: All of the following courses are required

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
Minimum Required Grade: C-		15 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course) or one complete writing course.

Note: To meet the Upper Division Writing Expectation for the Major, Medical Laboratory Science 3+1 students take two 1/3 writing courses (BIOB 410 and BIOM 402). The Upper Division Writing Expectation for the Major is completed with one more course, chosen from any of the following. (BIOB 411 Immunology Lab is recommended by many of the clinical practicum affiliates).

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits

	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits

2/3 UD Writing Courses

__	**Course**	**Credits**
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits

	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits

Complete UD Writing Course

	Course	**Credits**
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Languages Requirement. Either of these calculus courses (required by the major) will satisfy this requirement.

	Course	**Credits**
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits

	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Medical Laboratory Science 4+1

Bachelor of Science - Medical Laboratory Science; Track: 4+1

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 86

Required Cumulative GPA: 2.0

Note: A Medical Laboratory Science degree prepares students to perform various chemical, histological, and microbial laboratory procedures used in the diagnosis, study, and treatment of disease. Students with this degree seek employment in hospital laboratories, physicians' offices, and health departments. For clinical practice, a student must be certified through the Board of Registry by completing a one year clinical practicum. The 4+1 track is the more flexible option, in which students complete the four years of the Bachelor's degree on the UM campus. Students may apply to a clinical practicum program anywhere in the country.

Lower Division Biology Courses

Rule: All of the following courses are required.

Note: Either BIOB 160N (C- or better) or BCH 110/111 (C- or better) or BIOH 112 (B- or better) must be taken as a prerequisite for BIOB 260, unless a student has AP Biology credit.

	Course	**Credits**
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits

Minimum Required Grade: C-	8 Total Credits Required

Required Major Courses for Medical Technology 4 + 1

Rule: All of the following courses are required

Note: BCH 480-482 may be substituted for BCH 380.

	Course	Credits
	BCH 380 - Biochemistry Offered autumn and spring. Prereq., CHMY 223 or BIOB 260. Fundamental biochemistry; chemistry and metabolism of biomolecules, energy relationships in metabolism; storage, transmission, and expression of genetic information. Credit not allowed for both BCH 380 and 480-482.	4 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOH 365 - Human AP I for Health Profsns Offered autumn. Prereq., CHMY 121N or CHMY 141N; BIOB 160N or BIOH 112 or 113. Introduction to basic cellular structure and function. The fundamental facts and concepts of the anatomy and physiology of cells and tissues, the integumentary, musculoskeletal, nervous and special senses with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
	BIOH 405 - Hematology Offered autumn. Prereq., junior level or consent of instr., BIOM 360. Study of blood and diseases of the circulatory system. Blood banking and serology.	3 Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOM 403 - Medicl Bacteriolgy & Myclgy Lb Offered spring. Prereq. or coreq., BIOM 402. Laboratory study of pathogenic bacteria and fungi.	2 Credits

	BIOM 407 - Clinical Diagnosis Offered spring. Prereq., BIOM 360-361 or BIOH 365 or BIOM 402/403 (may concur). Principles of blood chemistry, urinalysis, blood banking, serology and other clinical parameters of disease and health.	2 Credits
	BIOM 408 - Clinical Diagnosis Lab Offered spring. Prereq., or coreq., BIOM 407, and BIOM 360-361 or BIOH 365 or BIOM 402/403 (may concur). Clinical diagnostic methods.	1 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOM 428 - General Parasitology Lab Offered autumn. Coreq., BIOM 427. Taxonomy, morphology and identification of parasitic protozoa, helminths and arthropods.	2 Credits
	BIOM 435 - Virology Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535.	3 Credits
Minimum Required Grade: C-		36 Total Credits Required

Required Courses Outside the Major

Mathematics - Calculus

Rule: Complete one of the following calculus courses

	Course	**Credits**
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Mathematics - Statistics

Rule: The following course is required

	Course	Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Chemistry

Rule: All of the following courses are required

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
	CHMY 311 - Analytical Chem-Quant Analysis Offered autumn. Prereq., one year of college chemistry, including laboratory. Classroom and laboratory work in gravimetric, volumetric, colorimetric and electrochemical methods of analysis; theory of errors; ionic equilibria in aqueous solutions.	4 Credits
Minimum Required Grade: C-		24 Total Credits Required

Physics

Rule: All of the following courses are required

Note: These are algebra- and trigonometry-based physics courses. The calculus-based sequence, PHSX 215N/216N & 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N & 207N/208N.

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course).

Note: To meet the Upper Division Writing Expectation for the Major, Medical Laboratory Science 4+1 students take BIOB 410 (a 1/3 writing course) and BIOB 411 (a 2/3 writing course).

Minimum Required Grade: C-

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Languages Requirement. Either of these calculus courses (required by the major) will satisfy this requirement.

	Course	Credits

	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Microbiology B.S.

Bachelor of Science - Microbiology

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 91

Required Cumulative GPA: 2.0

Note: Microbiology is the study of microorganisms including bacteria, fungi, viruses, and protozoa. This general microbiology option emphasizes microbial structure and function, as well as interactions with humans. This is a graduate prep program, and is appropriate for students interested in research careers in academia or private or government laboratories. It is also an excellent option for pre-medical sciences students.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	**Credits**
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits

	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Microbiology Core Courses

Rule: All of the following courses are required.

	Course	**Credits**
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits

	BIOM 410 - Microbial Genetics Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.	3 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 415 - Microbial Dvrsty Eclgy & Evltn Offered spring. Prereq., BIOB 260, 272, BIOM 360-361 or consent of instr. A broad overview of the physiological, phylogenetic and genomic diversity and ecology of microorganisms within a framework of general ecological principles. Focuses on microbial interactions with their environment at the level of the individual, population and community, including intimate associations with plants and animals. Surveys current methods for studying microbial ecology and diversity in the environment.	3 Credits
	BIOM 450 - Microbial Physiology Offered autumn. Prereq., BIOM 360-361. Microbial structure and function, physiological diversity, microbial metabolism, role of microbial activity in the environment.	3 Credits
	BIOM 451 - Microbial Physiology Lab Offered autumn. Coreq., BIOM 450. Experimental approaches to analysis of microbial structure, composition and metabolism.	1 Credits
Minimum Required Grade: C-		19 Total Credits Required

Additional UD Major Courses Required for Microbiology

Minimum Required Grade: C-

Biochemistry

Rule: Complete either one semester of biochemistry (BCH 380) or one year of biochemistry (BCH 480-482)

	Course	Credits
	BCH 380 - Biochemistry Offered autumn and spring. Prereq., CHMY 223 or BIOB 260. Fundamental biochemistry; chemistry and metabolism of biomolecules, energy relationships in metabolism; storage, transmission, and expression of genetic information. Credit not allowed for both BCH 380 and 480-482.	4 Credits

	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
Minimum Required Grade: C-		4 or 6 Total Credits Required

Additional UD Depth Courses in Microbiology

Rule: Complete 7 - 9 credits from the following list (labs must be taken with lectures, if available). 7 credits if BCH 480-482 taken; 9 credits if BCH 380 taken.

Note: If BIOB 410 Immunology, then BIOB 411 Immunology Lab must also be taken.
If BIOM 402 Medical Bacteriology & Mycology, then BIOM 403 Medical Bacteriology & Mycology Lab must also be taken.
If BIOM 407 Clinical Diagnosis, then BIOM 408 Clinical Diagnosis Lab must also be taken.
If BIOM 427 General Parasitology, then BIOM 428 General Parasitology Lab must also be taken.

__	**Course**	**Credits**
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOH 405 - Hematology Offered autumn. Prereq., junior level or consent of instr., BIOM 360. Study of blood and diseases of the circulatory system. Blood banking and serology.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits

	BIOM 403 - Medicl Bacteriolgy & Myclgy Lb Offered spring. Prereq. or coreq., BIOM 402. Laboratory study of pathogenic bacteria and fungi.	2 Credits
	BIOM 407 - Clinical Diagnosis Offered spring. Prereq., BIOM 360-361 or BIOH 365 or BIOM 402/403 (may concur). Principles of blood chemistry, urinalysis, blood banking, serology and other clinical parameters of disease and health.	2 Credits
	BIOM 408 - Clinical Diagnosis Lab Offered spring. Prereq., or coreq., BIOM 407, and BIOM 360-361 or BIOH 365 or BIOM 402/403 (may concur). Clinical diagnostic methods.	1 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOM 428 - General Parasitology Lab Offered autumn. Coreq., BIOM 427. Taxonomy, morphology and identification of parasitic protozoa, helminths and arthropods.	2 Credits
	BIOM 435 - Virology Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535.	3 Credits
	BIOM 490 - Adv Undergrad Research (R-10) Offered every term. Prereq., BIOM 360, junior or senior standing and consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit.	1 To 10 Credits
Minimum Required Grade: C-		7 or 9 Total Credits Required

Required Courses Outside of the Major

Minimum Required Grade: C-

Mathematics

Rule: All of the following courses are required.

Note: M 171 Calculus I may be substituted for M 162.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits

	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Chemistry

Rule: All of the following courses are required.

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
	CHMY 311 - Analytical Chem-Quant Analysis Offered autumn. Prereq., one year of college chemistry, including laboratory. Classroom and laboratory work in gravimetric, volumetric, colorimetric and electrochemical methods of analysis; theory of errors; ionic equilibria in aqueous solutions.	4 Credits
Minimum Required Grade: C-		24 Total Credits Required

Physics

Rule: All of the following courses are required.

Note: These are algebra- and trigonometry-based physics courses. The calculus-based physics sequence, PHSX 215N/216N & PHSX 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N & 207N/208N.

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course)

Note: To meet the Upper Division Writing Expectation for the Major, Microbiology students take at least 2 partial writing courses. The Microbiology degree requires one 2/3 writing course (BIOM 411). The UD Writing Expectation for the Major is completed with one more course, chosen from any of the following.

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits

	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits
	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits

	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	Credits
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits

	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	Credits
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Bachelor of Science - Microbiology; Microbial Ecology Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 76

Required Cumulative GPA: 2.0

Note: Microbiology is the study of microorganisms including bacteria, fungi, viruses, and protozoa. The option in Microbial Ecology emphasizes microbial structure and function as well as interactions and relationships with the environment and other organisms. Students may continue their studies at the graduate level and seek research careers in government, or private laboratories.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits

	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Microbiology Core Courses

Rule: All of the following courses are required.

	Course	Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
	BIOM 410 - Microbial Genetics Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.	3 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 415 - Microbial Dvrsty Eclgy & Evltn Offered spring. Prereq., BIOB 260, 272, BIOM 360-361 or consent of instr. A broad overview of the physiological, phylogenetic and genomic diversity and ecology of microorganisms within a framework of general ecological principles. Focuses on microbial interactions with their environment at the level of the individual, population and community, including intimate associations with plants and animals. Surveys current methods for studying microbial ecology and diversity in the environment.	3 Credits
	BIOM 450 - Microbial Physiology Offered autumn. Prereq., BIOM 360-361. Microbial structure and function, physiological diversity, microbial metabolism, role of microbial activity in the environment.	3 Credits

	BIOM 451 - Microbial Physiology Lab Offered autumn. Coreq., BIOM 450. Experimental approaches to analysis of microbial structure, composition and metabolism.	1 Credits
Minimum Required Grade: C-		19 Total Credits Required

Additional UD Major Courses Required for Microbial Ecology Option

Minimum Required Grade: C-

Biochemistry

Rule: Complete either one semester of biochemistry (BCH 380) or one year of biochemistry (BCH 480-482)

Note: If one year of chemistry is completed, then BCH 380 must be taken. Either BCH 380 or BCH 480-482 may be taken if two years of chemistry are completed.

	Course	Credits
	BCH 380 - Biochemistry Offered autumn and spring. Prereq., CHMY 223 or BIOB 260. Fundamental biochemistry; chemistry and metabolism of biomolecules, energy relationships in metabolism; storage, transmission, and expression of genetic information. Credit not allowed for both BCH 380 and 480-482.	4 Credits
	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
Minimum Required Grade: C-		4 or 6 Total Credits Required

Additional UD Depth Courses in Microbiology

Rule: Complete 7 - 9 credits from the following list (labs must be taken with lectures, if available). 7 credits if BCH 480-482 taken; 9 credits if BCH 380 taken.

Note: If BIOB 410 Immunology, then BIOB 411 Immunology Lab must also be taken.
If BIOM 427 General Parasitology, then BIOM 428 General Parasitology Lab must also be taken.
If BIOO 433 Plant Physiology, then BIOO 434 Plant Physiology Lab must also be taken.

	Course	Credits

	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 440 - Biological Electron Microscopy Offered spring. Prereq., senior standing or consent of instr. Theory of electron microscopy, recent developments in transmission and scanning electron microscopy. Limited experience with the instruments.	2 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOE 439 - Stream Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N. The biota and biogeochemical processes of running waters with unifying principles and contemporary research approaches.	3 Credits
	BIOE 453 - Ecology of Small & Large Lakes Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N and CHMY 123N. The physical, chemical and biological characteristics of lake ecosystems with an emphasis on nutrient cycling, food web interactions and water quality.	3 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOM 428 - General Parasitology Lab Offered autumn. Coreq., BIOM 427. Taxonomy, morphology and identification of parasitic protozoa, helminths and arthropods.	2 Credits
	BIOM 435 - Virology Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535.	3 Credits
	BIOM 490 - Adv Undergrad Research (R-10) Offered every term. Prereq., BIOM 360, junior or senior standing and consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit.	1 To 10 Credits

	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
Minimum Required Grade: C-		7 or 9 Total Credits Required

Required Courses Outside of the Major

Minimum Required Grade: C-

Mathematics - Calculus

Rule: Complete one of the following calculus courses

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Mathematics - Statistics

Rule: The following course is required

	Course	Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits

Minimum Required Grade: C-	4 Total Credits Required

Chemistry

Rule: Complete either one year of chemistry (CHMY 121N, 123N/124N) or two years of chemistry (CHMY 141N, 143N, 221/222, 223/224)

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
Minimum Required Grade: C-		8 or 20 Total Credits Required

Physics

Rule: The following courses are required.

Note: PHSX 205N/206N & 207N/208N are algebra- and trigonometry-based physics courses. The calculus-based physics sequence, PHSX 215N/216N & 217N/218N (which require M 171 and M 172), may be substituted for PHSX 205N/206N and 207N/208N.

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		5 Total Credits Required

Additional Science Requirement

Rule: Complete at least 6 credits from the following list of courses

	Course	Credits
	CHMY 311 - Analytical Chem-Quant Analysis Offered autumn. Prereq., one year of college chemistry, including laboratory. Classroom and laboratory work in gravimetric, volumetric, colorimetric and electrochemical methods of analysis; theory of errors; ionic equilibria in aqueous solutions.	4 Credits
	CSCI 135 - Fund of Computer Science I Offered autumn and spring. Prereq., computer programming experience in a language such as BASIC, Pascal, C, etc. Fundamental computer science concepts using the high level structured programming language, Java.	3 Credits
	ENSC 245N - Soils Offered autumn and spring. Prereq., CHMY 121N (CHEM 151N). An introduction to the chemical, physical, biological and morphological properties of soils.	3 Credits
	GEO 420 - Hydrogeology Offered spring. Prereq., GEO 101N-102N; PHSX 205N/206N or PHSX 215N/216N ; M 162 or 171 strongly recommended or consent of instr. Occurrence, movement, quality, and methods of quantification of groundwater. Geological framework and physics of groundwater flow. Supply, contamination, and management problems.	4 Credits

	GEO 482 - Global Change Offered Spring. Same as CCS 482. Prereq., upper division/higher standing in Geosciences or consent of instructor. Lectures, readings, discussions and practicum on the complexity of global climate. Emphasizes the physical, geochemical and geologic processes affecting climate change over geologic and recent time scales.	3 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
	M 273 - Multivariable Calculus Offered autumn and spring. Prereq., M 172 or 182. Calculus of functions of several variables; differentiation and elementary integration. Vectors in the plane and space.	4 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	STAT 451 - Statistical Methods I Offered autumn. Prereq., one year of college mathematics including M 115 or equiv. course in probability or consent of instr. May not be counted toward a major in mathematics. Intended primarily for non-mathematics majors who will be analyzing data. Graphical and numerical summaries of data, elementary sampling, designing experiments, probability as a model for random phenomena and as a tool for making statistical inferences, random variables, basic ideas of inference and hypothesis testing. Level: Undergraduate-Graduate	3 Credits
	STAT 452 - Statistical Methods II Offered spring. Prereq., STAT 451. Continuation of STAT 451. May not be counted toward a major in mathematics. Multiple regression, experimental design, analysis of variance, other statistical models. Level: Undergraduate-Graduate	3 Credits
	STAT 457 - Computer Data Analysis I Offered autumn. Coreq., STAT 451 or consent of instr. An introduction to software for doing statistical analyses. Intended primarily for students in STAT 451. Level: Undergraduate-Graduate	1 Credits

	STAT 458 - Computer Data Analysis II Offered spring. Coreq., STAT 452 or consent of instr. Continuation of STAT 457. Intended primarily for students in STAT 452. Level: Undergraduate-Graduate	1 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Writing Expectation for the Major

Rule: Complete the equivalent of a full writing course (either three 1/3 writing courses or one 2/3 writing course + one 1/3 writing course or one complete writing course).

Note: To meet the Upper Division Writing Expectation for the Major, Microbiology students take at least 2 partial writing courses. The Microbiology degree requires one 2/3 writing course (BIOM 411). The UD Writing Expectation for the Major is completed with one more course, chosen from any of the following.

Minimum Required Grade: C-

1/3 UD Writing Courses

	Course	Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 483 - Phylogenetics and Evolution Offered alternating spring semesters. Prereq., BIOB 260 and BIOB 272. Phylogenies, or evolutionary trees, provide insights into the history of life on Earth, including our own origins. This course focuses on the theoretical foundations of popular methods of reconstructing phylogenies from molecular sequence data and how to implement these methods with computational software for real data sets. Other current methods for testing evolutionary hypotheses with sequence data will also be introduced.	3 Credits

	BIOE 403 - Vert Design & Evolution Offered spring. Prereq., BIOB 170N, 171N and 272 and either PHSX 205N/206N or 215N/216N. Evolutionary patterns of animal morphology and the importance of body size on life history patterns. Phylogenetic study of major extant and extinct vertebrate groups. Laboratory includes systematic study of organ systems and workshops in experimental functional morphology.	5 Credits
	BIOE 409 - Behavior & EvolutionDiscussion Offered autumn. Co-req., BIOE 406. Diversity of animal behavior in an evolutionary context including inheritance of behavior, diets, avoidance responses, mating systems and sexual selection, parental care, and evolution of animal groups and societies. This discussion course complements the lectures of BIOE 406 by examining both landmark and recent literature. It also includes a written component.	1 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOL 484 - Plant Evolution Offered fall, alternate years. Prereq., BIOB 272. Lecture, reading and discussion on the evolutionary processes that shape major patterns of plant diversity. Topics include but are not restricted to: local adaptation, floral and mating system evolution, polyploidy, genome evolution, and speciation.	3 Credits
	BIOM 402 - Medical Bacteriology& Mycology Offered spring. Prereq., BIOM 360, 361. A study of the pathogenic bacteria and fungi and the diseases they produce.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 434 - Plant Physiology Lab Offered spring. Prereq or coreq., BIOO 433. Laboratory exercises designed to familiarize students with concepts and techniques in plant physiology.	1 Credits
	BIOO 470 - Ornithology Offered spring. Prereq. or Coreq., BIOB 272; major of biology, Pre-Wildlife Biology, or Wildlife Biology, and must be of junior or senior standing. The classification, structure, evolution, behavior and ecology of birds.	4 Credits
	BIOO 475 - Mammalogy Offered autumn. Prereq., BIOB 272. The evolution, systematics, anatomy, physiology and ecology of mammals.	4 Credits
Minimum Required Grade: C-		

2/3 UD Writing Courses

	Course	**Credits**

	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 499 - Senior Thesis/Capstone (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.	3 To 6 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 371 - Gen Ecology Lab (equiv to 271) Offered autumn. Prereq. or Coreq., BIOE 370 and either STAT 216 or WILD 240. Methods of describing and testing alternative explanations for patterns in nature. The use of scientific methodology in ecology.	2 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 499 - Undergraduate Thesis (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Biological Sciences Undergraduate Research Symposium or a scientific meeting. Graded credit/no credit.	3 To 6 Credits
Minimum Required Grade: C-		

Complete UD Writing Course

	Course	**Credits**

	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits

Exception to the Modern/Classical Languages Requirement

Rule: Choose one of the following Math courses

Note: The Division of Biological Sciences has been granted an exception to the Modern/Classical Language Requirement. Either of these Calculus courses (required by the major) will satisfy this requirement.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		

Biology Minor

Minor - Biology

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 25
Required Cumulative GPA: 2.0

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division BIO_ courses.

AP Biology may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits

	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Biology Requirement for the Minor

Rule: Complete 8 credits of Upper Division in Biology (BIOB, BIOE, BIOH, BIOL, or BIOO)

Note: These eight credits may not include BIOC, BCH, or BIOM courses.

Minimum Required Grade: C-

8 Total Credits Required

Teaching Biology Minor

A teaching minor is an academic minor which may contain different course requirements designed to meet state standards. Those interested in teaching in K-12 schools must complete a teaching major in a content area plus the teacher preparation program through the Department of Curriculum and Instruction. Additional teaching areas can be added through completion of either a teaching major or a teaching minor in that content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a major/minor form for graduation or the major/minor/concentration section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Tracks will not appear on your UM transcript, diploma, university lists, student data system, or university publication and are used for advising purposes only. You do not fill out a major change for a track.

Minor - Biology; Track: Teaching Biology

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 43

Required Cumulative GPA: 2.75

Note: In order to be licensed to teach secondary biology, students must be admitted to the Teacher Education Program through the Phyllis J. Washington College of Education and Human Sciences.

Biology/Microbiology Lower Division Core

Rule: All of the following courses are required.

Note: The lower division core should be completed before attempting most upper division major courses.

AP Biology credit may be substituted for either BIOB 160N/161N or BIOB 170N/171N.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 171N - Princpls Biological Dvrsty Lab Offered spring and summer. Coreq., BIOB 170N. The diversity of life including prokaryotes, viruses, protista, fungi, plants and animals including structure and evolutionary relationships.	2 Credits

	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		17 Total Credits Required

Upper Division Core Courses Required by the Biology Teaching Minor

Rule: All of the following courses are required.

	Course	Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
Minimum Required Grade: C-		5 Total Credits Required

Required Content Courses Outside of the Major

Minimum Required Grade: C-

Mathematics - Calculus

Rule: Complete one of the following calculus courses

Note: Choose M 171, if you plan to take additional calculus courses, or if you plan a double major or minor in a field that requires more calculus (e.g. math, physics, biochemistry, computer science).

	Course	Credits

	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Mathematics - Statistics

Rule: The following course is required

	Course	**Credits**
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Chemistry

Rule: All of the following courses are required

	Course	**Credits**
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits

	CHMY 485 - Laboratory Safety Offered autumn. Prereq., one year of college chemistry. Awareness of and methods of control of hazards encountered in laboratory work. Awareness of legal constraints on work with chemicals. Sources of information regarding chemical hazards.	1 Credits
Minimum Required Grade: C-		7 Total Credits Required

Environmental Geosciences

Rule: Complete one of the following courses

	Course	Credits
	GEO 105N - Oceanography Offered spring. The ocean covers 70 % of the globe, and yet vast regions remain unexplored. Interactions between the atmosphere and the sea moderate and control our climate. Nearly 40 % of the world's population lives within 100 kilometers of the coast. The oceans are geographically, environmentally, culturally, and economically critical to society. This course introduces oceanography, including the origin of water and ocean basins; marine resources; atmospheric circulation; air-sea interaction; ocean-climate feedback; currents, tides, and coastal processes; marine ecology; and use and misuse of the oceans.	3 Credits
	GEO 108N - Climate Change Offered autumn. The geoscience perspective on the earth's climate system. Climate processes and feedbacks, climate history from early earth to the ice ages, present and future changes due to natural processes and human activities.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Education

Rule: The following course is required

Note: The course number EDU 497 covers many different teaching method courses. The section of EDU 497 entitled "Methods: 5 - 12 Science" is required for the Teaching Biology minor.

	Course	Credits
	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and	0 To 4 Credits

	operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	
Minimum Required Grade: C-		3 Total Credits Required

Secondary Teaching Licensure

Note: For endorsement to teach biology, a student also must gain admission to the Teacher Education Program and meet all the requirements for secondary teaching licensure (see the College of Education & Human Sciences)

Microbiology Minor

Minor - Microbiology

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 19
Required Cumulative GPA: 2.0

Microbiology Core Courses

Rule: All of the following courses are required.

	Course	Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
	BIOM 410 - Microbial Genetics Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.	3 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 415 - Microbial Dvrsty Eclgy & Evltn Offered spring. Prereq., BIOB 260, 272, BIOM 360-361 or consent of instr. A broad overview of the physiological, phylogenetic and genomic diversity and ecology of microorganisms within a framework of general ecological principles. Focuses on microbial interactions with their environment at the level of the individual, population and community, including intimate associations with plants and animals. Surveys current methods for studying microbial ecology and diversity in the environment.	3 Credits
	BIOM 450 - Microbial Physiology Offered autumn. Prereq., BIOM 360-361. Microbial structure and function, physiological diversity, microbial metabolism, role of microbial activity in the environment.	3 Credits

	BIOM 451 - Microbial Physiology Lab Offered autumn. Coreq., BIOM 450. Experimental approaches to analysis of microbial structure, composition and metabolism.	1 Credits
Minimum Required Grade: C-		16 Total Credits Required

Additional Upper Division Microbiology Requirement

Rule: Complete 3 additional upper division credits in BIOM

Minimum Required Grade: C-

3 Total Credits Required

Geography Department

David Shively, Chair

Whether global climate change or local land use change – geography provides an understanding of complex natural, social, and human-environmental processes at different geographic scales. Drawing on and expanding the knowledge base of Natural Sciences, Social Sciences, and Geographic Information Sciences, we focus on Mountain Studies, Community and Environmental Planning, and Geographic Information Systems.

Our graduates are successful in occupying meaningful and challenging positions in public, private, and non-profit sectors. Their contributions speak to the impacts Geographers have in analyzing, understanding, and shaping our natural and human landscapes for the benefit of future generations.

The Department of Geography offers the Bachelor of Arts, Bachelor of Science, Master of Arts, and Master of Sciences degrees in geography. For a B.A. in geography, an option in community and environmental planning is available. For a B.S. in geography an option in physical geography is available. Also offered are a minor in geography and a teaching major and minor in geography. Several interdisciplinary minors are available to students: a minor in mountain studies, a minor in climate change and a minor in international development studies. See the Graduate School website for more information concerning the M.A. and M.S. programs.

A certificate in GIS Sciences and Technologies, jointly offered by the Department of Geography (College of Humanities and Sciences) and the Department of Forest Management (College of Forestry and Conservation), is also available. This GIST certificate is a complement to an existing major or to a bachelor's degree already obtained. For details, please see below or the GIST website.

Earth Systems

Back to Top

- ERTH 303N - Weather and Climate
  Credits: 3. Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra. Course Attributes: Natural Science Course (N)

Geography

Back to Top

- GPHY 111N - Intro to Physical Geography
  Credits: 3. Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes. Course Attributes: Natural Science Course (N)
- GPHY 112N - Intro to Phys Geography Lab
  Credits: 1. Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385. Course Attributes: Natural Science Lab Course (N) Natural Science Course (N)
- GPHY 121S - Human Geography
  Credits: 3. Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences. Course Attributes: Social Sciences Course (S) Cultural Intl Diversity (X)
- GPHY 141S - Geography of World Regions
  Credits: 3. Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood. Course Attributes: Social Sciences Course (S) Cultural Intl Diversity (X)
- GPHY 144 - Montana's Mountains
  Credits: 3. Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.
- GPHY 241 - Montana
  Credits: 3. Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.
- GPHY 243 - Africa
  Credits: 3. Offered intermittently. A survey of the biophysical and cultural geography of Sub-Saharan Africa. Emphasis is on the region's cultural-historical development and current ecological, demographic, and economic patterns.
- GPHY 245X - The Middle East

Credits: 3. Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region. Course Attributes: Cultural Intl Diversity (X)

- GPHY 284 - Intro to GIS and Cartography

  Credits: 3. Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.

- GPHY 291 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- GPHY 295 - Mountain Field Studies

  Credits: 1. Offered autumn and spring as a series of one-credit courses, maximum of three-credits per semester. Field studies of Montana's Rocky Mountain Front, Crown of the Continent, or Yellowstone. Students prepare to conduct field work, spend time in the field observing wildlife, physical landscapes and cultural aspects of these landscapes, and follow up their observations in written reports.

- GPHY 311N - Biogeography

  Credits: 3. Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts. Course Attributes: Natural Science Course (N)

- GPHY 314 - Global Mountain Environments

  Credits: 3. Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.

- GPHY 317 - Geomorphology

  Credits: 3. Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.

- GPHY 323S - Econ. Geog. of Rural Areas

  Credits: 3. Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas. Course Attributes: Social Sciences Course (S)

- GPHY 335 - Water Policy

  Credits: 3. Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy. Course Attributes: Writing Course-Advanced

- GPHY 336 - Exploration & Discovery

  Credits: 3. Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.

- GPHY 338 - Mountains and Society

  Credits: 3. Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.

- GPHY 342 - North America

  Credits: 3. Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are

explored.

- GPHY 344 - Crown of the Continent

  Credits: 3. Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.

- GPHY 347 - Regional Geography (Mult Reg)

  Credits: 3. (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.

- GPHY 348 - Field Studies in Geography

  Credits: 3. (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.

- GPHY 378 - Preceptorship in Geography

  Credits: 1 TO 3. (R-6) Offered autumn and spring. Consent of instructor. Assisting a faculty member by tutoring, conducting review sessions, helping students with research projects, and carrying out other class-related responsibilities. Open to juniors and seniors who apply to instructor for consent.

- GPHY 385 - Field Techniques

  Credits: 3. Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.

- GPHY 391 - Special Topics

  Credits: 1 TO 12. (R-12) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- GPHY 392 - Independent Study

  Credits: 1 TO 9. (R-9) Offered every term. Consent of Instructor. Independent study in any subfield of geography.

- GPHY 395 - Field Studies

  Credits: 1 TO 9. (R-9) Offered fall and/or spring. Field experience in the region. Includes geographically relevant field courses offered as part of Northwest Connections' Landscapes and Livelihood Field Semester, focusing on natural and human communities and on conservation solutions of the Southwest Crown of the Continent Region: Sustainability and Agriculture (3 cr), and Biogeography of Northwest Montana (4 cr).

- GPHY 400 - Geography Capstone

  Credits: 1. Offered autumn. Prereq.,Senior standing. Exploration of current research, projects, and programs of geographers and scientists/practitioners in allied disciplines and fields, and preparation of a professional portfolio. Student preparation for post-graduate professional and academic careers is emphasized.

- GPHY 421 - Sustainable Cities

  Credits: 3. Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.

- GPHY 432 - Human Role Environ Change

  Credits: 3. Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.

- GPHY 433 - Cultural Ecology

  Credits: 3. Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal

domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.
Course Attributes: Writing Course-Advanced

- GPHY 434 - Food and Famine

  Credits: 3. Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.

- GPHY 438 - Mountain Field Study

  Credits: 3. (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.

- GPHY 442 - Regionalism & Rocky Mtn West

  Credits: 3. Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.
  Course Attributes: Writing Course-Upper-Division

- GPHY 444 - High Asia

  Credits: 3. Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.

- GPHY 465 - Planning Princ & Processes

  Credits: 3. Offered autumn even-numbered years. Prereq., upper-division or graduate standing. Surveys planning principles, practices and issues in urban and rural environments. Attention is devoted to Montana, state planning programs in the United States., and federal programs and policies that influence land-use planning. Emphasizes skills and techniques used in plan development and implementation.

- GPHY 466 - Environmental Planning

  Credits: 3. Offered autumn odd-numbered years. Introduction to practice of environmental planning which includes elements of physical planning, planning design at the landscape scale, and conservation planning. Includes field visits and project-based work.

- GPHY 468 - Community & Regional Analysis

  Credits: 3. Offered autumn. Coreq., GPHY 469. Socio-demographic analysis of communities and regions: population, employment, and spatial interaction. Hands-on course designed for future planners, GIS analysts, and others interested in socio-demographic change. To succeed in this course students should have comfort with basic algebra.

- GPHY 469 - Planning & Analysis Laboratory

  Credits: 1. Offered autumn. Coreq., GPHY 468. Laboratory to accompany GPHY 468.

- GPHY 481 - Advanced Cartographic Design

  Credits: 3. Offered autumn. Prereq., GPHY 284 or FORS 250 or Consent of Instructor. The course concentrates on the presentation of spatial data and the construction of cartographic products that have clear communication and excellent aesthetic design. The class meets the University's service learning course objectives through a semester long project where students consult with a client, design and construct a map, and deliver a final product.

- GPHY 482 - Spatial Analysis & GIS

  Credits: 3. Offered intermittently. Prereq., GPHY 284 or Consent of Instructor. Coreq., GPHY 489. Quantitative analysis of spatial data, including techniques for pattern analysis, classification, and interpolation within a GIS environment.

- GPHY 485 - Internet GIS

  Credits: 3. Offered intermittently. Prereq., GPHY 284 or FORS 250 or Consent of Instructor. Principles and techniques for distributing GIS and mapping applications through the Internet. Students need to register for a required linked lab section.

- GPHY 486 - Transport, Planning & GIS

  Credits: 3. Offered intermittently during wintersession (2 credits) or spring semester (3 credits.) Coreq., GPHY 489. A project-oriented course focusing on patterns and trends in urban passenger

transportation, principles of transport planning, and modeling in GIS-T. To succeed in this course students should have comfort with basic algebra and statistics.

- GPHY 487 - Remote Sensing/Raster GIS

  Credits: 3. Offered autumn. Prereq. or coreq., GPHY 284 or FORS 250 or Consent of Instructor. Coreq., GPHY 489. Basic principles of remote sensing and analyzing images within a raster GIS. Review current data sources.

- GPHY 488 - Applications of GIS

  Credits: 0 TO 3. Offered spring. Prereq., GPHY 284 or GPHY 381 or FORS 250 or Consent of Instructor. Application of GIS for managing natural and cultural resources. Covers choropleth maps, dot maps, proportional figure maps, isarithmic maps, and others. Includes computer mapping and GIS exercises. Students need to register for a required linked lab section.

- GPHY 489 - Cartography/GIS Laboratory

  Credits: 1. (R-4) Offered autumn and spring. Prereq., or coreq., GPHY 482, 486 or 487. Lab to accompany cartography and GIS courses.

- GPHY 491 - Special Topics

  Credits: 0 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- GPHY 492 - Independent Study

  Credits: 1 TO 9. (R-9) Offered every term. Consent of instructor. Independent study in any subfield of geography.

- GPHY 497 - Workshop in Teaching Geography

  Credits: 2 TO 3. Offered intermittently. Concepts and techniques in geography, with emphasis on their use in teaching geography in Montana schools. Students are required to prepare and present a teaching unit project. Designed for pre-service or in-service teachers.

- GPHY 498 - Internship

  Credits: 1 TO 6. Offered every term. Consent of instructor. Extended classroom experience which provides practical application of classroom learning during placements within governmental agencies or the business community. A maximum of 6 credits of Internship may count toward graduation. Course Attributes: Internships/Practicums

- GPHY 499 - senior thesis / capstone

  Credits: 3. (R-6) Offered autumn and spring. Senior standing and consent of instructor. Independent research project in any geographical topic supervised by a faculty member, and leading to completion of the baccalaureate degree. Course Attributes: Writing Course-Advanced

- GPHY 500 - Geography Graduate Colloquium

  Credits: 1. (R-3) Offered autumn. Presentation of faculty and student research. Guest lecturers. Graded pass/not pass only. Enrollment required every autumn graduate students are in residence. Level: Graduate

- GPHY 504 - Geographical Research

  Credits: 1. Offered once a year. Prereq., or coreq., GPHY 505. To be taken during first semester of graduate studies. Understanding of diverse research approaches in geography and development of a thesis topic. To be taken during first year of graduate studies. Level: Graduate

- GPHY 505 - Research Design

  Credits: 2. Offered once a year. Prereq., or corereq GPHY 504. Preparation of a thesis proposal: research design, data collection, analysis, interpretation, and presentation. Recommended to be taken during the first year of graduate studies. Level: Graduate

- GPHY 520 - Seminar Geographical Thought

  Credits: 3. Offered once a year. Geographical ideas, concepts, approaches, and techniques from ancient to modern times. Recommended to be taken during first year of graduate studies. Level: Graduate

- GPHY 525 - Advanced Physical Geography

  Credits: 3. (R-9) Offered intermittently. Advanced topics in climate and global change, paleo-environments and biogeography, landform analysis, soils, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate

- GPHY 550 - Seminar in Geography

  Credits: 3. (R-9) Offered intermittently. Seminar topics in geography and society, human-environmental interaction, physical geography, regional geography, or geographical techniques. Level: Graduate

- GPHY 560 - Seminar in Planning

  Credits: 3. Offered spring odd-numbered years. A critical analysis of land planning history, theory, approaches, and practice. Emphasis is on the United States and England. Level: Graduate

- GPHY 561 - Land Use Planning Law

  Credits: 3. Offered autumn. Same as ENST 561 and LAW 687. Basic overview of the law of land-use planning including, background in the traditional governmental regulatory, proprietary, and fiscal land use tools. Examination of modern techniques for land-use planning; consideration of constitutional limits of the authority of state and local governments. Focus on skills in interpreting, drafting, and applying state legislation and local ordinances. Level: Graduate

- GPHY 562 - Land Use Planning Clinic

  Credits: 1 TO 6. (R-6) Offered every term. Prereq. or coreq., GPHY 561. Same as ENST 562. Students assist local communities in long-range planning efforts and development of growth management plans as required by Montana law; ordinance drafting, development proposals, and land use issues. Level: Graduate

- GPHY 564 - Planning Design

  Credits: 3. Offered spring even-numbered years. Prereq., graduate standing or Consent of Instructor. Analysis of land-use problems and design. Level: Graduate

- GPHY 578 - Preceptorship in Geography

  Credits: 1 TO 3. (R-6) Offered autumn and spring. Graduate standing and Consent of Instructor. Assisting a faculty member by tutoring, helping students with research projects, and carrying out other class-related activities. Level: Graduate

- GPHY 580 - Seminar GIS & Cartography

  Credits: 3. (R-9) Offered every two years. Seminar topics in cartography and GIS. Applications to advanced studies in human and physical geography. Level: Graduate

- GPHY 587 - Image Analysis & Modeling

  Credits: 3. Offered every two years. Prereq., GPHY 487 or FORS 351 or Consent of instructor; coreq., GPHY 589. Advanced topics in image analysis (e.g. hyperspectral images and pattern-recognition-based classification) and foundations of simple raster-based models. Level: Graduate

- GPHY 588 - Spatial Analysis and Modeling

  Credits: 3. Offered autumn. Coreq., GPHY 589. Theoretical/conceptual and practical aspects of entity-based GIS modeling and spatial analysis. Point pattern analysis (i.e. cluster detection, density analysis, kriging), network analysis (i.e. network construction, network-based spatial statistics, accessibility modeling), and areal pattern analysis (i.e. spatial autocorrelative pattern, spatial regression modeling). Applications in urban and environmental planning, transportation, natural resource management, ecology, health, criminology, engineering, and business. To succeed in this course students should have familiarity with GIS. Level: Graduate

- GPHY 589 - Cartography/GIS Laboratory

  Credits: 1. (R-4) Offered autumn and spring. Laboratory to accompany GPHY 587 or 588. Level: Graduate

- GPHY 595 - Special Topics

  Credits: 1 TO 8. (R-9) Offered intermittently. Prereq., Consent of Instructor. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate

- GPHY 596 - Independent Study

  Credits: 1 TO 9. (R-9) Offered every term. Graduate standing and consent of instructor. Independent research in geography or planning. Level: Graduate Course Attributes: Independent Study

- GPHY 597 - Professional Paper

  Credits: 1 TO 6. (R-6) Offered autumn and spring. Graduate standing in Geography and Consent of Advisor. Level: Graduate

- GPHY 598 - Internship
  Credits: 1 TO 9. (R-9) Offered every term. Graduate standing and consent of instructor. Extended classroom experience which provides practical application of classroom learning during placements off campus. Level: Graduate Course Attributes: Internships/Practicums
- GPHY 599 - Thesis
  Credits: 1 TO 6. Offered every term. Graduate standing in Geography and Consent of Advisor. Level: Graduate

Geography B.A.

The general geography B.A. degree (without option) is very flexible. In addition to meeting the core requirements for all geography majors, students may take a wide range of electives in geography (minimum 11, maximum 35 elective credits). Electives may be chosen from the fields of regional geography, geographic methods and techniques, or systematic geography (physical geography, human-environment interaction, or geography and society).

Bachelor of Arts - Geography

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 36
Required Cumulative GPA: 2.5

Introduction to Geography

Rule: Must complete all of the following courses:

	Course	Credits
	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 112N - Intro to Phys Geography Lab Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385.	1 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Regional Geography Course

Rule: Must complete at least 1 of the following courses

	Course	Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits
	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits
	GPHY 241 - Montana Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.	3 Credits
	GPHY 243X - Africa Offered intermittently. A survey of the biophysical and cultural geography of Sub-Saharan Africa. Emphasis is on the region's cultural-historical development and current ecological, demographic, and economic patterns.	3 Credits
	GPHY 245X - The Middle East Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region.	3 Credits
	GPHY 342 - North America Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are explored.	3 Credits
	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 347 - Regional Geography (Mult Reg) (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.	3 Credits
	GPHY 348 - Field Studies in Geography (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.	3 Credits

	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits
	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	GPHY 445 - Regional Geography Offered intermittently. In-depth treatment of a geographic region, a particular regional problem, or the methodology of regional geography. Topics vary.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geographic Methods

Rule: Must complete all of the following courses

	Course	Credits
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Systematic Geography

Rule: Must complete the following subcategories of courses
Minimum Required Grade: C-
9 Total Credits Required

Physical Geography

Rule: Must complete at least 1 of the following courses

	Course	Credits

	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits
	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits
	GPHY 525 - Adv Physical Geography (R-9) Offered intermittently. Advanced topics in climate and global change, paleo-environments and biogeography, landform analysis, soils, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geography and Society

Rule: Must complete at least 1 of the following:

	Course	**Credits**

	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits
	GPHY 434 - Food and Famine Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.	3 Credits
	GPHY 443 - Cultural & Global Competence Offered intermittently. Prereq., upper-division or graduate standing. Designed to increase awareness of student's own culture and increase cross-cultural sensitivity. Understanding the perspectives of other cultures and resolving possible conflicts. Examination of the role of perception, belief systems, social structures, and culture practices.	3 Credits
	GPHY 515 - Adv Human Geography (R-9) Offered intermittently. Advanced topics in cultural and historical geography, gender issues, migration and population change, economic geography, urban and settlement geography, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Human Environment Interaction

Rule: Must complete at least 1 of the following:

	Course	**Credits**
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 336 - Exploration & Discovery Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.	3 Credits

	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Degree Electives

Rule: Must complete 10 credits of GPHY electives to fulfill the 36 degree credit total

Note: Students must fulfill the degree credit total of 36 credits plus the university requirement for 39 upper division credits.

Minimum Required Grade: C-

10 Total Credits Required

Capstone

Rule: Seniors must complete the following course

Note: Seniors must enroll in GPHY 400 in fall, attend GPHY 500 in fall, and complete course requirements in spring.

	Course	**Credits**
	GPHY 400 - Geography Capstone Offered autumn. Prereq.,Senior standing. Exploration of current research, projects, and programs of geographers and scientists/practitioners in allied disciplines and fields, and preparation of a professional portfolio. Student preparation for post-graduate professional and academic careers is emphasized.	1 Credits
Minimum Required Grade: C-		1 Total Credits Required

Upper Division Writing

Rule: Must complete 1 of the following courses

Note: GPHY 335 or GPHY 433 will also count toward the upper division core requirements
GPHY 499 will also count toward upper division elective credits.

	Course	Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
	GPHY 499 - senior thesis / capstone (R-6) Offered autumn and spring. Senior standing and consent of instructor. Independent research project in any geographical topic supervised by a faculty member, and leading to completion of the baccalaureate degree.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

General Ed Symbolic Systems

Rule: Must complete either 1 year of a foreign language or STAT 216 Introduction to Statistics

Note: Gen Ed credits do not count towards degree credits.

Minimum Required Grade: C-

3-10 Total Credits Required

Geography B.S.

The B.S. in Geography is designed to accommodate those students who are interested in pursuing more science-based and technical areas of study and work in the field of Geography, such as aspects involving physical geography and geospatial technologies, or environmental planning. Those pursuing a geography B.S. degree (with or without an option) must complete 6-10 additional credits (a two-course sequence) of science coursework. The classes must be selected and approved by the student and advisor as appropriate to individual student goals (e.g., BIOO 105N (BIOL 120N), BIOE 172N (BIOL 121).

Bachelor of Science - Geography

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 36

Required Cumulative GPA: 2.5

Note: Depending on the courses selected, the degree requirements vary from 36 to 39 credits.

Introduction to Geography

Rule: Must complete all of the following courses:

	Course	Credits

	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 112N - Intro to Phys Geography Lab Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385.	1 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Regional Geography Course

Rule: Must complete at least 1 of the following courses

	Course	Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits
	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits
	GPHY 241 - Montana Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.	3 Credits
	GPHY 243X - Africa Offered intermittently. A survey of the biophysical and cultural geography of Sub-Saharan Africa. Emphasis is on the region's cultural-historical development and current ecological, demographic, and economic patterns.	3 Credits
	GPHY 245X - The Middle East Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region.	3 Credits

	GPHY 342 - North America Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are explored.	3 Credits
	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 347 - Regional Geography (Mult Reg) (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.	3 Credits
	GPHY 348 - Field Studies in Geography (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.	3 Credits
	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits
	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	GPHY 445 - Regional Geography Offered intermittently. In-depth treatment of a geographic region, a particular regional problem, or the methodology of regional geography. Topics vary.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geographic Methods

Rule: Must complete all of the following courses

	Course	**Credits**
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits

	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Systematic Geography

Rule: Must complete the following subcategories of courses
Minimum Required Grade: C-
9 Total Credits Required

Physical Geography

Rule: Must complete at least 1 of the following courses

	Course	Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits
	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits

	GPHY 525 - Adv Physical Geography (R-9) Offered intermittently. Advanced topics in climate and global change, paleo-environments and biogeography, landform analysis, soils, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geography and Society

Rule: Must complete at least 1 of the following:

	Course	Credits
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits
	GPHY 434 - Food and Famine Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.	3 Credits
	GPHY 443 - Cultural & Global Competence Offered intermittently. Prereq., upper-division or graduate standing. Designed to increase awareness of student's own culture and increase cross-cultural sensitivity. Understanding the perspectives of other cultures and resolving possible conflicts. Examination of the role of perception, belief systems, social structures, and culture practices.	3 Credits
	GPHY 515 - Adv Human Geography (R-9) Offered intermittently. Advanced topics in cultural and historical geography, gender issues, migration and population change, economic geography, urban and settlement geography, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Human Environment Interaction

Rule: Must complete at least 1 of the following:

	Course	Credits

	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 336 - Exploration & Discovery Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.	3 Credits
	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Degree Electives

Rule: 36 Geography credits are required for the major. May require additional Geography elective credits to fulfill the major.

Capstone

Rule: Seniors must complete the following course

Note: Seniors must enroll in GPHY 400 in fall, attend GPHY 500 in fall, and complete course requirements in spring.

	Course	**Credits**

	GPHY 400 - Geography Capstone Offered autumn. Prereq.,Senior standing. Exploration of current research, projects, and programs of geographers and scientists/practitioners in allied disciplines and fields, and preparation of a professional portfolio. Student preparation for post-graduate professional and academic careers is emphasized.	1 Credits
Minimum Required Grade: C-		1 Total Credits Required

Upper Division Writing

Rule: Must complete 1 of the following courses

Note: GPHY 335 will also count toward the upper division core requirements
GPHY 499 will also count toward upper division elective credits.
Other science-based writing courses(e.g. GEO 320, GEO 499, BIOO 470, BIOO 475) may be approved by the advisor.

	Course	Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 499 - senior thesis / capstone (R-6) Offered autumn and spring. Senior standing and consent of instructor. Independent research project in any geographical topic supervised by a faculty member, and leading to completion of the baccalaureate degree.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Science Electives

Rule: Must complete 1 of the following science categories

Note: Science sequence must be approved by advisor as appropriate to individual student's goals. Different science sequences may be approved by the advisor.

6-10 Total Credits Required

Biology

Rule: May complete the following courses

	Course	Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits

	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Chemistry

Rule: May complete the following courses

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

College Chemistry

Rule: May complete the following courses

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

College Physics

Rule: May complete the following courses

	Course	Credits

	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics with Calculus

Rule: May complete the following courses

	Course	**Credits**
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits

	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

General Ed Symbolic Systems (Mathematics)

Rule: Must complete 1 of the following subcategories

Note: GenEd credits do not count towards degree credits.

Note: Students MUST meet the symbolic systems requirement by taking M 115 and STAT 216, OR just one of M 162, M 171, or STAT 451. M 171 Calculus is recommended.

3-7 Total Credits Required

Math Fundamentals

Rule: May complete all of the following courses

	Course	**Credits**
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		7 Total Credits Required

Advanced Math

Rule: May complete 1 of the following courses

Note: M 171 Calculus I is recommended.

	Course	**Credits**

	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	STAT 451 - Statistical Methods I Offered autumn. Prereq., one year of college mathematics including M 115 or equiv. course in probability or consent of instr. May not be counted toward a major in mathematics. Intended primarily for non-mathematics majors who will be analyzing data. Graphical and numerical summaries of data, elementary sampling, designing experiments, probability as a model for random phenomena and as a tool for making statistical inferences, random variables, basic ideas of inference and hypothesis testing. Level: Undergraduate-Graduate	3 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Physical Geography

In addition to satisfying the general requirements for a B.S. degree in geography, a student pursuing the option in physical geography must complete additional requirements, including ERTH 303N (GEOG 322N), GPHY 317 (GEOG 324), and GPHY 411N (GEOG 426N), though substitutions which broaden the student's curriculum may be approved by their advisor. Also, students must complete an additional appropriate math course above the 150 level to complement the one used to fulfill their symbolic systems requirements (the second semester of Calculus is recommended), and the two-course sequence in science used to fulfill the B.S. requirement MUST be one of the following: CHMY121N-123N (CHEM 151N-152N), CHMY 141N-143N (CHEM 161N-162N), PHSX 205N-207N (PHYS 121N-122N), PHSX 215N-217N (PHYS 211N- 212N), or BIOO 105N (BIOL 120N), BIOE 172N (BIOL 121N)).

Bachelor of Science - Geography; Physical Geography Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 47

Required Cumulative GPA: 2.5

Note: Depending on the courses selected the degree requirements vary from 47 to 56 credits.

Introduction to Geography

Rule: Must complete all of the following courses:

	Course	**Credits**

	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 112N - Intro to Phys Geography Lab Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385.	1 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Regional Geography Course

Rule: Must complete at least 1 of the following courses

	Course	Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits
	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits
	GPHY 241 - Montana Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.	3 Credits
	GPHY 243X - Africa Offered intermittently. A survey of the biophysical and cultural geography of Sub-Saharan Africa. Emphasis is on the region's cultural-historical development and current ecological, demographic, and economic patterns.	3 Credits
	GPHY 245X - The Middle East Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region.	3 Credits

	GPHY 342 - North America Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are explored.	3 Credits
	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 347 - Regional Geography (Mult Reg) (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.	3 Credits
	GPHY 348 - Field Studies in Geography (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.	3 Credits
	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits
	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	GPHY 445 - Regional Geography Offered intermittently. In-depth treatment of a geographic region, a particular regional problem, or the methodology of regional geography. Topics vary.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geographic Methods

Rule: Must complete all of the following courses

	Course	**Credits**
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits

	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Systematic Geography

Rule: Must complete the following subcategories of courses
Minimum Required Grade: C-
9 Total Credits Required

Physical Geography

Rule: Must complete at least 1 of the following courses

Note: These courses simultaneously count towards the Upper Division Systematic Geography-Physical Geography and the Physical Geography Option core (see below).

	Course	Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits

	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits
	GPHY 525 - Adv Physical Geography (R-9) Offered intermittently. Advanced topics in climate and global change, paleo-environments and biogeography, landform analysis, soils, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geography and Society

Rule: Must complete at least 1 of the following:

	Course	Credits
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits
	GPHY 434 - Food and Famine Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.	3 Credits
	GPHY 443 - Cultural & Global Competence Offered intermittently. Prereq., upper-division or graduate standing. Designed to increase awareness of student's own culture and increase cross-cultural sensitivity. Understanding the perspectives of other cultures and resolving possible conflicts. Examination of the role of perception, belief systems, social structures, and culture practices.	3 Credits
	GPHY 515 - Adv Human Geography (R-9) Offered intermittently. Advanced topics in cultural and historical geography, gender issues, migration and population change, economic geography, urban and settlement geography, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Human Environment Interaction

Rule: Must complete at least 1 of the following:

	Course	Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 336 - Exploration & Discovery Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.	3 Credits
	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Capstone

Rule: Seniors must complete the following course

Note: Seniors must enroll in GPHY 400 in fall, attend GPHY 500 in fall, and complete course requirements in spring.

	Course	Credits

	GPHY 400 - Geography Capstone Offered autumn. Prereq.,Senior standing. Exploration of current research, projects, and programs of geographers and scientists/practitioners in allied disciplines and fields, and preparation of a professional portfolio. Student preparation for post-graduate professional and academic careers is emphasized.	1 Credits
Minimum Required Grade: C-		1 Total Credits Required

Upper Division Writing

Rule: Must complete 1 of the following courses

Note: GPHY 335 will also count toward the upper division core requirements
GPHY 499 will also count toward upper division elective credits.
Other science-based writing courses (e.g. GEO 320, GEO 499, BIOO 470, BIOO 475) may be approved by the advisor.

	Course	Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 499 - senior thesis / capstone (R-6) Offered autumn and spring. Senior standing and consent of instructor. Independent research project in any geographical topic supervised by a faculty member, and leading to completion of the baccalaureate degree.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Physical Geography Option Science Electives

Rule: Must complete 1 of the following science categories

6-10 Total Credits Required

Biology

Rule: May complete the following courses

	Course	Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits
	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits

Minimum Required Grade: C-	6 Total Credits Required

Chemistry

Rule: May complete the following courses

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

College Chemistry

Rule: May complete the following courses

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

College Physics

Rule: May complete the following courses

	Course	Credits

	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physics with Calculus

Rule: May complete the following courses

	Course	**Credits**
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits

	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Physical Geography Option Core

Rule: Must complete all of the following courses

Note: One course can be used to satisfy the Upper Division Systematic Geography – Physical Geography. Substitutions which broaden the student's curriculum may be approved by their advisor.

	Course	Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits
Minimum Required Grade: C-		6-9 Total Credits Required

Advanced Math

Rule: Must complete 1 additional math or statistics course in addition to the one chosen for Math Fundamentals. For instance, if M 171 has been taken, M 172 is recommended.

Minimum Required Grade: C-

3-4 Total Credits Required

General Ed Symbolic Systems (Math Fundamentals)

Rule: Must complete 1 of the following courses

Note: Gen Ed credits do not count towards degree credits.

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
	STAT 451 - Statistical Methods I Offered autumn. Prereq., one year of college mathematics including M 115 or equiv. course in probability or consent of instr. May not be counted toward a major in mathematics. Intended primarily for non-mathematics majors who will be analyzing data. Graphical and numerical summaries of data, elementary sampling, designing experiments, probability as a model for random phenomena and as a tool for making statistical inferences, random variables, basic ideas of inference and hypothesis testing. Level: Undergraduate-Graduate	3 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Community and Environmental Planning

Bachelor of Arts - Geography; Community & Environmental Plng Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 43
Required Cumulative GPA: 2.5
Note: An internship is strongly recommended.

Introduction to Geography

Rule: Must complete all of the following courses:

	Course	Credits

	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 112N - Intro to Phys Geography Lab Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385.	1 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Regional Geography Course

Rule: Must complete at least 1 of the following courses

	Course	Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits
	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits
	GPHY 241 - Montana Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.	3 Credits
	GPHY 243X - Africa Offered intermittently. A survey of the biophysical and cultural geography of Sub-Saharan Africa. Emphasis is on the region's cultural-historical development and current ecological, demographic, and economic patterns.	3 Credits
	GPHY 245X - The Middle East Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region.	3 Credits

	GPHY 342 - North America Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are explored.	3 Credits
	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 347 - Regional Geography (Mult Reg) (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.	3 Credits
	GPHY 348 - Field Studies in Geography (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.	3 Credits
	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits
	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	GPHY 445 - Regional Geography Offered intermittently. In-depth treatment of a geographic region, a particular regional problem, or the methodology of regional geography. Topics vary.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Methods

Rule: Must complete all of the following courses
Minimum Required Grade: C-
10 Total Credits Required

Geographic Methods

	Course	Credits

	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Mathematics/Statistics

	Course	Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Upper Division Systematic Geography

Rule: Must complete the following subcategories of courses

9 Total Credits Required

Physical Geography

Rule: Must complete at least 1 of the following courses

	Course	Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits

	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits
	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits
	GPHY 525 - Adv Physical Geography (R-9) Offered intermittently. Advanced topics in climate and global change, paleo-environments and biogeography, landform analysis, soils, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geography and Society

Rule: Must complete at least 1 of the following:

Note: GPHY 323S and 421 count simultaneously toward Upper Division Systematic Geography and CEP electives.

	Course	**Credits**
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits

	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits
	GPHY 434 - Food and Famine Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.	3 Credits
	GPHY 443 - Cultural & Global Competence Offered intermittently. Prereq., upper-division or graduate standing. Designed to increase awareness of student's own culture and increase cross-cultural sensitivity. Understanding the perspectives of other cultures and resolving possible conflicts. Examination of the role of perception, belief systems, social structures, and culture practices.	3 Credits
	GPHY 515 - Adv Human Geography (R-9) Offered intermittently. Advanced topics in cultural and historical geography, gender issues, migration and population change, economic geography, urban and settlement geography, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Human Environment Interaction

Rule: Must complete at least 1 of the following:

Note: GPHY 335 and 432 count simultaneously toward Upper Division Systematic Geography and CEP electives.

	Course	**Credits**
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 336 - Exploration & Discovery Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.	3 Credits

	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Capstone

Rule: Seniors must complete the following course

Note: Seniors must enroll in GPHY 400 in fall, attend GPHY 500 in fall, and complete course requirements in spring.

	Course	Credits
	GPHY 400 - Geography Capstone Offered autumn. Prereq.,Senior standing. Exploration of current research, projects, and programs of geographers and scientists/practitioners in allied disciplines and fields, and preparation of a professional portfolio. Student preparation for post-graduate professional and academic careers is emphasized.	1 Credits
Minimum Required Grade: C-		1 Total Credits Required

Upper Division Writing

Rule: Must complete 1 of the following courses

Note: GPHY 335 or GPHY 433 will also count toward the upper division core requirements

	Course	Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits

	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
	GPHY 499 - senior thesis / capstone (R-6) Offered autumn and spring. Senior standing and consent of instructor. Independent research project in any geographical topic supervised by a faculty member, and leading to completion of the baccalaureate degree.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Community and Environmental Planning Option

Rule: Must complete the following subcategories

13-20 Total Credits Required

Community and Environmental Planning Core

Rule: Must complete both courses

	Course	Credits
	GPHY 465 - Planning Princ & Processes Offered autumn even-numbered years. Prereq., upper-division or graduate standing. Surveys planning principles, practices and issues in urban and rural environments. Attention is devoted to Montana, state planning programs in the United States., and federal programs and policies that influence land-use planning. Emphasizes skills and techniques used in plan development and implementation.	3 Credits
	GPHY 466 - Environmental Planning Offered autumn odd-numbered years. Introduction to practice of environmental planning which includes elements of physical planning, planning design at the landscape scale, and conservation planning. Includes field visits and project-based work.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Community and Environmental Planning Methods

Rule: Must complete at least 1 of the following course/lab combinations

Note: GPHY 468 must be taken together with GPHY 469.
GPHY 486 must be taken together with GPHY 489.

	Course	Credits

	GPHY 468 - Community & Regional Analysis Offered autumn. Coreq., GPHY 469. Socio-demographic analysis of communities and regions: population, employment, and spatial interaction. Hands-on course designed for future planners, GIS analysts, and others interested in socio-demographic change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GPHY 469 - Planning & Analysis Laboratory Offered autumn. Coreq., GPHY 468. Laboratory to accompany GPHY 468.	1 Credits
	GPHY 486 - Transport, Planning & GIS Offered intermittently during wintersession (2 credits) or spring semester (3 credits.) Coreq., GPHY 489. A project-oriented course focusing on patterns and trends in urban passenger transportation, principles of transport planning, and modeling in GIS-T. To succeed in this course students should have comfort with basic algebra and statistics.	3 Credits
	GPHY 489 - Cartography/GIS Laboratory (R-4) Offered autumn and spring. Prereq., or coreq., GPHY 482, 486 or 487. Lab to accompany cartography and GIS courses.	1 Credits
Minimum Required Grade: C-		4 Total Credits Required

Community and Environmental Planning Electives

Rule: Must complete at least 3 courses from the following courses:

Note: If not previously taken to fulfill CEP Methods, the following courses can be selected as electives:
1) GPHY 468/469 Community and Regional Analysis with co-requisite lab - 4 cr
2) GPHY 486/489 Transport, Planning & GIS with co-requisite lab = 4 cr
Other courses can count towards CEP electives.
GPHY 323S and GPHY 421 can be used to satisfy upper division requirements in 'Geography and Society'
GPHY 335 and GPHY 432 can be used to satisfy upper division requirements in 'Human Environment Interaction.'

	Course	**Credits**
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits

	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits
Minimum Required Grade: C-		3-10 Total Credits Required

General Ed Mathematics

Rule: Must complete 1 of the following

Note: Students are encouraged to take M 115. Students who successfully complete M 122 Trigonometry, M 171 Calculus I, or M 172 Calculus II also meet the degree specific Gen Ed Mathematics requirement. Gen Ed credits do not count towards degree credits.

	Course	Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits
	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits

Minimum Required Grade: C-	3 Total Credits Required

Geography Minor

Minor - Geography (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 19
Required Cumulative GPA: 2.0

Introduction to Geography

Rule: Must complete all of the following courses

	Course	Credits
	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 112N - Intro to Phys Geography Lab Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385.	1 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Regional Core

Rule: Must complete at least 1 of the following courses

	Course	Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits

	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits
	GPHY 241 - Montana Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.	3 Credits
	GPHY 243X - Africa Offered intermittently. A survey of the biophysical and cultural geography of Sub-Saharan Africa. Emphasis is on the region's cultural-historical development and current ecological, demographic, and economic patterns.	3 Credits
	GPHY 245X - The Middle East Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region.	3 Credits
	GPHY 342 - North America Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are explored.	3 Credits
	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 347 - Regional Geography (Mult Reg) (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.	3 Credits
	GPHY 348 - Field Studies in Geography (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.	3 Credits
	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits

	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	GPHY 445 - Regional Geography Offered intermittently. In-depth treatment of a geographic region, a particular regional problem, or the methodology of regional geography. Topics vary.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geographic Methods

Rule: Must complete 1 of the following courses

	Course	Credits
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Systematic Geography

Rule: Must complete at least 1 course from 2 subcategories: 'Physical Geography', 'Geography and Society', and 'Human-Environment Interaction'

6 Total Credits Required

Physical Geography

Rule: May complete 1 of the following courses

	Course	Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits

	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits
	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits
	GPHY 525 - Adv Physical Geography (R-9) Offered intermittently. Advanced topics in climate and global change, paleo-environments and biogeography, landform analysis, soils, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geography and Society

Rule: May complete 1 of the following courses

	Course	Credits
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits

	GPHY 434 - Food and Famine Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.	3 Credits
	GPHY 443 - Cultural & Global Competence Offered intermittently. Prereq., upper-division or graduate standing. Designed to increase awareness of student's own culture and increase cross-cultural sensitivity. Understanding the perspectives of other cultures and resolving possible conflicts. Examination of the role of perception, belief systems, social structures, and culture practices.	3 Credits
	GPHY 515 - Adv Human Geography (R-9) Offered intermittently. Advanced topics in cultural and historical geography, gender issues, migration and population change, economic geography, urban and settlement geography, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Human Environment Interaction

Rule: May complete 1 of the following courses

	Course	Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 336 - Exploration & Discovery Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.	3 Credits
	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits

	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Mountain Studies Minor

Mountain Studies is an interdisciplinary field of study focusing on the physical and human dimensions of mountain environments. Coursework in the minor emphasizes physical geography and mountain-society interactions, including a critical analysis of the processes of change and influence shaping local and regional mountain environments today. The minor in Mountain Studies takes advantage of existing faculty expertise and an array of courses to provide students with a science-based curriculum and global perspective. Students pursuing the minor in mountain studies will develop knowledge and skills appropriate for graduate study and for working with government and non-government agencies and groups.

Minor - Mountain Studies (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 18

Required Cumulative GPA: 2.5

Note: In addition to completing the requirements for a major in any discipline, students electing the minor in Mountain Studies must have a GPA of 3.0 in the major and complete a minimum of 18 additional credits in this minor.

Upper Division Core

Rule: Must complete all of the following courses

	Course	**Credits**
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits

Minimum Required Grade: C-	6 Total Credits Required

Region-Specific Mountain Studies

Rule: Must complete 6 credits from the following courses

Note: Two sections of NRSM 391 may be taken to fulfill this requirements, each for 3 credits:
1) Community and Conservation in the Northern Rockies
2) Ecological Restoration in Greater Yellowstone

	Course	Credits
	BIOL 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOL 459 - Alpine Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Distribution, abundance and life cycles of plants and animals and their unique ecophysiological adaptations to life in the rigorous environments of the high mountains above the timberline, with emphasis on the Crown of the Continent area.	3 Credits
	BIOO 101N - Survey MT Wldlife & Habitats Offered online autumn. Prereq., one course in biology. Interpreting biological patterns associated with selected Montana wildlife species, including mammals, birds, reptiles and amphibians.	3 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	GEO 231 - Geosciences Field Methods Offered autumn and spring. Prereq. GEO 101N-102N. This course introduces students to a variety of field methodologies routinely used in the collection, processing, and interpretation of geoscientific field data.	2 Credits
	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits

	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 391 - Special Topics (R-12) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 12 Credits
	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits
	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits
	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	NRSM 352 - Mountain Environment and Dev Offered summer only. Coreq., PTRM 353. This course covers the contentious issues surrounding environment and development in the Himalaya using the Garhwal region of India as the example.	3 Credits
	NRSM 391 - Special Topics (R 12) Offered intermittently. Experimental offerings of visiting professors; new courses or one time offerings of current topics.	0 To 12 Credits
	PTRM 353 - Tourism & Sustnbility Himalaya Offered summer only. Coreq. NRSM 352. In this course we will explore the opportunities and challenges of development with particular reference to nature-based tourism and sustainability in an isolated but rapidly globalizing region of the Himalaya. Students will learn through extensive readings, class discussions, direct field experience (including living in a remote mountain village), meetings with development officials, sustainability activists and stakeholders in the region.	3 Credits
	PTRM 418 - Winter Wilderness Field Stdies Examination of wilderness values, management issues and strategies, winter ecology and snow science, risk management and group leadership, and traditional skills. Winter field course in the Swan Valley and Mission Mountains Wilderness. Offered wintersession.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

General Mountain Studies

Rule: Must complete 6 credits from the following courses

Note: One section of NRSM 311 fulfills this requirement: Conservation Biology in the Northern Rockies

	Course	Credits
	BIOL 451 - Landscape Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOL 342 or BIOE 370/371. Biophysical processes that determine landscape and ecosystem structure and function using remote sensing tools, geographic information systems and dynamic models to demonstrate landscape change.	3 Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	GEO 391 - Special Topics (R–9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one–time offerings of current topics.	1 To 9 Credits
	GEO 433 - Global Tectonics Offered autumn. Prereq., GEO 315, M 162, and 2.25 or better overall GPA in geosciences courses. Geodynamics and tectonics of the Earth and other planets. Course material includes methods of observing tectonic processes and tectonic phenomena, both at the surface and in the deep earth, over a wide range of time scales.	3 Credits
	GEO 488 - Snow, Ice and Climate Offered spring. Prereq., M 121. Study of basic physical processes occurring in snow and ice, and how these processes govern the interaction between frozen water and the climate system. The first half of the course focuses in snow, with special attention to snow formation in the atmosphere, snow metamorphism, water flow through snow, and basic avalanche mechanics. The second half of the course focuses on ice and includes glacier and ice sheet flow dynamics, glacier hydrology, and ice age theory. Graduate students will be required to complete additional problem sets requiring higher level math; perform additional reading assignments; perform at a higher level on assignments and exams where students are asked to outline and describe various physical processes; submit a well researched and reference research proposal that is able to synthesize previous research and provide a sophisticated research plan.	3 Credits

	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	NASX 351 - Traditional Eco Knowledge ?Offered summer. This course is one unit of the four unit (12 credit) summer semester program: "Wild Rockies Summer Semester." Description: This course will explore the traditional ecological perspectives of the Salish, Kootenai, Blackfeet and Tlingit people, as well as how these perspectives relate to Western concepts of ecology. Through field-based activities, lectures by tribal elders, and personal exploration, students will come to a heightened understanding of the still vital cultural perspectives and practices of modern American Indians, particularly in the Rockies of Montana and Canada.	3 Credits
	NRSM 311 - Field Stds ecol/Human Commun (R-12) Offered every term. Prereq., consent of instr. Via extended backcountry travel, experiential examination of the structure and function of the ecosystems occurring within the course area. Also investigates the relationship of those ecosystems with the people that manage, live, and work in the area. Offered by the Wild Rockies Field Institute.	2 To 3 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Teaching Geography

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

Students who want to be licensed to teach geography at the middle and high school level must complete the B.A. degree requirements in geography (general geography, no option required). They also must complete a teaching major or minor in a second field of their choice and the professional licensure program in the College of Education. Students may also earn a teaching minor in geography. See the Department of Curriculum & Instruction for information about admission to the Teacher Education Program and completion of the licensure program.

To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a major/minor form for graduation or the major/minor/concentration section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Tracks will not appear on your UM transcript, diploma, university lists, student data system, or university publication and are used for advising purposes only. You do not fill out a major change for a track.

Bachelor of Arts - Geography; Track: Teaching Geography

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 39

Required Cumulative GPA: 2.0

Introduction to Geography

Rule: Must complete all of the following courses:

	Course	Credits
	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 112N - Intro to Phys Geography Lab Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385.	1 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Regional Geography Course

Rule: Must complete at least 1 of the following courses

Note: GPHY 141 Geography of World Regions is highly recommended for Geography teaching majors.

	Course	Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits

	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits
	GPHY 241 - Montana Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.	3 Credits
	GPHY 243X - Africa Offered intermittently. A survey of the biophysical and cultural geography of Sub-Saharan Africa. Emphasis is on the region's cultural-historical development and current ecological, demographic, and economic patterns.	3 Credits
	GPHY 245X - The Middle East Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region.	3 Credits
	GPHY 342 - North America Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are explored.	3 Credits
	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 347 - Regional Geography (Mult Reg) (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.	3 Credits
	GPHY 348 - Field Studies in Geography (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.	3 Credits
	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits

	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	GPHY 445 - Regional Geography Offered intermittently. In-depth treatment of a geographic region, a particular regional problem, or the methodology of regional geography. Topics vary.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geographic Methods

Rule: Must complete all of the following subcategories
Minimum Required Grade: C-
5-6 Total Credits Required

GIS

Rule: Must complete the following course

	Course	Credits
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Field Techniques/Workshop

Rule: Must complete 1 of the following courses

Note: GPHY 284 and 385 are offered at least once per year. GPHY 497 is offered intermittently in summer.

	Course	Credits
	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
	GPHY 497 - Workshop in Teaching Geography Offered intermittently. Concepts and techniques in geography, with emphasis on their use in teaching geography in Montana schools. Students are required to prepare and present a teaching unit project. Designed for pre-service or in-service teachers.	2 To 3 Credits

Minimum Required Grade: C-	2-3 Total Credits Required

Upper Division Systematic Geography

Rule: Must complete the following subcategories of courses

9 Total Credits Required

Physical Geography

Rule: Must complete at least 1 of the following courses

	Course	Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits
	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits
	GPHY 525 - Adv Physical Geography (R-9) Offered intermittently. Advanced topics in climate and global change, paleo-environments and biogeography, landform analysis, soils, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Geography and Society

Rule: Must complete at least 1 of the following:

	Course	Credits
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits
	GPHY 434 - Food and Famine Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.	3 Credits
	GPHY 443 - Cultural & Global Competence Offered intermittently. Prereq., upper-division or graduate standing. Designed to increase awareness of student's own culture and increase cross-cultural sensitivity. Understanding the perspectives of other cultures and resolving possible conflicts. Examination of the role of perception, belief systems, social structures, and culture practices.	3 Credits
	GPHY 515 - Adv Human Geography (R-9) Offered intermittently. Advanced topics in cultural and historical geography, gender issues, migration and population change, economic geography, urban and settlement geography, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Human Environment Interaction

Rule: Must complete at least 1 of the following:

	Course	Credits

	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 336 - Exploration & Discovery Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.	3 Credits
	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Writing

Rule: Must complete 1 of the following courses

Note: GPHY 335 or GPHY 433 will also count toward the upper division core requirements. GPHY 499 will also count toward upper-division electives.

	Course	**Credits**
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits

	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
	GPHY 499 - senior thesis / capstone (R-6) Offered autumn and spring. Senior standing and consent of instructor. Independent research project in any geographical topic supervised by a faculty member, and leading to completion of the baccalaureate degree.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Degree Electives

Rule: Must complete sufficient credits of GPHY electives to fulfill the 39 degree credit total

Note: Students must fulfill the degree credit total of 39 credits plus the university requirement for 39 upper division credits.
EDU 497 Methods: 5-12 Social Studies' counts toward degree credit totals.

Minimum Required Grade: C-

Teaching Licensure Requirements

Note: Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A major GPA of 2.75 is required to be eligible for student teaching. This major does not qualify as a single field endorsement. Individuals must complete a second teaching major or minor in another content area.

Teaching Track

Rule: Must complete the following course

Note: The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Methods: 5-12 Social Studies.

	Course	**Credits**

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits
Minimum Required Grade: C-		3 Total Credits Required

General Ed Mathematics

Rule: Must complete 1 of the following

Note: Students are encouraged to take M 115. Students who successfully complete M 122 Trigonometry, M 171 Calculus I, or M 172 Calculus II also meet the degree specific Gen Ed Mathematics requirement. Gen Ed credits do not count towards degree credits.

	Course	Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits
	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		3 Total Credits Required

General Ed Symbolic Systems

Rule: Must complete either 1 year of a foreign language or STAT 216 Introduction to Statistics

Note: Gen Ed credits do not count towards degree credits.

Minimum Required Grade: C-

3-10 Total Credits Required

Teaching Geography Minor

A teaching minor is an academic minor which may contain different course requirements designed to meet state standards. Those interested in teaching in K-12 schools must complete a teaching major in a content area plus the teacher preparation program through the Department of Curriculum and Instruction. Additional teaching areas can be added through completion of either a teaching major or a teaching minor in that content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

The term 'minor' for this teaching option refers to courses that need to be completed. To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a minor form for graduation or the minor section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Minor - Geography (Minor); Track: Teaching Geography

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 22
Required Cumulative GPA: 2.0

Introduction to Geography

Rule: Must complete all of the following courses

	Course	Credits
	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 112N - Intro to Phys Geography Lab Offered autumn and spring. Prereq. or coreq., GPHY 111N. Introduction to concepts and techniques needed to understand and analyze the information contained in various types of maps, graphs, aerial photos, imagery, and other graphics and geographic data sets. This is prerequisite to GPHY 385.	1 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Regional Core

Rule: Must complete at least 1 of the following courses

	Course	Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits

	GPHY 144 - Montana's Mountains Consent of Instructor. A field-based course offered during winter session in the winter splendor of the North Fork of the Flathead River and Glacier National Park. Topics addressed include physical geography, geology, winter ecology, national park management, environmental history, and the changing economy of the region.	3 Credits
	GPHY 241 - Montana Offered autumn. The physical, cultural, economic, political, and historical geography of the state including Montana's mountains and the prairies.	3 Credits
	GPHY 243X - Africa Offered intermittently. A survey of the biophysical and cultural geography of Sub-Saharan Africa. Emphasis is on the region's cultural-historical development and current ecological, demographic, and economic patterns.	3 Credits
	GPHY 245X - The Middle East Offered intermittently. A survey of the biophysical and cultural geography of Southwest Asia and North Africa. Emphasis on environmental change; prehistory; patterns of cultural and historical change; issues of socio-economic, religious, and political diversity; and the broader political significance of the region.	3 Credits
	GPHY 342 - North America Offered intermittently. Physiographic regions of North America; highlights of historical geography blended with physical and cultural aspects of the continent. Lesser known places are explored.	3 Credits
	GPHY 344 - Crown of the Continent Offered autumn. The study of the geographical setting of the Crown of the Continent of North America, including the richness of physical geography, history, culture, and models of conservation. Examines ongoing research initiatives, impacts of climate change, regional transformations, and the relationship between people and this mountainous environment.	3 Credits
	GPHY 347 - Regional Geography (Mult Reg) (R-9) Offered intermittently. Selected regions will be listed as appropriate in each Class Schedule.	3 Credits
	GPHY 348 - Field Studies in Geography (R-12) Offered autumn and spring. Through extended backcountry travel, experiential examination of regional landforms, climate, hydrology, soils, and patterns of vegetation and wildlife. Local landscapes, natural-resource endowment, and societies with particular emphasis on human-environmental interaction. Geographical skills and techniques, including map reading and navigational skills. Offered by the Wild Rockies Field Institute as part of a semester-long, 12-credit field experience with corequisite courses in allied fields.	3 Credits
	GPHY 442 - Regionalism & Rocky Mtn West Offered intermittently. Investigation of regionalism as a concept and its future in the Rocky Mountain West. Regionalism as a geographical, economic, political, and cultural entity.	3 Credits

	GPHY 444 - High Asia Offered intermittently. A study of the geography and mountain-society interactions in High Asia. The course includes attention to the theory and methodology of mountain geography, with attention to physical and human systems and their interaction.	3 Credits
	GPHY 445 - Regional Geography Offered intermittently. In-depth treatment of a geographic region, a particular regional problem, or the methodology of regional geography. Topics vary.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geographic Methods

Rule: Must complete 1 of the following courses

	Course	Credits
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Systematic Geography

Rule: Must complete at least 1 course from 2 subcategories: 'Physical Geography', 'Geography and Society', and 'Human-Environment Interaction'

6 Total Credits Required

Physical Geography

Rule: May complete 1 of the following courses

	Course	Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits

	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 314 - Global Mountain Environments Offered autumn odd-numbered years. The study of mountain environments and their physical processes around the globe: Andes, Appalachians, East African Mountains, European Alps, Hindu Kush-Himalaya-Karakoram, Pamir, Rocky Mountains, Southern Alps of New Zealand, Tien Shan, and others. Topics include mountain building, alpine glaciers, mountain geomorphology and climatology, mountain watersheds, mountain biogeography, and mountain hazards such as earthquakes and mass movements.	3 Credits
	GPHY 317 - Geomorphology Offered autumn even-numbered years. Prereq., GPHY 111N or GEO 101N. Important landforms and landscapes, their biophysical processes, and their formative elements.	3 Credits
	GPHY 438 - Mountain Field Study (R-6) Upper-division or graduate standing and consent of instructor. Examination of aspects of the study of mountain geography through a two-week field course based in a mountainous country and/or region. Possible areas of focus include, but are not limited to, the Northern Rocky Mountains, the Alps, the Himalaya, and the Andes.	3 Credits
	GPHY 525 - Adv Physical Geography (R-9) Offered intermittently. Advanced topics in climate and global change, paleo-environments and biogeography, landform analysis, soils, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Geography and Society

Rule: May complete 1 of the following courses

	Course	Credits
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits

	GPHY 434 - Food and Famine Offered intermittently. Exploration of the production, distribution, and consumption of food; the causes and consequences of hunger; and measures that might be taken to relieve hunger.	3 Credits
	GPHY 443 - Cultural & Global Competence Offered intermittently. Prereq., upper-division or graduate standing. Designed to increase awareness of student's own culture and increase cross-cultural sensitivity. Understanding the perspectives of other cultures and resolving possible conflicts. Examination of the role of perception, belief systems, social structures, and culture practices.	3 Credits
	GPHY 515 - Adv Human Geography (R-9) Offered intermittently. Advanced topics in cultural and historical geography, gender issues, migration and population change, economic geography, urban and settlement geography, and other selected topics. Topic titles will appear in the Class Schedule. Level: Graduate	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Human Environment Interaction

Rule: May complete 1 of the following courses

	Course	Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	GPHY 336 - Exploration & Discovery Offered intermittently. Emphasis on the evidence of language, genetics, material culture, and transoceanic plant and animal exchanges in assessing mobility and population distributions in prehistory; factors that motivate exploration; the history of navigation; the impacts of exploration upon science, society, economics, and government.	3 Credits
	GPHY 338 - Mountains and Society Offered spring. Physical and cultural aspects of the mountains of North and South America, Europe, Africa, and Asia. Emphasis on combining the physical landscape with an overview of the indigenous people who inhabit the worlds' heights.	3 Credits
	GPHY 432 - Human Role Environ Change Offered intermittently. A systematic examination of the ways in which the major physical systems and ecosystems of the earth have been modified by human activity, and approaches to the rehabilitation of these systems.	3 Credits

	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Teaching Licensure Requirements

Note: Individuals completing a teaching minor must also complete a teaching major in another content area. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A minor GPA of 2.75 is required to be eligible for student teaching.

Note: Individuals completing a teaching minor must also complete a teaching major in another content area. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A minor GPA of 2.75 is required to be eligible for student teaching.

Teaching Methods Course

Rule: Complete the following course.

Note: The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Methods: 5-12 Social Studies.

	Course	Credits

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Certificate in GIS Sciences and Technologies

The Certificate in GIS Sciences and Technologies, jointly offered by the departments of Geography and Forest Management, is aimed at present or future professionals or scientists who require skills in GIS technologies. The purpose of this program is to provide undergraduate students or individuals possessing an undergraduate degree with the training, knowledge, and understanding necessary to acquire, process, analyze, and properly display digital geographic data.

Special Requirements for the Certificate

To earn a certificate in GIS Sciences and Technologies, students must either complete or have completed an undergraduate degree and complete a minimum of 20 semester credit hours of course work, including 9 to 11 required credits and 9 to 11 elective credits as described below. Students must achieve at least an overall grade point average of 3.0 for courses within the program in order to earn a certificate. The certificate will be awarded upon the successful completion of all of the requirements of the certificate and the undergraduate degree.

Certificate of Art - Geographic Information Systems

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 20

Required Cumulative GPA: 3.0

Required GIS Core Courses

Rule: Must complete 1 from each of the following subcategories

Minimum Required Grade: C-

9-11 Total Credits Required

Introduction to GIS

Rule: Must complete 1 and only 1 of the following courses

Note: Prior to Fall 2013, this was fulfilled by FOR 250 & 350 or GPHY 381 & 382. In 2013 this requirement could be fulfilled with FORS 284.

	Course	Credits
	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	GPHY 284 - Intro to GIS and Cartography Offered every term. Basic computer competency required. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process. Students need to register for a required lab section.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Photogrammetry/Remote Sensing

Rule: Must complete 3-4 credits of the following courses

Note: GPHY 487 and 489 should be completed together.

	Course	Credits
	FORS 351 - Env Remote Sensing Offered spring. The theory and application of photo- and electro-optical remote sensing for mapping resources and developing information systems.	3 Credits
	GPHY 487 - Remote Sensing/Raster GIS Offered autumn. Prereq. or coreq., GPHY 284 or FORS 250 or Consent of Instructor. Coreq., GPHY 489. Basic principles of remote sensing and analyzing images within a raster GIS. Review current data sources.	3 Credits
	GPHY 489 - Cartography/GIS Laboratory (R-4) Offered autumn and spring. Prereq., or coreq., GPHY 482, 486 or 487. Lab to accompany cartography and GIS courses.	1 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Additional Required Courses

Rule: Must complete 3-4 credits of the following courses

Note: GPHY 488 and 489 should be completed together. Spring 2014 and 2015, GPHY 488 and 489 are fulfilled by GPHY 491 GIS Applications.

	Course	Credits
	FORS 350 - Forestry Apps of GIS Offered spring. Prereq., FORS 250 or FORS 284 or GPHY 284. Introduction to the basic concepts and techniques of computerized spatial data management and analysis systems and application to natural resource management.	3 Credits
	GPHY 488 - Thematic Cartography & GIS Offered spring. Prereq., GPHY 284 or GPHY 381 or FORS 250 or Consent of Instructor. Application of GIS for managing natural and cultural resources. Covers choropleth maps, dot maps, proportional figure maps, isarithmic maps, and others. Includes computer mapping and GIS exercises. Students need to register for a required linked lab section.	3 Credits
	GPHY 489 - Cartography/GIS Laboratory (R-4) Offered autumn and spring. Prereq., or coreq., GPHY 482, 486 or 487. Lab to accompany cartography and GIS courses.	1 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Advanced Elective Courses

Rule: Must complete 9-11 credits of the following subcategories

Note: Students can choose electives from any subcategory/ies.

Minimum Required Grade: C-

9-11 Total Credits Required

Raster GIS, Remote Sensing, and Image Analysis

Rule: May complete 4-8 credits from the following courses

Note: GPHY 587 and 489 should be completed together.

	Course	Credits
	FORS 551 - Digital Image Processing Offered intermittently. Prereq., FORS 351 or consent of instr. Fundamentals of electro-optical digital remote sensors, data compilation, preprocessing, and pattern recognition. Level: Graduate	4 Credits
	GPHY 587 - Image Analysis & Modeling Offered every two years. Prereq., GPHY 487 or FORS 351 or Consent of instructor; coreq., GPHY 589. Advanced topics in image analysis (e.g. hyperspectral images and pattern-recognition-based classification) and foundations of simple raster-based models. Level: Graduate	3 Credits
	GPHY 589 - Cartography/GIS Laboratory (R-4) Offered autumn and spring. Laboratory to accompany GPHY 587 or 588. Level: Graduate	1 Credits
Minimum Required Grade: C-		4-8 Total Credits Required

Vector GIS and Networks

Rule: May complete 3-11 credits of the following courses

Note: GPHY 486 and 489 should be completed together. GPHY 588 and 589 should be completed together.

	Course	Credits
	GPHY 486 - Transport, Planning & GIS Offered intermittently during wintersession (2 credits) or spring semester (3 credits.) Coreq., GPHY 489. A project-oriented course focusing on patterns and trends in urban passenger transportation, principles of transport planning, and modeling in GIS-T. To succeed in this course students should have comfort with basic algebra and statistics.	3 Credits
	GPHY 489 - Cartography/GIS Laboratory (R-4) Offered autumn and spring. Prereq., or coreq., GPHY 482, 486 or 487. Lab to accompany cartography and GIS courses.	1 Credits
	GPHY 580 - Seminar GIS & Cartography (R-9) Offered every two years. Seminar topics in cartography and GIS. Applications to advanced studies in human and physical geography. Level: Graduate	3 Credits

	GPHY 588 - Vector GIS Offered autumn. Coreq., GPHY 589. Theoretical/conceptual and practical aspects of entity-based GIS modeling and spatial analysis. Point pattern analysis (i.e. cluster detection, density analysis, kriging), network analysis (i.e. network construction, network-based spatial statistics, accessibility modeling), and areal pattern analysis (i.e. spatial autocorrelative pattern, spatial regression modeling). Applications in urban and environmental planning, transportation, natural resource management, ecology, health, criminology, engineering, and business. To succeed in this course students should have familiarity with GIS. Level: Graduate	3 Credits
	GPHY 589 - Cartography/GIS Laboratory (R-4) Offered autumn and spring. Laboratory to accompany GPHY 587 or 588. Level: Graduate	1 Credits
Minimum Required Grade: C-		3-11 Total Credits Required

Data Management and Programming

Rule: May complete 3-10 credits of the following courses

Note: GPHY 468 and 469 should be completed together.

	Course	**Credits**
	CSCI 250 - Computer Mdlng/Science Majors Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.	3 Credits
	FORS 505 - Sampling Methods Offered spring. Prereq., consent of instr. Fundamentals of statistical sampling emphasizing natural and environmental resource applications. Principles of inferences and alternative estimators are studied in the context of simple random, systematic, unequal probability, stratified, and 3P/Poisson designs. Variable radius plot sampling, line intersect sampling, and other probability proportional to size designs used in forest and ecological inventories are also covered. Level: Graduate	3 Credits
	GPHY 468 - Community & Regional Analysis Offered autumn. Coreq., GPHY 469. Socio-demographic analysis of communities and regions: population, employment, and spatial interaction. Hands-on course designed for future planners, GIS analysts, and others interested in socio-demographic change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GPHY 469 - Planning & Analysis Laboratory Offered autumn. Coreq., GPHY 468. Laboratory to accompany GPHY 468.	1 Credits

Minimum Required Grade: C-	3-10 Total Credits Required

GIS Applications

Rule: May complete 3-11 credits of the following courses

Note: GPHY 482 and 489 should be completed together.

	Course	Credits
	ANTY 452 - GIS in Archaeology Offered intermittently. Prereq., ANTY 250s. Anthropological and archaeological data acquisition, management, and analysis using Geographic Information Systems (GIS) tools and techniques.	3 Credits
	FORS 503 - GIS:Meth & Applic I Offered intermittently. Prereq., consent of instr. Introduction to the theory and development of statistical gradient and predictive distribution models in the resource and conservation sciences. Course will develop climatic, edaphic, biophysical, and inventory data sources for use in predictive distribution modeling. Survey of multiple modeling approaches, limitations and assumptions, and applications in the resource and conservation fields. Emphasis on the integration of GIS and raster analysis methods with spatial and non-spatial statistical techniques. Level: Graduate	3 Credits
	GPHY 385 - Field Techniques Offered autumn and intermittently in spring. Prereq., GPHY 112N or Consent of Instructor. Field techniques used by geographers and planners in making field observations and in collecting data.	3 Credits
	GPHY 481 - Advanced Cartographic Design Offered autumn. Prereq., GPHY 284 or FORS 250 or Consent of Instructor. The course concentrates on the presentation of spatial data and the construction of cartographic products that have clear communication and excellent aesthetic design. The class meets the University's service learning course objectives through a semester long project where students consult with a client, design and construct a map, and deliver a final product.	3 Credits
	GPHY 482 - Spatial Analysis & GIS Offered intermittently. Prereq., GPHY 284 or Consent of Instructor. Coreq., GPHY 489. Quantitative analysis of spatial data, including techniques for pattern analysis, classification, and interpolation within a GIS environment.	3 Credits
	GPHY 489 - Cartography/GIS Laboratory (R-4) Offered autumn and spring. Prereq., or coreq., GPHY 482, 486 or 487. Lab to accompany cartography and GIS courses.	1 Credits
	GPHY 564 - Planning Design Offered spring even-numbered years. Prereq., graduate standing or Consent of Instructor. Analysis of land-use problems and design. Level: Graduate	3 Credits
	WILD 562 - Wildlife Habitat Modeling Offered spring, odd years. Prereq., consent of instr. A survey of theory and applications in the study of resource selection by animals. Level: Graduate	3 Credits

Minimum Required Grade: C-	3-11 Total Credits Required

Environmental Studies

Len Broberg, Interim Director

The Environmental Studies Program (EVST) seeks to provide students with the literacy, skills and commitment needed to foster a healthy natural environment and to create a more sustainable, equitable, and peaceful world. To these ends, the EVST program educates and challenges students to become knowledgeable, motivated, and engaged in environmental affairs. Our students acquire the skills and awareness to promote positive social change and improve the environment and communities of Montana and the world, for current and future generations. Our program is organized upon the following principles:

- Environmental studies require an interdisciplinary approach that integrates the natural sciences, social sciences, and humanities.
- Creating solutions to environmental problems requires enterprise and performance as well as reflection; therefore, an effective environmental education generates thinkers who can do as well as doers who can think.
- It is important to provide both classroom and experiential learning opportunities in the arts and responsibilities of democratic citizenship, including communication, collaboration, and committed civic participation.
- Students should be co-creators of their educational experience.

High School Preparation: Students in high school who are planning to major in environmental studies should take their school's college preparatory curriculum. Courses in biology, chemistry, math through pre-calculus, and writing are recommended.

Department Faculty

Professor

Len Broberg, Professor, EVST Program Director
Phil Condon, Professor
Neva Hassanein, Professor
Vicki Watson, Professor

Associate Professor

Fletcher Brown, Associate Professor
Robin Saha, Associate Professor
Dan Spencer, Professor

Assistant Professor

Rosalyn La Pier, Assistant Professor

Adjunct

Theresa Duncan, Adjunct Instructor
Anthony Mandala
Melissa Mylchreest, Adjunct Professor
Stephanie Potts
Ethan Smith
Emily Withnall, Adjunct Professor

Lecturer

Josh Slotnick, PEAS Farm Director, Lecturer

Emeritus

Tom Roy, Professor Emeritus

Environmental Sciences

Back to Top

- ENSC 105N - Environmental Science

  Credits: 3. Offered autumn. Provides students with opportunities to use class knowledge to make a difference; helps students build all of the following: scientific literacy; skills in critical thinking, research and self-instruction; an understanding of the scientific basis of environmental issues, policies and laws; habits of sustainable living, scientifically-informed, active participation in social decisions, and service to their community and to the earth. Course Attributes: Natural Science Course (N)

- ENSC 291 - Special Topics/Experimental Courses

  Credits: 1 TO 6. (R-6) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, new courses, or one-time offerings of current topics.

- ENSC 360 - Applied Ecology

  Credits: 3. Offered autumn. Prereq or coreq ENST 201. To succeed in this course, students also need college level courses in general biology, chemistry & statistics. Principles and concepts of ecology and how they can be applied to inform real life decisions about human interactions with the environment. Emphasizes the science of sustainability and the conservation of watersheds and biodiversity.

- ENSC 391 - Special Topics/Exp. Courses

  Credits: 1 TO 9. (R 12) Offerered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, new courses, or one time offerings of current topics.

- ENSC 398 - Cooperative Education/Intern

  Credits: 1 TO 6. Offered autumn and spring. Requires consent of instructor. Practical application of classroom learning through internship with governments, organizations or industry. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.

- ENSC 491 - Special Topics/Exper Courses

  Credits: 1 TO 9. (R-9) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, new courses, or one time offerings of current topics.

- ENSC 492 - Independent Study

  Credits: 1 TO 6. (R-6) Offered autumn and spring. Requires consent of instructor. Course material appropriate to the needs and objectives of the individual student.

- ENSC 494 - Seminar/Workshop

  Credits: 1 TO 3. (R-6) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. A seminar on a current environmental topic.

- ENSC 495 - Field Study

  Credits: 1 TO 10. Offered autumn. Prereq or coreq ENSC 360. Designing, executing, interpreting and documenting field studies. Project oriented.

- ENSC 501 - Sci Apprchs Environ Prob

  Credits: 3. Offered autumn. Prereq., graduate standing in EVST or consent of instructor. The strength and limitations of the scientific approach to investigating and solving selected environmental problems with an emphasis on the natural sciences. Level: Graduate

- ENSC 540 - Watershed Conservation

  Credits: 3. Offered autumn. Prereq., graduate standing or consent of instructor. Course assumes students have level of knowledge presented in a college level ecology course. Integrates watershed science, policy, planning, action and organizing. The science component explores watershed connections, evaluating change and assessing watershed condition. The policy component explains the scientific basis of national, state and local laws, programs and agencies that affect watersheds. The planning and action component discusses developing watershed

conservation plans and selecting actions likely to address problems without creating other problems. The organizing component covers how to help watershed communities make choices, resolve conflicts, build commitment and find funding. Students work individually or in teams to assist Montana groups in developing watershed CPR plans, initiating monitoring projects, and/or conducting education projects. Level: Graduate

- ENSC 550 - Pollution Ecology

  Credits: 3. Offered spring even-numbered years. Prereq., graduate standing or consent of instructor. Course assumes students have level of knowledge presented in a college level ecology course. Examines sources, fate, and effects of pollutants on organisms and ecosystems; methods of measuring and predicting pollutant fate and effects, assessing and reducing risks, estimating ecosystem assimilation capacity; setting standards and restoring ecosystems damaged by pollution. Briefly examines some relevant laws and policies at the federal, state and local level. Level: Graduate

- ENSC 551 - Environmental Field Study

  Credits: 1 TO 3. (R-3) Offered intermittently. Prereq. or coreq., ENSC 540 or 550 or ENST 560 or consent of instructor. Same as BIOB 551. Designing, executing and interpreting environmental field studies. Oriented to studies of aquatic systems and watersheds. Students will assist with a class project and may also pursue their own projects. Projects focus on the Clark Fork, Bitterroot and Blackfoot River basins. Level: Graduate

- ENSC 593 - Professional Paper

  Credits: 1 TO 6. (R-6) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Preparation of a professional paper appropriate to the needs and objectives of the individual student. Level: Graduate

- ENSC 594 - Graduate Seminar

  Credits: 1 TO 15. (R-15) Offered autumn and spring. Prereq., graduate standing. May be restricted to EVST majors. May require consent of instructor. In depth analysis of a current environmental topic. Different topics offered each semester. Level: Graduate

- ENSC 595 - Special Topics

  Credits: 1 TO 9. (R-9) Offered autumn and spring. Prereq., graduate standing. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics. Level: Graduate

- ENSC 596 - Independent Study

  Credits: 1 TO 12. (R-12) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Work on selected problems by individual students under direct faculty supervision. Level: Graduate

- ENSC 597 - Research

  Credits: 1 TO 12. (R-12) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Directed individual graduate research and study appropriate to background and objectives of the student. Level: Graduate

- ENSC 598 - Internship

  Credits: 1 TO 8. (R-8) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Practical application of classroom learning during placements off campus. Level: Graduate

- ENSC 599 - Thesis

  Credits: 1 TO 6. (R-6) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Preparation of a thesis or manuscript based on research for presentation and/or publication. Level: Graduate

Environmental Studies

Back to Top

- ENST 191 - Special Topics

  Credits: 1 TO 9. (R 9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one time offerings of current topics.

- ENST 201 - Environmental Info Resources

Credits: 3. Offered autumn and spring. Students learn how to find, evaluate and use existing information to increase understanding of environmental issues and resolve controversies. Students will research a subject using a variety of sources (refereed literature, government sources, internet sources, interviews); evaluate sources critically; write a literature review and give an oral presentation on their topic. Focus is on critical thinking and dealing with the information explosion. Course Attributes: Writing Course-Intermediate

- ENST 225 - Community & Environment

  Credits: 3. Offered autumn. Same as SOCI 225. Exploration of the ways that communities address their environmental concerns. Introduction of relevant social science concepts.

- ENST 230H - Nature and Society

  Credits: 3. UM campus course offered spring. Explores the relationship between ideas about nature and the development of political and social ideas, institutions, and practices, primarily in western (Euro-American) society. Complements ethics offerings in philosophy aimed at environmental studies majors. Course Attributes: Hist & Cultural Studies (H)

- ENST 291 - Spec Topics/Exp Courses

  Credits: 1 TO 9. (R-9) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics.

- ENST 294 - Seminar

  Credits: 1 TO 6. (R-6) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. A review and discussion of current research. Topics vary.

- ENST 310 - Environment Montana: A to Z

  Credits: 3. The environment of Montana has changed dramatically since its founding 150 years ago. The purpose of this course is to provide an introduction to the land, people and places of Montana as viewed through the lens of environmental change. It will explore environmental change in relation to the actions of human beings. It will also explore how federal policies intersect with Montana environmental stories. Through a combination of lectures, readings, focused in-class discussions, and a research project students will learn the environmental stories of Montana.

- ENST 335L - The Environmental Vision

  Credits: 3. Offered autumn. Provides background, overview, interpretations, and understanding of key concepts, themes, approaches, and forms in American nature and environmental nonfiction as well as that literature's response to and influence on environmental events, figures, and movements. Course Attributes: Lit & Artistic Studies (L) Writing Course-Advanced

- ENST 367 - Envr Politics & Policies

  Credits: 3. Offered autumn. Foundation in public lands history, bedrock environmental laws, policy processes and institutions. Research and analysis of current environmental and natural resource policy issues. Focus is domestic illustrated by case studies. Course Attributes: Writing Course-Advanced

- ENST 373A - Nature Works

  Credits: 3. Offered spring. Writing workshop for the creation, critique, and revision of essays about the environment to include natural history, personal narrative, science interpretation, advocacy/editorial, place-based essay, and others. Examination of concepts, forms, and approaches to writing about environmental concerns, awareness and sensitivity. Reading and responding to published work, primarily from the perspective of technique and approach. Course Attributes: Expressive Arts Course (A) Writing Course-Upper-Division

- ENST 382 - Environmental Law

  Credits: 3. Offered spring. Introduction to the history, law and theory of environmental regulation in the United States using public and private land regulation mechanisms as case studies. Basic principles of constitutional and administrative law relevant to environmental regulation, substantive public and private land use law and the history of environmental problems and their regulation. Course Attributes: Writing Course-Advanced

- ENST 391 - Special Topics/Exp Courses

  Credits: 1 TO 12. (R-12) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics.

- ENST 395 - Field Studies: Env. Studies

Credits: 2 TO 3. (R-12) Offered every term. Via extended backcountry travel, experiential examination of cultural history and public lands management, and how those affect ecosystem integrity. Investigation of personal roles in and relationships with human and ecological communities. Offered by the Wild Rockies Field Institute and Northwest Connections. Course Attributes: Internships/Practicums

- ENST 396 - Supervised Internship (PEAS)

  Credits: 0 TO 10. (R-10) Offered Fall (2 cr.), Spring (2 cr.); Summer intensive, (6 cr.). Students learn small scale sustainable vegetable farming in a hands-on work environment at the PEAS farm (15 minute bike ride from campus). Lectures, readings and reflection inform the work. Summer students also visit local farms on once-a-week field trips. PEAS is repeatable, as the curriculum changes across the season, and students can attend any semester, though the 6 credit summer intensive course is the heart of the program. Course Attributes: Internships/Practicums Service Learning/Volunteer Service Learning

- ENST 398 - Cooperative Education/Intern

  Credits: 1 TO 6. Offered autumn and spring. Consent of instructor required. Practical application of classroom learning through internship with governments, organizations or industry. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- ENST 410 - TEK of Native Peoples

  Credits: 3. Offered intermittently. Examines traditional environmental knowledge (TEK) of Native peoples with a special focus on ancient peoples of the Northern Great Plains.

- ENST 420 - US Environmental Movement

  Credits: 3. Offered Intermittently. Study of the environmental movement as a social movement. Examination of different approaches to environmental protection and restoration in view of the movement's historical roots and contemporary debates.

- ENST 427 - Social Issues:The Mekong Delta

  Credits: 3. The course focuses on the history, culture, economy and environment of Vietnam, with particular emphasis on the Mekong Delta region. This is achieved through lectures from local professors at Can Tho University, active participation in field trips, the home stay, course readings, and synthesis through questions sets and discussions provided by University of Montana instructor. The goal of this half of the Vietnam study abroad program is to provide an understanding of the unique environments and the socio-economy of the Mekong Delta region to facilitate learning about the effects of climate change on these complex natural and anthropogenic systems. Co-convenes with ENST 514. Course Attributes: Co-Convened Course

- ENST 430 - Culture & Agriculture

  Credits: 3. Offered spring, from start of semester to mid-April. Surveys treatment of farmers and farming in the humanities. Course covers specific agricultural crops and their effect on social and environmental history, artistic commentary on agricultural life and farmer philosophy. Themes range from agriculturally influenced historical events to Wendell Berry's poetry to Albert Borgmann's philosophy.

- ENST 437 - Climate Change: Mekong Delta

  Credits: 3. This course focuses on the threats posed by climate change in Vietnam, with particular emphasis on the Mekong Delta region. This is achieved through lectures from Can Tho University professors, active participation in field trips, the homestay, course readings, and synthesis through questions sets and discussions provided by University of Montana instructor. The goal of this half of the Vietnam study abroad program is to provide an understanding of the potential impacts of climate change on the ecosystems and people of the Mekong Delta, and explore opportunities for people to adapt to and mitigate these impacts. Co-convenes with ENST 516. Course Attributes: Co-Convened Course

- ENST 472 - Gen Sci: Conserv Ed

  Credits: 3. Offered autumn and spring. A study of the foundations of environmental science and conservation education with applications to community service and teaching.

- ENST 476 - Environmental Citizenship

  Credits: 3. Offered spring. Prereq., open to juniors and seniors only or by consent of instructor. Same as CCS 476. Develops leadership and environmental citizenship skills, values and virtues through student-initiated projects informed by principles of organizing and sustainable behavior change theories of social marketing.

- ENST 480 - Food, Agriculture, Environment

  Credits: 3. Offered spring. Exploration of the premise that agricultural sustainability requires practices, policies, and social arrangements that balance concerns of environmental soundness, economic viability, and social justice among all sectors of society.

- ENST 487 - Globalization, Justice & Envir

  Credits: 3. Offered autumn. Study of current trends in economic globalization and its effects on efforts to work for social justice and environmental sustainability, particularly in the Global South. Examination of different models and theories of globalization, analysis of ethical issues raised, and assessment of alternatives proposed. Course Attributes: Writing Course-Advanced

- ENST 489S - Env. Justice Iss & Solut

  Credits: 3. Offered autumn. Examination of evidence, causes and consequences of social inequality in the distribution of environmental risks and in access to natural resources and environmental amenities. Community, government and industry responses and service approaches for addressing environmental inequities. Course Attributes: Social Sciences Course (S)

- ENST 491 - Special Topics/Exper Courses

  Credits: 1 TO 12. (R-12) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics.

- ENST 492 - Independent Study

  Credits: 1 TO 6. (R-6) Offered autumn and spring. Consent of instructor required. Course material appropriate to the needs and objectives of the individual student.

- ENST 493 - Study Abroad: Envir Justice LA

  Credits: 3. Offered intermittently. Two week travel seminar to one or more Latin American countries to examine Latin American perspectives on environmental justice and efforts toward sustainable development within the context of the global economy and U. S. foreign policy. Required one-credit seminar offered spring semester to provide background readings. Course Attributes: Faculty-Led Study Abroad

- ENST 494 - Seminar/Workshop

  Credits: 1 TO 3. (R-6) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. A seminar on a current environmental topic.

- ENST 499 - Senior Thesis/Capstone

  Credits: 3. Offered intermittently. Prereq., senior standing in EVST. For seniors who want to design and perform a significant capstone project involving research and/or service. Students have responsibility for designing their projects which are subject to faculty approval. A final report and public presentation are required. Honors credit available.

- ENST 505 - Literature of Nature Writing

  Credits: 3. Offered spring. Prereq., graduate standing. Study of nature, environmental, and place-based writing, with emphasis on the American tradition and its relationship to twenty-first century environmental concerns, challenges, and opportunities, and to the current practice of nature and environmental writing. Level: Graduate

- ENST 510 - Native American Environmental Issues

  Credits: 3. This graduate readings seminar provides an overview of environmental issues of Native American communities through the 19th to 21st centuries. Level: Graduate

- ENST 513 - Nat Res Conflict Resolution

  Credits: 3. Offered autumn. Same as NRSM 513 and LAW 613. Prereq., graduate standing. Examines the basic framework for preventing and resolving natural resource and environmental conflicts in America. Reviews the history of alternative approaches, emphasizes the theory and practice of collaboration, and considers future trends. This highly interactive course uses lectures, guest speakers, case studies, and simulations. Level: Graduate

- ENST 514 - Social Issues:The Mekong Delta

  Credits: 3. This course focuses on the history, culture, economy and environment of Vietnam, with particular emphasis on the Mekong Delta region. This is achieved through lectures from local professors at Can Tho University, active participation in field trips, the home stay, course readings, independent graduate research, and synthesis through questions sets and discussions provided

by University of Montana instructor. The goal of this half of the Vietnam study abroad program is to provide an understanding of the unique environments and the socio-economy of the Mekong Delta region to facilitate learning about the effects of climate change on these complex natural and anthropogenic systems. Co-convenes with ENST 427. Level: Graduate Course Attributes: Co-Convened Course

- ENST 515 - Enviro Negotiation Mediation

  Credits: 3. Offered intermittently. Same as NRSM 515 and COMX 515. Prereq., graduate standing. This course prepares students to effectively engage in multiparty negotiation on natural resource and environmental issues. It is grounded in theory and provides an opportunity to develop practical skills in both negotiation and facilitation/mediation. Guest speakers, case studies, and simulations allow students to develop, test, and refine best practices. The course is fast-paced, highly interactive, and serves as the second of three required courses in the Natural Resources Conflict Resolution Program. Level: Graduate

- ENST 516 - Climate Change: Mekong Delta

  Credits: 3. This courses focuses on the threats posed by climate change in Vietnam, with particular emphasis on the Mekong Delta region. This is achieved through lectures from Can Tho University professors, active participation in field trips, field data collection, analysis and interpretation, the homestay, course readings, independent graduate research, and synthesis provided by University of Montana professors. The goal of this half of the Vietnam study abroad program is to provide an understanding of the potential impacts of climate change on the ecosystems and people of the Mekong Delta, and explore opportunities for people to adapt to and mitigate these impacts. Co-convenes with ENST 516. Level: Graduate Course Attributes: Co-Convened Course

- ENST 519 - Foundations of Change

  Credits: 3. Designed for the first-year graduate cohort in Environmental Studies, this foundational course aims to strengthen participants' capacities to effectively meet today's environmental and social justice challenges. Our incoming cohort (around 20-25 in recent years) includes students from a wide variety of backgrounds. The course provides an introduction to the history and development of the environmental movement(s), as well as a theoretical understanding of democracy, citizenship, power, and social change. Participants will also explore their own sense of personal purpose and develop community. Level: Graduate

- ENST 520 - Environmental Organizing

  Credits: 3. Offered intermittently. Prereq., graduate standing. Developing understanding of and skills in community and environmental organizing. Emphasis on theory and practice of civic engagement and social change with a focus on developing and running campaigns and working in a group. Team projects. Level: Graduate

- ENST 521 - Found Environmental Educ

  Credits: 3. Offered autumn. Prereq., graduate standing in environmental studies. Same as C&I 521. Problem-solving approaches to environmental education; problem identification, research and design and implementation of an educational approach to selected environmental issues. Level: Graduate

- ENST 530 - The Greening of Religion

  Credits: 3. Offered yearly. A critical examination of different religious traditions' views on nature and society, and contemporary religious traditions' responses to environmental issues. Level: Graduate

- ENST 535 - Local Climate Solutions

  Credits: 3. Offered intermittently. This course seeks to develop students' understanding and skills for participating in local solutions to climate change that can also support broader conservation, efficiency and sustainability efforts. This will be accomplished by engaging in planning and carrying out group projects that further advance existing climate change mitigation or adaptation efforts. Level: Graduate

- ENST 537 - Bld Effective Environment Org

  Credits: 3. Offered intermittently. Prereq., graduate standing. Focus on the tasks and skills necessary to building and managing effective environmental organizations, particularly non-profit. Budgeting, fund-raising, grant-writing, attracting and utilizing volunteers, working with the media. Strategic approaches and how they are shaped by issue, context, and structure. Level: Graduate

- ENST 542 - Transboundary Env Issues

  Credits: 3. Offered intermittently in autumn. Prereq., graduate standing in environmental studies program. Review of the political systems and administrative systems of each country relevant to

natural resource policy decision-making and ecological systems. Review pertinent literature, interact with stakeholders, and produce group reports. Level: Graduate

- ENST 548 - Super Tchg Envir Ed

  Credits: 3. Offered intermittently. Prereq., ENST 521 or EDU 521. Design, selection and evaluation of materials for the teaching of environmental education. Level: Graduate

- ENST 555 - Rsch Methods for Soc Change

  Credits: 3. Offered intermittently. Prereq., graduate standing. Introduction to qualitative methods of research design, data collection, and analysis. Emphasis on research that facilitates and documents social change processes. Hands-on research experience through fieldwork projects. Includes instruction on writing social science and on research ethics. Level: Graduate

- ENST 560 - Environmental Impact Analysis

  Credits: 3. Offered intermittently. Prereq., graduate standing or consent of instructor. Covers legal and scientific aspects of the Environmental Impact Analysis (EIA) including: What is required by international, national and state law and regulations? How does one organize an effective interdisciplinary team research effort and public participation program? What scientific tools are used in EIA? How could EIA process be improved? Level: Graduate

- ENST 561 - Land Use Planning Law

  Credits: 3. Offered autumn. Same as GPHY 561 and LAW 687. Prereq., graduate standing. Basic overview of the law of land use planning including background in the traditional governmental regulatory, proprietary, and fiscal land use tools. Examination of modern techniques for land use planning; consideration of constitutional limits of authority of state and local governments. Focus on skills in interpreting, drafting and applying state legislation and local ordinances. Level: Graduate

- ENST 563 - Environmental Law I

  Credits: 3. Offered autumn. Prereq., graduate standing in EVST. Same as LAW 650. Philosophy and values underlying environmental regulation, basic introduction to administrative law, in-depth study of air and water pollution and the environmental policy acts. Level: Graduate

- ENST 564 - Environmental Law II

  Credits: 3. Offered autumn. Prereq., graduate standing in EVST. Same as LAW 649. In-depth study of the laws addressing toxic substances and solid and hazardous waste, and the Endangered Species Act. Exploration of interaction between land use regulation and environmental law. Level: Graduate

- ENST 565 - Public Land & Resources Law

  Credits: 3. Offered spring. Prereq., graduate standing in EVST and consent of instr. Same as LAW 654. Historical development of United States public land law, state-federal relations, and the roles of Congress, the executive and the courts; the law applying to specific public land resources: water, minerals, timber, range, and preservation. Level: Graduate

- ENST 567 - Water Law

  Credits: 3. Offered spring. Same as LAW 663. Prereq., graduate standing. Interstate water problems; federal/state powers; federal/Indian water rights/Montana water law. Level: Graduate

- ENST 570 - Ethics & Restoration

  Credits: 3. Offered yearly. Prereq., graduate level or consent of instr. A critical examination of the ethical issues that emerge in the field of ecological restoration, and decisions to manipulate nature intentionally for social and ecological goals. Level: Graduate

- ENST 573 - Environmental Writing

  Credits: 3. Offered autumn. Prereq., graduate standing. Writing workshop designed to improve skills in writing on environmental topics for general audiences. Approaches include personal narrative, natural history, science interpretation, advocacy/argument, place-based essays. Includes analysis of published work from the perspective of technique and craft. Level: Graduate

- ENST 579 - Collaborative Conservation

  Credits: 3. (R-4) Offered every semester. Same as NRSM 579. Prereq., ENST 513 or consent of instructor. Designed as the capstone experience of the Natural Resources Conflict Resolution Program. Provides practical experience in multi-party collaboration and conflict resolution. Students may design their own project in consultation with the director of the NRCR Program, or participate in a project organized and convened by faculty. Projects may be conducted year-round. Level: Graduate

- ENST 580 - The Politics of Food

  Credits: 3. Offered intermittently. This seminar explores social, economic, and ecological issues related to the contemporary food and agricultural system and alternatives to that system. Level: Graduate

- ENST 590 - Supervised Internship PEAS

  Credits: 0 TO 8. (R-8) Spring and autumn, 2 cr.; summer intensive, 3 cr. Prereq., graduate standing. Students learn small scale sustainable vegetable farming in a hands-on work environment at the PEAS farm (15 minute bike ride from campus). Lectures, readings and reflection inform the work. Summer students also visit local farms on a once-a week filed trips. PEAS is repeatable, as the curriculum changes across the season, and students can attend any semester, though the 3 credit (grad level) summer intensive course is the heart of the program. Level: Graduate Course Attributes: Internships/Practicums

- ENST 591 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- ENST 593 - Professional Paper

  Credits: 1 TO 6. (R-6) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Preparation of a professional paper appropriate to the needs and objectives of the individual student. Level: Graduate

- ENST 594 - Graduate Seminar

  Credits: 1 TO 15. (R-15) Offered autumn and spring. Prereq., graduate standing. May be restricted to EVST majors. May require consent of instructor. In-depth analysis of a current environmental topic. Different topics offered each semester. Level: Graduate

- ENST 595 - Special Topics

  Credits: 1 TO 9. (R-9) Offered autumn and spring. Prereq., graduate standing. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics. Level: Graduate

- ENST 596 - Independent Study

  Credits: 1 TO 12. (R-12) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Work on selected problems by individual students under direct faculty supervision. Level: Graduate Course Attributes: Independent Study

- ENST 597 - Research

  Credits: 1 TO 12. (R-12) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Directed individual graduate research and study appropriate to background and objectives of the student. Level: Graduate

- ENST 598 - Internship

  Credits: 1 TO 8. (R-8) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Practical application of classroom learning during placements off campus. Level: Graduate Course Attributes: Internships/Practicums

- ENST 599 - Thesis

  Credits: 1 TO 6. (R-6) Offered autumn and spring. Prereq., graduate standing in EVST and consent of instructor. Preparation of a thesis or manuscript based on research for presentation and/or publication. Level: Graduate

Environmental Studies B.A.

Bachelor of Arts - Environmental Studies

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 54

Required Cumulative GPA: 2.0

Note: To obtain depth of knowledge in an area of focus, students are expected to select a minor or double major from another campus discipline, or work with an EVST advisor on selecting or designing an EVST focus area.

Lower Division Core Courses

Rule: Complete the following subcategories of courses

24 Total Credits Required

Environmental Science and Environmental Studies

Rule: Complete all courses

	Course	Credits
	ENSC 105N - Environmental Science Offered autumn. Provides students with opportunities to use class knowledge to make a difference; helps students build all of the following: scientific literacy; skills in critical thinking, research and self-instruction; an understanding of the scientific basis of environmental issues, policies and laws; habits of sustainable living, scientifically-informed, active participation in social decisions, and service to their community and to the earth.	3 Credits
	ENST 201 - Environmental Info Resources Offered autumn and spring. Students learn how to find, evaluate and use existing information to increase understanding of environmental issues and resolve controversies. Students will research a subject using a variety of sources (refereed literature, government sources, internet sources, interviews); evaluate sources critically; write a literature review and give an oral presentation on their topic. Focus is on critical thinking and dealing with the information explosion.	3 Credits
	ENST 225 - Community & Enviornment Offered autumn. Same as SOCI 225. Exploration of the ways that communities address their environmental concerns. Introduction of relevant social science concepts.	3 Credits
	ENST 230H - Nature and Society UM campus course offered spring. Explores the relationship between ideas about nature and the development of political and social ideas, institutions, and practices, primarily in western (Euro-American) society. Complements ethics offerings in philosophy aimed at environmental studies majors.	3 Credits
Minimum Required Grade: C-		12 Total Credits Required

Chemistry

Rule: Complete the following course

	Course	Credits

	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Math

Rule: Complete the following course

	Course	Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Biology

Rule: Complete 1 of the following

	Course	Credits
	BIOB 101N - Discover Biology Offered every term. Contemporary exploration of the organization and complexity of living organisms and the systems in which they live. The central question of biology--relationship between form and function, acquisition and use of energy, and continuity between generations will be addressed through lectures and laboratory investigations. Credit not allowed toward a major in biology. Credit not allowed for both BIOB 101N and BIOB 160N.	3 Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits

	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Quantitative Skills - Statistics

Rule: Complete 1 of the following

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	PSYX 222 - Psychological Statistics Offered every term. Prereq., PSYX 120; M 115, M 162 or 171. Application of statistical techniques to psychological data. Credit not allowed for both PSYX 222 and SOCI 202.	3 Credits
	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Core

Rule: Complete the following subcategories of courses

15 Total Credits Required

Natural Science - Ecology

Rule: Complete one of the following:

	Course	Credits

	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	ENSC 360 - Applied Ecology Offered autumn. Prereq or coreq ENST 201. To succeed in this course, students also need college level courses in general biology, chemistry & statistics. Principles and concepts of ecology and how they can be applied to inform real life decisions about human interactions with the environment. Emphasizes the science of sustainability and the conservation of watersheds and biodiversity.	3 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Policy

Rule: Complete one of the following:

	Course	Credits
	ENST 367 - Envr Politics & Policies Offered autumn. Foundation in public lands history, bedrock environmental laws, policy processes and institutions. Research and analysis of current environmental and natural resource policy issues. Focus is domestic illustrated by case studies.	3 Credits
	ENST 382 - Environmental Law Offered spring. Introduction to the history, law and theory of environmental regulation in the United States using public and private land regulation mechanisms as case studies. Basic principles of constitutional and administrative law relevant to environmental regulation, substantive public and private land use law and the history of environmental problems and their regulation.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Humanities

Rule: Complete one of the following:

	Course	Credits
	ENST 335L - The Environmental Vision Offered autumn. Provides background, overview, interpretations, and understanding of key concepts, themes, approaches, and forms in American nature and environmental nonfiction as well as that literature's response to and influence on environmental events, figures, and movements.	3 Credits
	ENST 410 - TEK of Native Peoples Offered intermittently. Examines traditional environmental knowledge (TEK) of Native peoples with a special focus on ancient peoples of the Northern Great Plains.	3 Credits
	ENST 430 - Culture & Agriculture Offered spring, from start of semester to mid-April. Surveys treatment of farmers and farming in the humanities. Course covers specific agricultural crops and their effect on social and environmental history, artistic commentary on agricultural life and farmer philosophy. Themes range from agriculturally influenced historical events to Wendell Berry's poetry to Albert Borgmann's philosophy.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science

Rule: Complete one of the following:

	Course	Credits
	ENST 391 - Special Topics/Exp Courses (R-12) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics.	1 To 12 Credits
	ENST 487 - Globalization, Justice & Envir Offered autumn. Study of current trends in economic globalization and its effects on efforts to work for social justice and environmental sustainability, particularly in the Global South. Examination of different models and theories of globalization, analysis of ethical issues raised, and assessment of alternatives proposed.	3 Credits
	ENST 489S - Env. Justice Iss & Solut Offered autumn. Examination of evidence, causes and consequences of social inequality in the distribution of environmental risks and in access to natural resources and environmental amenities. Community, government and industry responses and service approaches for addressing environmental inequities.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Approved Community Service/Internship Experience

Rule: Complete one of the following:

	Course	Credits
	ENSC 398 - Cooperative Education/Intern Offered autumn and spring. Requires consent of instructor. Practical application of classroom learning through internship with governments, organizations or industry. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 6 Credits
	ENST 396 - Supervised Internship (PEAS) (R-10) Offered Fall (2 cr.), Spring (2 cr.); Summer intensive, (6 cr.). Students learn small scale sustainable vegetable farming in a hands-on work environment at the PEAS farm (15 minute bike ride from campus). Lectures, readings and reflection inform the work. Summer students also visit local farms on once-a-week field trips. PEAS is repeatable, as the curriculum changes across the season, and students can attend any semester, though the 6 credit summer intensive course is the heart of the program.	0 To 10 Credits
	ENST 398 - Cooperative Education/Intern Offered autumn and spring. Consent of instructor required. Practical application of classroom learning through internship with governments, organizations or industry. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 6 Credits
Minimum Required Grade: C-		3 Total Credits Required

Elective Environmental Studies Courses

Rule: In addition to the required courses above, complete 9 division credits from the following:

	Course	Credits
	COMX 347 - Rhetoric Nature & Environmtlsm Offered every other year. Same as ENST 377. Survey of rhetorical texts that shape public understanding of nature and environmental issues. Analysis of a range of historical and contemporary environmental texts using theoretical concepts from the rhetorical tradition.	3 Credits
	COMX 349 - Comm Consump & Climate Offered every other year. Same as CCS 349. Analyzes consumption as a communication practice, investigates discourses that promote consumption, and illuminates environmental impacts on consumption.	3 Credits
	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits

	ECNS 445 - Int Env Econ & Clim Change Offered autumn every other year. Same as CCS 445. Prereq., ECNS 201S. An introduction to the economics of various policy approaches towards climate change and other international environmental issues such as trans-boundary pollution problems, international trade and the environment and pollution haven hypothesis.	3 Credits
	ENSC 391 - Special Topics/Exp. Courses (R 12) Offerered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, new courses, or one time offerings of current topics.	1 To 9 Credits
	ENSC 491 - Special Topics/Exper Courses (R-9) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, new courses, or one time offerings of current topics.	1 To 9 Credits
	ENSC 492 - Independent Study (R-6) Offered autumn and spring. Requires consent of instructor. Course material appropriate to the needs and objectives of the individual student.	1 To 6 Credits
	ENSC 494 - Seminar/Workshop (R-6) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. A seminar on a current environmental topic.	1 To 3 Credits
	ENSC 495 - Field Study Offered autumn. Prereq or coreq ENSC 360. Designing, executing, interpreting and documenting field studies. Project oriented.	1 To 10 Credits
	ENST 373A - Nature Works Offered spring. Writing workshop for the creation, critique, and revision of essays about the environment to include natural history, personal narrative, science interpretation, advocacy/editorial, place-based essay, and others. Examination of concepts, forms, and approaches to writing about environmental concerns, awareness and sensitivity. Reading and responding to published work, primarily from the perspective of technique and approach.	3 Credits
	ENST 391 - Special Topics/Exp Courses (R-12) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics.	1 To 12 Credits
	ENST 395 - Field Studies: Env. Studies (R-12) Offered every term. Via extended backcountry travel, experiential examination of cultural history and public lands management, and how those affect ecosystem integrity. Investigation of personal roles in and relationships with human and ecological communities. Offered by the Wild Rockies Field Institute and Northwest Connections.	2 To 3 Credits
	ENST 420 - US Environmental Movement Offered Intermittently. Study of the environmental movement as a social movement. Examination of different approaches to environmental protection and restoration in view of the movement's historical roots and contemporary debates.	3 Credits

	ENST 427 - Social Issues:The Mekong Delta The course focuses on the history, culture, economy and environment of Vietnam, with particular emphasis on the Mekong Delta region. This is achieved through lectures from local professors at Can Tho University, active participation in field trips, the home stay, course readings, and synthesis through questions sets and discussions provided by University of Montana instructor. The goal of this half of the Vietnam study abroad program is to provide an understanding of the unique environments and the socio-economy of the Mekong Delta region to facilitate learning about the effects of climate change on these complex natural and anthropogenic systems. Co-convenes with ENST 514.	3 Credits
	ENST 437 - Climate Change: Mekong Delta This course focuses on the threats posed by climate change in Vietnam, with particular emphasis on the Mekong Delta region. This is achieved through lectures from Can Tho University professors, active participation in field trips, the homestay, course readings, and synthesis through questions sets and discussions provided by University of Montana instructor. The goal of this half of the Vietnam study abroad program is to provide an understanding of the potential impacts of climate change on the ecosystems and people of the Mekong Delta, and explore opportunities for people to adapt to and mitigate these impacts. Co-convenes with ENST 516.	3 Credits
	ENST 472 - Gen Sci: Conserv Ed Offered autumn and spring. A study of the foundations of environmental science and conservation education with applications to community service and teaching.	3 Credits
	ENST 476 - Environmental Citizenship Offered spring. Prereq., open to juniors and seniors only or by consent of instructor. Same as CCS 476. Develops leadership and environmental citizenship skills, values and virtues through student-initiated projects informed by principles of organizing and sustainable behavior change theories of social marketing.	3 Credits
	ENST 480 - Food, Agriculture, Environment Offered spring. Exploration of the premise that agricultural sustainability requires practices, policies, and social arrangements that balance concerns of environmental soundness, economic viability, and social justice among all sectors of society.	3 Credits
	ENST 491 - Special Topics/Exper Courses (R-12) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics.	1 To 12 Credits
	ENST 492 - Independent Study (R-6) Offered autumn and spring. Consent of instructor required. Course material appropriate to the needs and objectives of the individual student.	1 To 6 Credits

	ENST 493 - Study Abroad: Envir Justice LA Offered intermittently. Two week travel seminar to one or more Latin American countries to examine Latin American perspectives on environmental justice and efforts toward sustainable development within the context of the global economy and U. S. foreign policy. Required one-credit seminar offered spring semester to provide background readings.	3 Credits
	ENST 494 - Seminar/Workshop (R-6) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. A seminar on a current environmental topic.	1 To 3 Credits
	ENST 499 - Senior Thesis/Capstone Offered intermittently. Prereq., senior standing in EVST. For seniors who want to design and perform a significant capstone project involving research and/or service. Students have responsibility for designing their projects which are subject to faculty approval. A final report and public presentation are required. Honors credit available.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits
	PHL 323 - Ethics of Climate Change This course examines some of the fundamental issues raised by global climate change and considers how environmental ethics might help to address these issues. Students will become acquainted with the essential elements of climate change science and be provided with an introduction to contemporary approaches to environmental ethics that have developed out of the primary ethical traditions of western thought: deontological (Kantian) ethics, utilitarian ethics, and virtue ethics. In addition, the course examines alternative understandings of the appropriate relationship between humans and the natural world including: “Deep Ecology” and Native American perspectives.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Foreign Language Requirement

Rule: Students must complete successfully the second semester of a Modern and Classical Language at the University of Montana

Minimum Required Grade: C-

10 Total Credits Required

Additional Requirements

Rule: Complete the following subcategories of courses

6 Total Credits Required

> ### *Native American Studies*
> **Rule:** Complete 1 of the following:

	Course	Credits
	ENST 410 - TEK of Native Peoples Offered intermittently. Examines traditional environmental knowledge (TEK) of Native peoples with a special focus on ancient peoples of the Northern Great Plains.	3 Credits
	NASX 303E - Ecol Persp in Nat Amer Trad Offered Autumn and Spring. An examination of Native American environmental ethics and tribal and historical and contemporary use of physical environmental resources.	3 Credits
	NASX 304E - Native American Beliefs/Philos Offered Autumn and Spring. A study of selected ethical systems; origins, world views; religious beliefs and the way they have been affected by western civilization.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Additional Science Course

Rule: Complete 1 of the following:

Note: BIOB 170N: Principles of Biological Diversity may only be used to satisfy this requirement if not used to satisfy the introductory Biology requirement.

	Course	Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	ERTH 303N - Weather and Climate Offered spring. Same as CCS 303N. Origin, composition, structure, and dynamics of the atmosphere, gas and radiation laws, energy budget and balance, weather elements, North American weather systems, and climate change. To succeed in this course students should have comfort with basic algebra.	3 Credits
	GEO 108N - Climate Change Offered autumn. The geoscience perspective on the earth's climate system. Climate processes and feedbacks, climate history from early earth to the ice ages, present and future changes due to natural processes and human activities.	3 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
	NRSM 265 - Elements of Ecological Restora Offered autumn. Prereq., one course in the ecological or biological sciences: BIOO 105N, BIOB 160N, BIOB 170N, BIOB 172, BIOE 370, BIOE 428, BIOE 447 or BIOE 448; or FORS 330; or NRSM 271N or NRSM 462 or consent of instructor. Overview of the natural and social science elements of ecological restoration, including the ecological foundations of restoration, practices used to restore terrestrial and aquatic habitats, philosophical and ethical challenges involved, and current initiatives in Montana and the United States. Includes Saturday field trips.	3 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Environmental Studies Minor

Minor - Environmental Studies (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 25
Required Cumulative GPA: 2.0

Lower Core Courses

Rule: Must complete all of the following:

	Course	Credits
	ENSC 105N - Environmental Science Offered autumn. Provides students with opportunities to use class knowledge to make a difference; helps students build all of the following: scientific literacy; skills in critical thinking, research and self-instruction; an understanding of the scientific basis of environmental issues, policies and laws; habits of sustainable living, scientifically-informed, active participation in social decisions, and service to their community and to the earth.	3 Credits
	ENST 225 - Community & Enviornment Offered autumn. Same as SOCI 225. Exploration of the ways that communities address their environmental concerns. Introduction of relevant social science concepts.	3 Credits
	ENST 230H - Nature and Society UM campus course offered spring. Explores the relationship between ideas about nature and the development of political and social ideas, institutions, and practices, primarily in western (Euro-American) society. Complements ethics offerings in philosophy aimed at environmental studies majors.	3 Credits
		9 Total Credits Required

Upper Division Electives

Rule: Complete the following subcategories of courses

16 Total Credits Required

Environmental Studies

Rule: Must complete 13 credits from the following

	Course	Credits
	COMX 347 - Rhetoric Nature & Environmtlsm Offered every other year. Same as ENST 377. Survey of rhetorical texts that shape public understanding of nature and environmental issues. Analysis of a range of historical and contemporary environmental texts using theoretical concepts from the rhetorical tradition.	3 Credits
	COMX 349 - Comm Consump & Climate Offered every other year. Same as CCS 349. Analyzes consumption as a communication practice, investigates discourses that promote consumption, and illuminates environmental impacts on consumption.	3 Credits

	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits
	ECNS 445 - Int Env Econ & Clim Change Offered autumn every other year. Same as CCS 445. Prereq., ECNS 201S. An introduction to the economics of various policy approaches towards climate change and other international environmental issues such as trans-boundary pollution problems, international trade and the environment and pollution haven hypothesis.	3 Credits
	ENSC 398 - Cooperative Education/Intern Offered autumn and spring. Requires consent of instructor. Practical application of classroom learning through internship with governments, organizations or industry. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 6 Credits
	ENSC 491 - Special Topics/Exper Courses (R-9) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, new courses, or one time offerings of current topics.	1 To 9 Credits
	ENSC 492 - Independent Study (R-6) Offered autumn and spring. Requires consent of instructor. Course material appropriate to the needs and objectives of the individual student.	1 To 6 Credits
	ENSC 495 - Field Study Offered autumn. Prereq or coreq ENSC 360. Designing, executing, interpreting and documenting field studies. Project oriented.	1 To 10 Credits
	ENST 335L - The Environmental Vision Offered autumn. Provides background, overview, interpretations, and understanding of key concepts, themes, approaches, and forms in American nature and environmental nonfiction as well as that literature's response to and influence on environmental events, figures, and movements.	3 Credits
	ENST 367 - Envr Politics & Policies Offered autumn. Foundation in public lands history, bedrock environmental laws, policy processes and institutions. Research and analysis of current environmental and natural resource policy issues. Focus is domestic illustrated by case studies.	3 Credits

	ENST 373A - Nature Works Offered spring. Writing workshop for the creation, critique, and revision of essays about the environment to include natural history, personal narrative, science interpretation, advocacy/editorial, place-based essay, and others. Examination of concepts, forms, and approaches to writing about environmental concerns, awareness and sensitivity. Reading and responding to published work, primarily from the perspective of technique and approach.	3 Credits
	ENST 382 - Environmental Law Offered spring. Introduction to the history, law and theory of environmental regulation in the United States using public and private land regulation mechanisms as case studies. Basic principles of constitutional and administrative law relevant to environmental regulation, substantive public and private land use law and the history of environmental problems and their regulation.	3 Credits
	ENST 391 - Special Topics/Exp Courses (R-12) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics.	1 To 12 Credits
	ENST 395 - Field Studies: Env. Studies (R-12) Offered every term. Via extended backcountry travel, experiential examination of cultural history and public lands management, and how those affect ecosystem integrity. Investigation of personal roles in and relationships with human and ecological communities. Offered by the Wild Rockies Field Institute and Northwest Connections.	2 To 3 Credits
	ENST 396 - Supervised Internship (PEAS) (R-10) Offered Fall (2 cr.), Spring (2 cr.); Summer intensive, (6 cr.). Students learn small scale sustainable vegetable farming in a hands-on work environment at the PEAS farm (15 minute bike ride from campus). Lectures, readings and reflection inform the work. Summer students also visit local farms on once-a-week field trips. PEAS is repeatable, as the curriculum changes across the season, and students can attend any semester, though the 6 credit summer intensive course is the heart of the program.	0 To 10 Credits
	ENST 398 - Cooperative Education/Intern Offered autumn and spring. Consent of instructor required. Practical application of classroom learning through internship with governments, organizations or industry. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 6 Credits
	ENST 420 - US Environmental Movement Offered Intermittently. Study of the environmental movement as a social movement. Examination of different approaches to environmental protection and restoration in view of the movement's historical roots and contemporary debates.	3 Credits

	ENST 427 - Social Issues:The Mekong Delta The course focuses on the history, culture, economy and environment of Vietnam, with particular emphasis on the Mekong Delta region. This is achieved through lectures from local professors at Can Tho University, active participation in field trips, the home stay, course readings, and synthesis through questions sets and discussions provided by University of Montana instructor. The goal of this half of the Vietnam study abroad program is to provide an understanding of the unique environments and the socio-economy of the Mekong Delta region to facilitate learning about the effects of climate change on these complex natural and anthropogenic systems. Co-convenes with ENST 514.	3 Credits
	ENST 430 - Culture & Agriculture Offered spring, from start of semester to mid-April. Surveys treatment of farmers and farming in the humanities. Course covers specific agricultural crops and their effect on social and environmental history, artistic commentary on agricultural life and farmer philosophy. Themes range from agriculturally influenced historical events to Wendell Berry's poetry to Albert Borgmann's philosophy.	3 Credits
	ENST 437 - Climate Change: Mekong Delta This course focuses on the threats posed by climate change in Vietnam, with particular emphasis on the Mekong Delta region. This is achieved through lectures from Can Tho University professors, active participation in field trips, the homestay, course readings, and synthesis through questions sets and discussions provided by University of Montana instructor. The goal of this half of the Vietnam study abroad program is to provide an understanding of the potential impacts of climate change on the ecosystems and people of the Mekong Delta, and explore opportunities for people to adapt to and mitigate these impacts. Co-convenes with ENST 516.	3 Credits
	ENST 472 - Gen Sci: Conserv Ed Offered autumn and spring. A study of the foundations of environmental science and conservation education with applications to community service and teaching.	3 Credits
	ENST 476 - Environmental Citizenship Offered spring. Prereq., open to juniors and seniors only or by consent of instructor. Same as CCS 476. Develops leadership and environmental citizenship skills, values and virtues through student-initiated projects informed by principles of organizing and sustainable behavior change theories of social marketing.	3 Credits
	ENST 480 - Food, Agriculture, Environment Offered spring. Exploration of the premise that agricultural sustainability requires practices, policies, and social arrangements that balance concerns of environmental soundness, economic viability, and social justice among all sectors of society.	3 Credits

	ENST 487 - Globalization, Justice & Envir Offered autumn. Study of current trends in economic globalization and its effects on efforts to work for social justice and environmental sustainability, particularly in the Global South. Examination of different models and theories of globalization, analysis of ethical issues raised, and assessment of alternatives proposed.	3 Credits
	ENST 489S - Env. Justice Iss & Solut Offered autumn. Examination of evidence, causes and consequences of social inequality in the distribution of environmental risks and in access to natural resources and environmental amenities. Community, government and industry responses and service approaches for addressing environmental inequities.	3 Credits
	ENST 491 - Special Topics/Exper Courses (R-12) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. Experimental offerings of visiting professors, of new courses, or one-time offerings of current topics.	1 To 12 Credits
	ENST 492 - Independent Study (R-6) Offered autumn and spring. Consent of instructor required. Course material appropriate to the needs and objectives of the individual student.	1 To 6 Credits
	ENST 493 - Study Abroad: Envir Justice LA Offered intermittently. Two week travel seminar to one or more Latin American countries to examine Latin American perspectives on environmental justice and efforts toward sustainable development within the context of the global economy and U. S. foreign policy. Required one-credit seminar offered spring semester to provide background readings.	3 Credits
	ENST 494 - Seminar/Workshop (R-6) Offered intermittently. May be restricted to EVST majors. May require consent of instructor. A seminar on a current environmental topic.	1 To 3 Credits
	ENST 499 - Senior Thesis/Capstone Offered intermittently. Prereq., senior standing in EVST. For seniors who want to design and perform a significant capstone project involving research and/or service. Students have responsibility for designing their projects which are subject to faculty approval. A final report and public presentation are required. Honors credit available.	3 Credits
	GPHY 421 - Sustainable Cities Offered spring even-numbered years. Prereq., upper-division or graduate standing. Same as CCS 421. A discussion of sustainability efforts in cities around the world. Topics include, for example, urban sprawl and smart growth, alternative energy, public transportation, integrated waste management, integrated water management, green architecture, and urban agriculture.	3 Credits

	PHL 323 - Ethics of Climate Change This course examines some of the fundamental issues raised by global climate change and considers how environmental ethics might help to address these issues. Students will become acquainted with the essential elements of climate change science and be provided with an introduction to contemporary approaches to environmental ethics that have developed out of the primary ethical traditions of western thought: deontological (Kantian) ethics, utilitarian ethics, and virtue ethics. In addition, the course examines alternative understandings of the appropriate relationship between humans and the natural world including: “Deep Ecology” and Native American perspectives.	3 Credits
Minimum Required Grade: C-		13 Total Credits Required

Ecology

Rule: Must complete 1 of the following

	Course	Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	ENSC 360 - Applied Ecology Offered autumn. Prereq or coreq ENST 201. To succeed in this course, students also need college level courses in general biology, chemistry & statistics. Principles and concepts of ecology and how they can be applied to inform real life decisions about human interactions with the environment. Emphasizes the science of sustainability and the conservation of watersheds and biodiversity.	3 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

East Asian Studies

East Asian Studies B.A.

Bachelor of Arts - East Asian Studies

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 44
Required Cumulative GPA: 2.0

Lower DIvision Core Courses

Rule: Complete the following subcategories

6 Total Credits Required

Fundamentals

Rule: Must complete the following course

Note: On occasion the Modern and Classical Languages department offers an alternative Introduction to East Asian Studies course which could fulfill this requirement. Check with the advisor.

	Course	Credits
	HSTR 240 - East Asian Civilizations (WRLD) An interdisciplinary, pluralist, and exploratory introduction to civilizations of East Asia. Primary focus on China, Japan, and Korea, the relations among them and their patterns of interaction with the outside world in pre-modern and modern periods.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Culture and Civilization

Rule: Must complete 1 of the following courses

	Course	Credits
	CHIN 211H - Chinese Culture and Civiliz Offered intermittently. Same as AS and LS 211H. An introduction to the historical, intellectual, political, literary and social developments of China from early times to the present.	3 Credits

	JPNS 150H - Japanese Cult & Civiliz Offered intermittently. Same as AS and LS 210H. The historical, religious, artistic, literary and social developments in Japan from earliest times to the present.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Core Courses

Rule: Must complete the following subcategories

18 Total Credits Required

Chinese Studies

Rule: Must complete 2 courses of Chinese Studies

Japanese Studies

Rule: Must complete 2 courses of Japanese Studies

East Asian Studies

Rule: Must complete 2 courses of Japanese, Chinese, Viet Nam, pan-East Asia, or Buddhism
Note: Student may select from courses as they are available.

Language

Rule: Must complete one of the following subcategories

20 Total Credits Required

Chinese Language

Rule: May select the following language sequence

	Course	**Credits**
	CHIN 101 - Elementary Chinese I Offered autumn. Emphasis on speaking, reading and writing elementary Mandarin.	5 Credits
	CHIN 102 - Elementary Chinese II Prereq., CHIN 101. Offered spring. Continuation of 101.	5 Credits
	CHIN 201 - Intermediate Chinese I Offered autumn. Prereq., CHIN 102 or equiv. Emphasis on oral communication, with continuing development in all major skill areas: listening, speaking, reading and writing.	5 Credits
	CHIN 202 - Intermediate Chinese II Offered spring. Prereq., CHIN 201 or equiv. Continuation of 201.	5 Credits
Minimum Required Grade: C-		20 Total Credits Required

Japanese Language

Rule: May select the following language sequence

	Course	Credits
	JPNS 101 - Elementary Japanese I Offered autumn. Understanding of grammar and basic sentence structures are taught as a foundation for oral comprehension. The students will learn Hiragana and Katakana, two syllabic writing systems, and approximately 400 Kanji ideographs.	5 Credits
	JPNS 102 - Elementary Japanese II Offered spring. Prereq., JPNS 101. Continuation of 101.	5 Credits
	JPNS 201 - Intermediate Japanese I Offered autumn. Prereq., JPNS 102 or equiv. Reading and writing kanji; building oral/aural fluency.	5 Credits
	JPNS 202 - Intermediate Japanese II Offered spring. Prereq., JPNS 201 or equiv. Continuation of JPNS 201.	5 Credits
Minimum Required Grade: C-		20 Total Credits Required

Economics Department

Jeff Bookwalter, Chairperson

The department considers its teaching goals to be three-fold: (1) To present students with the basic theoretical tools of economic analysis, relevant facts and institutional material, which will assist them as civic leaders. (2) To introduce students majoring in economics to the various special fields of study within economics. This training, along with extensive work in the other liberal arts and sciences, is intended to instill breadth of intellectual interest, critical habits of thought, a problem-solving attitude and facility of expression. (3) To help meet, through graduate work, the increasing demands for competent professional economists in industry, commerce, government and education.

Courses cover general economic theory, environmental economics, monetary theory, international economics, public finance, labor economics, economic development, comparative economic systems, econometrics, and industrial organization.

Students major in economics leading to a Bachelor of Arts degree. Graduate work leads to a Master of Arts degree in economics (see Graduate School catalog).

Economics

Back to Top

- ECNS 101S - Economic Way of Thinking
  Credits: 3. Offered autumn and spring. A critical examination of the market mechanism as a social decision-making device to guide the use of a nation's resources. The limitations of these processes in light of current economic problems such as the rise of the large corporation, monopoly, environmental degradation, economic discrimination and the increasing role of the government. Course Attributes: Social Sciences Course (S)
- ECNS 191 - Special Topics
  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.
- ECNS 201S - Principles of Microeconomics
  Credits: 3. Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics. Course Attributes: Social Sciences Course (S)
- ECNS 202S - Principles of Macroeconomics
  Credits: 3. Offered every term. Prereq., ECNS 201S. The determination of the level of national economic activity, inflation, economic instability, the role of money and financial institutions, and selected topics in public economic policy. Course Attributes: Social Sciences Course (S)
- ECNS 217X - Issues in Economic Development
  Credits: 3. Offered intermittently. Prereq., ECNS 201S. Study of the processes of economic growth and development in the less developed world. Course Attributes: Cultural Intl Diversity (X)
- ECNS 301 - Intermediate Micro with Calc
  Credits: 3. Offered spring and autumn. Prereq., ECNS 201S and M 162 or equiv. Analysis of consumer behavior, production, factor pricing, externalities and public goods.
- ECNS 302 - Intermediate Macroeconomics
  Credits: 3. Offered autumn and spring. Prereq., ECNS 202S. Analysis of national income determination, unemployment, and inflation with emphasis on the role of fiscal and monetary policy.
- ECNS 310 - Intro Health Economics
  Credits: 3. Offered intermittently. Prereq., economics course. Survey of market forces that govern the production and consumption of medical care in the U.S. market; uncertainty, asymmetric information, and concentrations of market power resulting in inefficient outcomes. Topics include cost escalations, role of medical insurance, and problems of an aging population.
- ECNS 312 - Labor Economics
  Credits: 3. Offered intermittently. Prereq., ECNS 201S. Economic analysis of labor markets. Theories of wage determination, discrimination and poverty with implications for manpower policy.

- ECNS 313 - Money and Banking

  Credits: 3. Offered intermittently. Prereq., ECNS 202S. Definition and role of money; banks and other financial institutions as suppliers of money; the federal reserve system as a regulator of money; monetary theories, history, and policy.

- ECNS 320 - Public Finance

  Credits: 3. Offered intermittently. Prereq., ECNS 201S. Rationale for governmental expenditure; public goods; public choice. Analysis of expenditure policy. Intergovernmental relations.

- ECNS 391 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- ECNS 392 - Independent Study

  Credits: 1 TO 9. (R-9) Offered intermittently. Prereq., six credits in economics and consent of instr. Course material appropriate to the needs and objectives of the individual student.

- ECNS 398 - Internship

  Credits: 1 TO 6. (R-6) Offered intermittently. Extended classroom experience that provides practical application of classroom learning during placements within the business community. The student must complete a learning agreement with a faculty member, relating the placement opportunity to his or her field of study. The department will determine the number of credits to be earned for the experience based upon the activities outlined in the learning agreement. Prior approval must be obtained from the faculty supervisor and the Internship Services office. The department has determined that credit for this course cannot count in the 36 credit minimum requirement for the major. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- ECNS 403 - Introduction to Econometrics

  Credits: 4. Offered autumn. Prereq., an introductory statistics course. Quantitative methods in economics with emphasis on regression analysis.

- ECNS 405 - Game Theory

  Credits: 3. Offered every other autumn. Prereq., ECNS 201S. An introduction to the tools of game theory and how they are applied. In many real-world economic situations, outcomes are jointly determined where one agent's choices will affect another's welfare, and vice versa. Game theory provides a method of analyzing these economic situations where decisions are interrelated, and each agent recognizes this fact and thus makes decisions strategically.

- ECNS 406 - Industrial Organization

  Credits: 3. Offered intermittently. Prereq., ECNS 201S. The theoretical basis for public policy solutions to market power. Emphasis on case studies in matters of antitrust, regulation of public utilities, and public ownership of business enterprises.

- ECNS 431 - International Trade

  Credits: 3. Offered intermittently. Prereq., ECNS 201 or consent of instr. International trade: theory, policy, institutions, and issues. Analysis of comparative advantage and trade restrictions, negotiations, and agreements.

- ECNS 433 - Economics of the Environment

  Credits: 3. Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440. Course Attributes: Writing Course-Intermediate

- ECNS 445 - Int Env Econ & Clim Change

  Credits: 3. Offered autumn every other year. Same as CCS 445. Prereq., ECNS 201S. An introduction to the economics of various policy approaches towards climate change and other international environmental issues such as trans-boundary pollution problems, international trade and the environment and pollution haven hypothesis.

- ECNS 450 - Adv. Topics in Economic Dev.

  Credits: 3. Offered intermittently. Prereq., ECNS 201S and ECNS 202S, or consent of instructor. Advanced treatment of the processes of economic growth and development in the less developed world.

- ECNS 451 - Behavioral and Experimental Economics

  Credits: 3. Prereq., ECNS 201. An overview of experimental economics and behavioral economics. Outlines methods and instruments frequently used in economics experiments. Experimental design and assessment. Risk aversion, prospect theory, preference stability, and altruism.

- ECNS 488 - Res Meth & Thesis Design

  Credits: 2. Offered autumn. Prereq., senior standing, economics major. Development of senior thesis proposal; presentation of research topics and methods by economics faculty and seminar participants. Course Attributes: Writing Course-Advanced

- ECNS 491 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- ECNS 492 - Independent Study

  Credits: 1 TO 15. (R-15) Offered intermittently. Prereq., 12 credits in economics and consent of instr.

- ECNS 494 - Senior Seminar

  Credits: 2. Offered spring. Prereq., senior standing, economics major. Capstone course for economics majors. Advanced topics in economic methodology, theory and/or public affairs.

- ECNS 499 - Senior Thesis/Capstone

  Credits: 2. Offered spring. Prereq., senior standing, economics major. Completion of senior thesis; presentation of results by seminar participants. Course Attributes: Writing Course-Advanced

- ECNS 501 - Graduate Research

  Credits: 1 TO 6. (R-6) Offered autumn and spring. Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate

- ECNS 511 - Microeconomic Theory

  Credits: 3. Offered autumn. Prereq., ECNS 301. Advanced theoretical treatment of consumer and producer behavior. Level: Graduate

- ECNS 513 - Macroeconomic Theory

  Credits: 3. Offered spring. Prereq., ECNS 302. Advanced theoretical treatment of national income determination, unemployment and inflation. Level: Graduate

- ECNS 560 - Advanced Econometrics

  Credits: 4. Offered spring. Prereq., ECNS 403. Advanced quantitative methods in econometrics. Coverage of probit-logit regression models, simultaneous equation system, and other specialized techniques. Level: Graduate

- ECNS 569 - Empirical Research Design

  Credits: 1 TO 3. (R-6) Offered every term. Role and scope of empirical research. Planning and conduct of a research project. Level: Graduate

- ECNS 595 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate Course Attributes: Internships/Practicums

- ECNS 596 - Independent Study

  Credits: 1 TO 9. (R-9) Offered intermittently. Course material appropriate to the needs and objectives of the individual student. Level: Graduate Course Attributes: Independent Study

- ECNS 598 - Internship

  Credits: 1 TO 9. (R-9) Offered intermittently. Prereq., consent of department. Extended classroom experience that provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. Level: Graduate Course Attributes: Internships/Practicums

- ECNS 599 - Thesis

  Credits: 1 TO 12. (R-9) Offered every term. Preparation of a thesis or manuscript based on research for presentation and/or publication. Level: Graduate

Economics B.A.

Bachelor of Arts - Economics

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 36

Required Cumulative GPA: 2.0

Note: Refer to graduation requirements listed previously in the catalog. See index.

Economics - Lower-division Core

Rule: All courses are required.

Note: Within the 36 credits the student must include ECNS 201S, 202S. Three credits of ECNS 101S may be counted toward the additional fourteen credits of upper-division economics courses if taken before attaining junior status.

	Course	Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	ECNS 202S - Principles of Macroeconomics Offered every term. Prereq., ECNS 201S. The determination of the level of national economic activity, inflation, economic instability, the role of money and financial institutions, and selected topics in public economic policy.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Economics - Upper-division Core

Rule: All courses are required.

Note: Within the 36 credits the student must include ECNS 301, 302, 403, 488, 494, 499 and fourteen economics elective credits numbered 300 or above. ECNS 398 credits do not count toward the 36-credit requirement. The Upper-division Writing Expectation must be met by successfully completing the Senior Economics Thesis, ECNS 488 and 499.

	Course	Credits
	ECNS 301 - Intermediate Micro with Calc Offered spring and autumn. Prereq., ECNS 201S and M 162 or equiv. Analysis of consumer behavior, production, factor pricing, externalities and public goods.	3 Credits
	ECNS 302 - Intermediate Macroeconomics Offered autumn and spring. Prereq., ECNS 202S. Analysis of national income determination, unemployment, and inflation with emphasis on the role of fiscal and monetary policy.	3 Credits

	ECNS 403 - Introduction to Econometrics Offered autumn. Prereq., an introductory statistics course. Quantitative methods in economics with emphasis on regression analysis.	4 Credits
	ECNS 488 - Res Meth & Thesis Design Offered autumn. Prereq., senior standing, economics major. Development of senior thesis proposal; presentation of research topics and methods by economics faculty and seminar participants.	2 Credits
	ECNS 494 - Senior Seminar Offered spring. Prereq., senior standing, economics major. Capstone course for economics majors. Advanced topics in economic methodology, theory and/or public affairs.	2 Credits
	ECNS 499 - Senior Thesis/Capstone Offered spring. Prereq., senior standing, economics major. Completion of senior thesis; presentation of results by seminar participants.	2 Credits
Minimum Required Grade: C-		16 Total Credits Required

Upper-division Electives

Rule: A minimum of fourteen credits of upper-division Economics electives is required; more credits may be taken.

Note: A minimum of fourteen credits of upper-division Economics electives is needed to satisfy the economics degree. ECNS 101S may be counted toward these additional 14 credits if taken before attaining junior status (60+ credits). ECNS 398 does NOT count toward the 36-credit requirement; however, the following may count as upper-division economics electives: GPHY 323S, PSCI 365, FORS 320 and NRSM 425.

	Course	**Credits**
	ECNS 310 - Intro Health Economics Offered intermittently. Prereq., economics course. Survey of market forces that govern the production and consumption of medical care in the U.S. market; uncertainty, asymmetric information, and concentrations of market power resulting in inefficient outcomes. Topics include cost escalations, role of medical insurance, and problems of an aging population.	3 Credits
	ECNS 312 - Labor Economics Offered intermittently. Prereq., ECNS 201S. Economic analysis of labor markets. Theories of wage determination, discrimination and poverty with implications for manpower policy.	3 Credits
	ECNS 313 - Money and Banking Offered intermittently. Prereq., ECNS 202S. Definition and role of money; banks and other financial institutions as suppliers of money; the federal reserve system as a regulator of money; monetary theories, history, and policy.	3 Credits
	ECNS 320 - Public Finance Offered intermittently. Prereq., ECNS 201S. Rationale for governmental expenditure; public goods; public choice. Analysis of expenditure policy. Intergovernmental relations.	3 Credits

	ECNS 391 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits
	ECNS 405 - Game Theory Offered every other autumn. Prereq., ECNS 201S. An introduction to the tools of game theory and how they are applied. In many real-world economic situations, outcomes are jointly determined where one agent's choices will affect another's welfare, and vice versa. Game theory provides a method of analyzing these economic situations where decisions are interrelated, and each agent recognizes this fact and thus makes decisions strategically.	3 Credits
	ECNS 406 - Industrial Organization Offered intermittently. Prereq., ECNS 201S. The theoretical basis for public policy solutions to market power. Emphasis on case studies in matters of antitrust, regulation of public utilities, and public ownership of business enterprises.	3 Credits
	ECNS 431 - International Trade Offered intermittently. Prereq., ECNS 201 or consent of instr. International trade: theory, policy, institutions, and issues. Analysis of comparative advantage and trade restrictions, negotiations, and agreements.	3 Credits
	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits
	ECNS 445 - Int Env Econ & Clim Change Offered autumn every other year. Same as CCS 445. Prereq., ECNS 201S. An introduction to the economics of various policy approaches towards climate change and other international environmental issues such as trans-boundary pollution problems, international trade and the environment and pollution haven hypothesis.	3 Credits
	ECNS 450 - Adv. Topics in Economic Dev. Offered intermittently. Prereq., ECNS 201S and ECNS 202S, or consent of instructor. Advanced treatment of the processes of economic growth and development in the less developed world.	3 Credits
	ECNS 491 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits
	FORS 320 - Forest Environmental Economics Offered autumn. Prereq., ECNS 201S; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. Economic techniques to support decision making about the allocation of scarce resources, and management of forests for timber and other ecosystem services.	3 Credits

	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	NRSM 425 - Nat Res & Envir Economics Offered alternate spring. Prereq., ENSC 201S or FORS 320; and M 115, M 121, M 122, M 151, M 162, M 171, or 172. Introduction to analytical approaches for economic analysis of management of non-renewable resources, fisheries, forests, threatened and endangered species, and the atmosphere.	3 Credits
	PSCI 365 - Pub Policy Issues and Analysis Examines a variety of public policy issues including economic, social welfare, health care, environmental and criminal justice policy. Emphasis is placed on substantive policies and policy analysis.	3 Credits
Minimum Required Grade: C-		14 Total Credits Required

Non-economics Required Courses

Rule: All courses are required.

Note: Non-economics courses required for the undergraduate degree are: M 115, M 162 and STAT 216 or equivalent. M 162 must be taken before ECNS 301. STAT 216 must be taken before ECNS 403. Students may prefer to take the two-course sequence M 171 and M 172 instead of M 162. Students planning graduate study in economics should take M 171 and M 172 and consider M 221, M 307 and ECNS 511, 513 and 560.

	Course	**Credits**
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		11 Total Credits Required

Teaching Economics

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course

requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

Teacher Preparation in Economics

Students who want to be licensed to teach economics at the high-school level must complete the BA degree requirements in economics. They also must complete a teaching major or minor in a second field of their choice and the professional licensure program in the College of Education. Students may also earn a teaching minor in economics. See the Department of Curriculum & Instruction for information about admission to the Teacher Education Program and completion of these licensure programs.

To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a major/minor form for graduation or the major/minor/concentration section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Tracks will not appear on your UM transcript, diploma, university lists, student data system, or university publication and are used for advising purposes only. You do not fill out a major change for a track.

Bachelor of Arts - Economics; Track: Teaching Economics

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 36

Required Cumulative GPA: 2.0

Note: This major does not qualify as a single field endorsement. Individuals must complete a second teaching major or minor in another content area. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A major GPA of 2.75 is required to be eligible for student teaching.

Economics - Lower-division Core

Rule: All courses are required.

Note: Within the 36 credits the student must include ECNS 201S, 202S. Three credits of ECNS 101S may be counted toward the additional fourteen credits of upper-division economics courses if taken before attaining junior status.

	Course	Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	ECNS 202S - Principles of Macroeconomics Offered every term. Prereq., ECNS 201S. The determination of the level of national economic activity, inflation, economic instability, the role of money and financial institutions, and selected topics in public economic policy.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Economics - Upper-division Core

Rule: All courses are required.

Note: Within the 36 credits the student must include ECNS 301, 302, 403, 488, 494, 499 and fourteen economics elective credits numbered 300 or above. ECNS 398 credits do not count toward the 36-credit requirement. The Upper-division Writing Expectation must be met by successfully completing the Senior Economics Thesis, ECNS 488 and 499.

	Course	Credits
	ECNS 301 - Intermediate Micro with Calc Offered spring and autumn. Prereq., ECNS 201S and M 162 or equiv. Analysis of consumer behavior, production, factor pricing, externalities and public goods.	3 Credits
	ECNS 302 - Intermediate Macroeconomics Offered autumn and spring. Prereq., ECNS 202S. Analysis of national income determination, unemployment, and inflation with emphasis on the role of fiscal and monetary policy.	3 Credits
	ECNS 403 - Introduction to Econometrics Offered autumn. Prereq., an introductory statistics course. Quantitative methods in economics with emphasis on regression analysis.	4 Credits
	ECNS 488 - Res Meth & Thesis Design Offered autumn. Prereq., senior standing, economics major. Development of senior thesis proposal; presentation of research topics and methods by economics faculty and seminar participants.	2 Credits
	ECNS 494 - Senior Seminar Offered spring. Prereq., senior standing, economics major. Capstone course for economics majors. Advanced topics in economic methodology, theory and/or public affairs.	2 Credits
	ECNS 499 - Senior Thesis/Capstone Offered spring. Prereq., senior standing, economics major. Completion of senior thesis; presentation of results by seminar participants.	2 Credits
Minimum Required Grade: C-		16 Total Credits Required

Upper-division Electives

Rule: Fourteen additional credits from the following upper-division courses are required.

Note: A minimum of fourteen credits of upper-division Economics electives are needed to satisfy the economics degree. ECNS 101S may be counted toward these additional 14 credits if taken before attaining junior status (60+ credits). ECNS 398 does NOT toward the 36-credit requirement; however, the following may count as upper-division economics electives: GPHY 323S, PSCI 365, FORS 320 and NRSM 425.

	Course	Credits
	ECNS 310 - Intro Health Economics Offered intermittently. Prereq., economics course. Survey of market forces that govern the production and consumption of medical care in the U.S. market; uncertainty, asymmetric information, and concentrations of market power resulting in inefficient outcomes. Topics include cost escalations, role of medical insurance, and problems of an aging population.	3 Credits

	ECNS 312 - Labor Economics Offered intermittently. Prereq., ECNS 201S. Economic analysis of labor markets. Theories of wage determination, discrimination and poverty with implications for manpower policy.	3 Credits
	ECNS 313 - Money and Banking Offered intermittently. Prereq., ECNS 202S. Definition and role of money; banks and other financial institutions as suppliers of money; the federal reserve system as a regulator of money; monetary theories, history, and policy.	3 Credits
	ECNS 320 - Public Finance Offered intermittently. Prereq., ECNS 201S. Rationale for governmental expenditure; public goods; public choice. Analysis of expenditure policy. Intergovernmental relations.	3 Credits
	ECNS 391 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits
	ECNS 405 - Game Theory Offered every other autumn. Prereq., ECNS 201S. An introduction to the tools of game theory and how they are applied. In many real-world economic situations, outcomes are jointly determined where one agent's choices will affect another's welfare, and vice versa. Game theory provides a method of analyzing these economic situations where decisions are interrelated, and each agent recognizes this fact and thus makes decisions strategically.	3 Credits
	ECNS 406 - Industrial Organization Offered intermittently. Prereq., ECNS 201S. The theoretical basis for public policy solutions to market power. Emphasis on case studies in matters of antitrust, regulation of public utilities, and public ownership of business enterprises.	3 Credits
	ECNS 431 - International Trade Offered intermittently. Prereq., ECNS 201 or consent of instr. International trade: theory, policy, institutions, and issues. Analysis of comparative advantage and trade restrictions, negotiations, and agreements.	3 Credits
	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits
	ECNS 445 - Int Env Econ & Clim Change Offered autumn every other year. Same as CCS 445. Prereq., ECNS 201S. An introduction to the economics of various policy approaches towards climate change and other international environmental issues such as trans-boundary pollution problems, international trade and the environment and pollution haven hypothesis.	3 Credits

	ECNS 450 - Adv. Topics in Economic Dev. Offered intermittently. Prereq., ECNS 201S and ECNS 202S, or consent of instructor. Advanced treatment of the processes of economic growth and development in the less developed world.	3 Credits
	ECNS 491 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits
	FORS 320 - Forest Environmental Economics Offered autumn. Prereq., ECNS 201S; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. Economic techniques to support decision making about the allocation of scarce resources, and management of forests for timber and other ecosystem services.	3 Credits
	GPHY 323S - Econ. Geog. of Rural Areas Offered spring odd-numbered years. Study of the location of economic activities, including agriculture, industry, and services. Focus on the changing nature of rural areas.	3 Credits
	NRSM 425 - Nat Res & Envir Economics Offered alternate spring. Prereq., ENSC 201S or FORS 320; and M 115, M 121, M 122, M 151, M 162, M 171, or 172. Introduction to analytical approaches for economic analysis of management of non-renewable resources, fisheries, forests, threatened and endangered species, and the atmosphere.	3 Credits
	PSCI 365 - Pub Policy Issues and Analysis Examines a variety of public policy issues including economic, social welfare, health care, environmental and criminal justice policy. Emphasis is placed on substantive policies and policy analysis.	3 Credits
Minimum Required Grade: C-		14 Total Credits Required

Non-economics Required Courses

Rule: All courses are required.

Note: Non-economics courses required for the undergraduate degree are: M 115, M 162 and STAT 216 or equivalent. M 162 must be taken before ECNS 301. Stat 216 must be taken before ECNS 403. Students may prefer to take the two-sequence M 171 and M 172 instead of M 162. Students planning graduate study in economics should take M 171 and 172 and consider M 221, M 307 and ECNS 511, 513 and 560.

Languages: Students graduating in Economics may substitute STAT 216 and either M 162 or M 171 or M 172 in place of the Modern and Classical Language requirement.

	Course	**Credits**
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits

	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		11 Total Credits Required

Teaching Track

Rule: Must complete the following course

Note: The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Methods: 5-12 Social Studies.

	Course	**Credits**

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Teaching Economics Minor

A teaching minor is an academic minor which may contain different course requirements designed to meet state standards. Those interested in teaching in K-12 schools must complete a teaching major in a content area plus the teacher preparation program through the Department of Curriculum and Instruction. Additional teaching areas can be added through completion of either a teaching major or a teaching minor in that content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

The term 'minor' for this teaching option refers to courses that need to be completed. To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a minor form for graduation or the minor section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Minor - Economics (Minor); Track: Teaching Economics

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 21

Required Cumulative GPA: 2.0

Economics - Lower-division Core

Rule: All courses are required.

	Course	Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	ECNS 202S - Principles of Macroeconomics Offered every term. Prereq., ECNS 201S. The determination of the level of national economic activity, inflation, economic instability, the role of money and financial institutions, and selected topics in public economic policy.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Economics - Upper-division Core

Rule: All courses are required.

Note: M 115 and M 162 should be taken before enrolling in ECNS 301.

	Course	Credits
	ECNS 301 - Intermediate Micro with Calc Offered spring and autumn. Prereq., ECNS 201S and M 162 or equiv. Analysis of consumer behavior, production, factor pricing, externalities and public goods.	3 Credits

	ECNS 302 - Intermediate Macroeconomics Offered autumn and spring. Prereq., ECNS 202S. Analysis of national income determination, unemployment, and inflation with emphasis on the role of fiscal and monetary policy.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Economics - Upper-division Electives

Rule: Six additional credits of economics classes numbered 300 or above

Note: Students are required to complete STAT 216, Intro to Statistics (or equivalent) with a C- or better before enrolling in ECNS 403, Introduction to Econometrics.

	Course	Credits
	ECNS 310 - Intro Health Economics Offered intermittently. Prereq., economics course. Survey of market forces that govern the production and consumption of medical care in the U.S. market; uncertainty, asymmetric information, and concentrations of market power resulting in inefficient outcomes. Topics include cost escalations, role of medical insurance, and problems of an aging population.	3 Credits
	ECNS 312 - Labor Economics Offered intermittently. Prereq., ECNS 201S. Economic analysis of labor markets. Theories of wage determination, discrimination and poverty with implications for manpower policy.	3 Credits
	ECNS 313 - Money and Banking Offered intermittently. Prereq., ECNS 202S. Definition and role of money; banks and other financial institutions as suppliers of money; the federal reserve system as a regulator of money; monetary theories, history, and policy.	3 Credits
	ECNS 320 - Public Finance Offered intermittently. Prereq., ECNS 201S. Rationale for governmental expenditure; public goods; public choice. Analysis of expenditure policy. Intergovernmental relations.	3 Credits
	ECNS 391 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits
	ECNS 403 - Introduction to Econometrics Offered autumn. Prereq., an introductory statistics course. Quantitative methods in economics with emphasis on regression analysis.	4 Credits
	ECNS 405 - Game Theory Offered every other autumn. Prereq., ECNS 201S. An introduction to the tools of game theory and how they are applied. In many real-world economic situations, outcomes are jointly determined where one agent's choices will affect another's welfare, and vice versa. Game theory provides a method of analyzing these economic situations where decisions are interrelated, and each agent recognizes this fact and thus makes decisions strategically.	3 Credits

	ECNS 406 - Industrial Organization Offered intermittently. Prereq., ECNS 201S. The theoretical basis for public policy solutions to market power. Emphasis on case studies in matters of antitrust, regulation of public utilities, and public ownership of business enterprises.	3 Credits
	ECNS 431 - International Trade Offered intermittently. Prereq., ECNS 201 or consent of instr. International trade: theory, policy, institutions, and issues. Analysis of comparative advantage and trade restrictions, negotiations, and agreements.	3 Credits
	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits
	ECNS 445 - Int Env Econ & Clim Change Offered autumn every other year. Same as CCS 445. Prereq., ECNS 201S. An introduction to the economics of various policy approaches towards climate change and other international environmental issues such as trans-boundary pollution problems, international trade and the environment and pollution haven hypothesis.	3 Credits
	ECNS 450 - Adv. Topics in Economic Dev. Offered intermittently. Prereq., ECNS 201S and ECNS 202S, or consent of instructor. Advanced treatment of the processes of economic growth and development in the less developed world.	3 Credits
	ECNS 491 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits
Minimum Required Grade: C-		6 Total Credits Required

Teaching Licensure Requirements

Note: Individuals completing a teaching minor must also complete a teaching major in another content area. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A minor GPA of 2.75 is required to be eligible for student teaching.

Non-economics Required Courses

Rule: All courses are required.

Note: M 115 (or equivalent) and M 162 should be taken before enrolling in ECNS 301.

	Course	**Credits**

	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		7 Total Credits Required

Teaching Methods Course

Rule: Complete the following course

Note: The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Methods: 5-12 Social Studies.

	Course	**Credits**

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		7 Total Credits Required

The Bachelor of Applied Science (B.A.S.) degree at the University of Montana (UM) is designed for individuals who have completed an Associate of Applied Science (AAS) degree with a 2.50 grade point average at a regionally accredited institution. (The Missoula College section of the University of Montana-Missoula catalog identifies Associate of Applied Science degree programs offered at The University of Montana.) Individuals pursuing the B.A.S. are those who are seeking additional education to strengthen their planned or previous training and improve career advancement opportunities.

As part of the B.A.S. curriculum, students must develop a degree plan tailored to their academic and professional goals. Due to the nature of the B.A.S., many plans are interdisciplinary in nature (i.e. consist of courses from multiple disciplines). Students initially meet with a B.A.S. advisor at Missoula College for assistance in developing their degree plan curriculum. After drafting their plan, students create a degree plan committee that consists of faculty members from disciplines represented in the plan. This committee provides final approval of the plan.

Bachelor of Applied Science students must meet all the University of Montana requirements for graduation. Up to 50 technical credits from an accredited A.A.S. program will count toward the 127 total credits required for graduation.

Any courses taken as part of the A.A.S. that can count towards UM General Education Requirements (e.g. certain writing, psychology, math, and communication courses) *are not* considered technical and, hence, are not included in this 50 technical credit maximum.

It is important to understand that the B.A.S. degree does not identify a specific discipline major. Even though some plans may consist of courses from one sole discipline, the student is NOT a major in that discipline. Hence, the B.A.S. student's transcript and diploma will not indicate a specific major or concentration area.

Although students submit their application for admission to and are initially advised through Missoula College, B.A.S. students are enrolled through the mountain campus and, as such, are assessed UM-Missoula tuition rates.

Students interested in pursuing the B.A.S. degree should review the Missoula College Academic Advising Center's B.A.S. webpage for informational resources and to learn how to request an initial advising appointment.

Bachelor of Applied Science - Applied Science

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 127

Required Cumulative GPA: 2.0

Note: null

Writing Skills

Rule: Both WRIT 101 AND an Approved Writing Course are required.

Note: NOTE: Students who place into and successfully complete WRIT 201 are considered to have satisfied both the WRIT 101 and the Lower-Division Approved Writing Course General Education Requirements.

Minimum Required Grade: C-

6 Total Credits Required

WRIT 101

Rule: Take 1 of the courses below.

Note: Appropriate placement into WRIT 101/201 required. Prerequisites may apply.

	Course	Credits

	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
	WRIT 201 - College Writing II Offered autumn and spring. Prereq., placement or C or better in WRIT 101. MUSWA at or above 5.5, SAT/ACT essay at or above 11, a SAT writing section score at or above 700 or a Combined English/Writing portion of the ACT at or above 32. Designed for first year students with advanced writing ability and students who seek a lower-division writing course. Offers instruction in rhetorical reading and writing, particularly the study and practice of written argumentation in different academic and civic contexts.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Lower-Division Approved Writing Course

Rule: Any course designated as an Approved Writing Course during semester it's taken.

Perspectives

Rule: A minimum of 3 credits towards each Perspective Category is required, except Natural Sciences.

Note: Some courses satisfy multiple Perspectives or GER Categories. Some courses included in your specific degree plan may overlap with Perspective or other GER categories; visit with your advisor for more information.

Minimum Required Grade: C-

27 Total Credits Required

Expressive Arts (A)

Rule: A minimum of three credits is required.

Literary & Artistic Studies (L)

Rule: A minimum of three credits is required.

Historical & Cultural Studies (H)

Rule: A minimum of three credits is required.

Social Sciences (S)

Rule: A minimum of three credits is required.

Ethical & Human Values (E)

Rule: A minimum of three credits is required.

American & European Perspectives (Y)

Rule: A minimum of three credits is required.

Indigenous & Global Perspectives (X)

Rule: A minimum of three credits is required.

Natural Sciences (N)

Rule: A minimum of six credits is required. At least one course must have a laboratory component.

Symbolic System/Foreign Language

Rule: Students must complete either a Symbolic System OR a Foreign Language.
Minimum Required Grade: C-
3-10 Total Credits Required

Symbolic Systems

Rule: Successful completion of 1 course from the list below.

Note: Prerequisites apply for all courses listed below; some courses from this list are major-restricted. Other baccalaureate major-specific Symbolic Systems may be used in lieu of course list above; speak with your advisor for more information.

	Course	Credits
	M 133 - Geom & Meas for K-8 Teachers Offered autumn and spring. Prereq., M 132. The study of geometry and geometric measurement for prospective elementary and middle school teachers, including synthetic, transformational, and coordinate geometry, constructions, congruence and similarity, 2-dimensional and 3-dimensional measurement, and problem solving.	3 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	PSYX 222 - Psychological Statistics Offered every term. Prereq., PSYX 120; M 115, M 162 or 171. Application of statistical techniques to psychological data. Credit not allowed for both PSYX 222 and SOCI 202.	3 Credits

	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Foreign Language

Rule: Successful completion of first-year sequence of a Modern and Classical Language (MCLL).

Note: A first-year sequence usually consists of courses numbered 101 & 102 (5 credits each) for most catalog-approved languages, though some exceptions to this course numbering and sequencing apply. Depending on the language, students may take a placement test to demonstrate proficiency to receive non-credit exemption from this requirement. Refer to the General Education Requirements section of this catalog and speak with your advisor for more information.

Mathematics

Rule: Any Mathematics course level 104 or higher (excluding M 111 Technical Mathematics).

Note: Appropriate placement into mathematics courses required. Prerequisites may apply. If a student successfully places into and completes a mathematics (either "M" or "STAT") course that is also considered a Symbolic System, that course may be used to count towards both the Mathematics and Symbolic Systems General Education Requirements.

Minimum Required Grade: C-

3-4 Total Credits Required

Upper-Division Credit Requirement

Rule: 39 upper-division courses required for UM GERs. At least 30 of the 39 upper-division credits must be from the degree plan.

39 Total Credits Required

Upper-Division Writing

Rule: At least one upper-division writing course is required for UM GERs.

Note: This course may be included as part of the student's degree plan or total Upper-Division Credits.

3 Total Credits Required

AAS Degree Credits

Rule: Up to 50 technical credits earned from AAS may be counted towards the 127 required for the BAS.

Minimum Required Grade: C-

38-50 Total Credits Required

Applied Science

English Department

Beverly Chin, Chair

The Department of English is among the oldest and most prestigious units at the University. As one of the campus's original departments, it offered some of the University's inaugural courses, including literature classes taught by UM's first president, Oscar J. Craig. In 1919, Rhodes Scholar H.G. Merriam inaugurated one of the first creative writing programs in the country. Now, more than a century old, this department offers a B.A. with options in Literature, Creative Writing, Teaching, Film Studies, and Linguistics, and graduate degrees in Creative Writing (M.F.A.), Literature (M.A.), and Teaching (M.A.). Our Composition program serves the entire University by offering the first-year composition requirement, as well as courses in advanced composition and graduate seminars in the teaching of writing. We have a relatively new minor in Irish Studies.

Admission Requirements

To be admitted to any option of the undergraduate English major, a student must satisfy the following requirements:

1. Completion of 24 credits overall with a minimum cumulative GPA of 2.5 or a GPA of 2.5 in the previous two terms.
2. Completion of at least nine credits in English, excluding WRIT (composition) courses, with a minimum GPA of 2.5 and no grade lower than a C (2.00) in those courses.

Students who intend to major in English but who have not yet met the above requirements are admitted to the program as pre-English majors. Pre-English majors will be assigned to the English department Academic Advisor. Before a student can graduate with a major in English, she or he must meet the requirements to become an English major and declare a specific option within the program.

Creative Writing

Back to Top

- **CRWR 115L - Montana Writers Live**
  Credits: 3. (R-6) Offered autumn. Open to all majors. An introduction to Montana's practicing creative writers and their work through reading, live performances and discussion. Regional poets and prose writers will read from their work and lead class discussion. Students prepare questions developed from readings and criticism. Course Attributes: English Course Lit & Artistic Studies (L)
- **CRWR 191 - Special Topics**
  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course
- **CRWR 212A - Intro Nonfiction Workshop**
  Credits: 3. A study of the art of nonfiction through reading and responding to contemporary nonfiction and the writing of original nonfiction works. Focus is on creative expression, writing technique and nonfiction forms. Students begin with writing exercises and brief essays, advancing to longer forms as the semester progresses. Course Attributes: Expressive Arts Course (A)
- **CRWR 234 - The Oval: Literary Mag**
  Credits: 3. This course is open to undergraduates who have completed at least one semester of creative writing. Students focus on the editing, design, layout and marketing of The Oval, University of Montana's undergraduate literary magazine. Students will read, discuss and develop responses to to recongnized literary works, as well as developing criteria for each volume's content and design. The class will include the evaluation and selection of fiction, nonfiction, poetry and visual art submissions to The Oval. Students are required to keep a reading journal, and compile a portfolio of writing exercises, responses to texts and critiques of published works.
- **CRWR 291 - Special Topics**
  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.
- **CRWR 310 - Intermediate Fiction Workshop**
  Credits: 3. (R-9) Offered autumn and spring. Prereq., completion of CRWR 210A with a "B" average or better. An intermediate fiction writing workshop. Students will be expected to finish 3 or 4 substantial stories for the course. Although some outside material will be considered, the primary emphasis will be analysis and discussion of student work. Course Attributes: English Course

- CRWR 311 - Intermediate Poetry Workshop

  Credits: 3. (R-9) Offered autumn and spring. Prereq., Completion of CRWR 211A with a "B" average or better. An intermediate workshop involving critical analysis of students' work-in-progress as well as reading and discussion of poems in an anthology. Numerous directed writing assignments, experiments, exercises focused on technical considerations like diction, rhythm, rhyme, and imagery. Course Attributes: English Course

- CRWR 312A - Interm Nonfiction Workshop

  Credits: 3. (R-9) Prereq., completion of CRWR 212A or CRWR 210A with a "B" average or better. An intermediate nonfiction workshop. Students read and respond to model essays, in addition to creating and revising original essays for workshop review. Assignments and exercises focus on writing craft and research techniques. Course Attributes: English Course
  Expressive Arts Course (A)

- CRWR 320 - The Art and Craft of Revision

  Credits: 3. (R-6) Offered spring. Prereq., CRWR 210A or consent of instr. An intermediate writing course focused on revision of prose works-in-progress and study of narrative, plot, and editing at the language level. Materials include craft manuals, contemporary and classic examples, and student manuscripts.

- CRWR 322 - Techniques of Modern Essay

  Credits: 3. Offered intermittently. Prereq., consent of instr. Study of various forms of nonfiction essay, such as memoir, personal essay, travel and nature writing, profile and literary journalism. Assignments and exercises focus on writing craft and research techniques.

- CRWR 391 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

- CRWR 398 - Internship

  Credits: 1 TO 3. (R-9) Offered intermittently. Prereq., consent of faculty supervisor, department chair, and the Internship Services Office. Course Attributes: Internships/Practicums
  English Course

- CRWR 410 - Advanced Fiction Workshop

  Credits: 2 TO 3. (R-6) Offered autumn and spring. Prereq., consent of instr. An advanced writing workshop in which student manuscripts are read and critiqued. Rewriting of work already begun (in CRWR 310 classes) will be encouraged. Course Attributes: English Course

- CRWR 411 - Advanced Poetry Workshop

  Credits: 2 TO 3. (R-6) Offered autumn and spring. Prereq., consent of instr. An advanced writing workshop involving critical analysis of students' work-in-progress, as well as reading and discussion of poems by established poets. Discussions will focus on structure and stylistic refinement, with emphasis on revision. Different techniques, schools and poetic voices will be encouraged. Frequent individual conferences. Course Attributes: English Course

- CRWR 412 - Advanced Nonfiction Workshop

  Credits: 3. (R-6) Offered autumn and spring. Prereq., consent of instr. An advanced creative writing workshop focused primarily on reading and writing nonfiction; some classes may focus on personal essay, narrative nonfiction or short forms. Students complete two substantial essays. Course Attributes: English Course

- CRWR 425 - Storytelling

  Credits: 3. This course is open to both undergraduate and graduate students, and is not limited to English majors. In-class exercises and out-of-class assignments are designed to help students identify, develop, and demonstrate effective narrative practices in their chosen fields. Students learn to recognize and identify unifying themes, motifs, and ideas in literature and oral stories. Students will read, write, edit and present stories to the class, as well as providing a critique of their peers' work.

- CRWR 491 - Special Topics

  Credits: 1 TO 6. (R-6) Offered Intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

- CRWR 492 - Independent Study
  Credits: 1 TO 3. (R-9) Offered every term. Prereq., consent of instr. and department chair, and junior or senior standing. Special projects in creative writing. Only one 492 may be taken per semester. Course Attributes: English Course
- CRWR 496 - Service Learning
  Credits: 1 TO 3. (R-9) Offered every term. Prereq., consent of instr. and department chair, and junior or senior standing. Special projects in creative writing. Only one 496 may be taken per semester. Course Attributes: Service Learning/Volunteer English Course
- CRWR 510 - Fiction Workshop
  Credits: 1 TO 15. (R-15) Offered autumn and spring. Prereq., consent of instr. Level: Graduate Course Attributes: English Course
- CRWR 511 - Poetry Workshop
  Credits: 1 TO 15. (R-15) Offered autumn and spring. Prereq., consent of instr. Level: Graduate Course Attributes: English Course
- CRWR 512 - Nonfiction Workshop
  Credits: 1 TO 15. (R-15) Offered autumn and spring. Prereq., consent of instr. A creative writing workshop focused primarily on personal essay and narrative nonfiction. Attention given to writing and publishing professional magazine essays. Students complete two substantial essays. Level: Graduate Course Attributes: English Course
- CRWR 513 - Techniques of Nonfiction
  Credits: 1 TO 6. (R-6) Offered once every 2 years. Prereq., consent of instr. Study of form, technique and style in contemporary nonfiction. Level: Graduate
- CRWR 514 - Techniques of Modern Fiction
  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Intensive reading of contemporary prose writers. Level: Graduate Course Attributes: English Course
- CRWR 515 - Traditional Prosody
  Credits: 3. Offered intermittently. Prereq., consent of instr. Intensive practice and readings in prosodic and other poetic techniques. Level: Graduate Course Attributes: English Course
- CRWR 516 - Topics in Creative Writing
  Credits: 3. (R-9) Offered intermittently. Creative Writing faculty explore readings in their genres of specialty. Each professor chooses the focus, reading list, and assignments for the course. Level: Graduate Course Attributes: English Course
- CRWR 595 - Special Topics
  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate Course Attributes: English Course
- CRWR 596 - Graduate Independent Study
  Credits: 1 TO 9. (R-9) Offered every term. Prereq., consent of instr. and Associate Chair. Special projects in creative writing. Only one 596 permitted per semester. Level: Graduate Course Attributes: Independent Study English Course
- CRWR 598 - Internship
  Credits: 1 TO 6. (R-+) Offered intermittently. Prereq., consent of faculty supervisor, department chair, and the Internship Services Office. Level: Gradaute
- CRWR 599 - Thesis
  Credits: 1 TO 12. (R-12) Offered every term. Preparation of a thesis or manuscript based on research for presentation and/or publication. Level: Graduate Course Attributes: English Course

English - Linguistics

Back to Top

- ENLI 465 - Structure of Eng for Tchrs

Credits: 3. Offered intermittently. Same as LING 465. The development of the English language from a historical perspective contrasted with the phonological and grammatical structure of English from a modern linguistic point of view, specifically designed for teachers. Course Attributes: English Course

English as a Second Language

Back to Top

- ENSL 195 - Special Topics
  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

English - English Teaching

- ENT 296 - Independent Study
  Credits: 1 TO 3. (R-9) Offered intermittently. Prereq., consent of instr. and department chair. Special projects in English teaching. Only one 296 may be taken per semester. Course Attributes: English Course.
- ENT 395 - Special Topics
  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course
- ENT 398 - Internship
  Credits: 1 TO 3. Offered intermittently. Prereq., consent of faculty supervisor, department chair, and the Internship Services office. Extended classroom experience which provides practical application of classroom learning during placements off campus. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: English Course Internship graduation limit 6
- ENT 439 - Studies in Young Adult Lit
  Credits: 3. Offered autumn. Reading of representative texts covering the history, genres, authors, and themes of literature for students in middle school and high school. Course Attributes: English Course
- ENT 440 - Teaching Writing
  Credits: 3. Offered autumn and spring. Prereq. or coreq., EDU 202. Emphasis on teaching writing in grades 5-12. Research about development and maturity of writers, overview of schools of writing/history of writing instruction, strategies for teaching writing as a process, elements of writing craft, criteria for assessing and responding to writing, peer-coaching methods, writing/reading workshops, the role of grammar in improving writing, writing/reading connections, assignment characteristics, and grading practices. Required of students pursuing secondary English major and minor teaching licenses. Course Attributes: English Course
- ENT 441 - Tchg Rdng & Literature
  Credits: 3. Offered spring. Prereq. or Coreq., ENT 439, EDU 395. Emphasis on various approaches to teaching reading and literature in grades 5-12. Research about the development and maturity of readers, strategies for teaching reading comprehension and vocabulary, strategies for diagnosing reading abilities and criteria for reading assessment, reading workshops/literature circles. Emphasis on various approaches to teaching literature: genre, inquiry, thematic, chronological and interdisciplinary. Includes techniques for developing responses to fiction, nonfiction, prose, poetry, film and other media. Focus on the design of lesson plans and curriculum using traditional/classic, contemporary, young adult, and multicultural literature in grades 5-12. Required of students pursuing secondary English major and minor teaching licenses. Course Attributes: English Course
- ENT 442 - Tchg Oral Lang & Media Lit
  Credits: 3. Offered autumn and spring. Prereq. or coreq.., LING 465, EDU 395. Emphasis on preparation, implementation, and evaluation of teaching strategies and materials in grades 5-12.

Includes learning objectives, teaching and learning styles, unit plans, print and non-print media, and creative drama. Explores student-centered curriculum, with emphasis on developmental abilities in speaking, listening and viewing, and multigenre/multimodal communication. Required of students pursuing secondary English major and minor teaching licenses. Course Attributes: English Course

- ENT 495 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

- ENT 496 - Independent Study

  Credits: 1 TO 3. (R-9) Offered every term. Prereq., consent of instr. and department chair, and junior or senior standing. Special projects in English teaching. Only one 496 may be taken per semester. Course Attributes: English Course

- ENT 542 - Theor/Pedagog of Rhet/Comp

  Credits: 3. Offered intermittently. Exploration of contemporary theories and practical strategies for teaching rhetoric and composition grades 5-16. Level: Graduate Course Attributes: English Course

- ENT 543 - Adv Tchg Strat Yng Adv Lit

  Credits: 3. Offered intermittently. Selecting, reading, teaching, and evaluating young adult literature. Design of thematic units with emphasis on students' responses to literature. Presentation of multicultural literature, gender inquiry, social justice, censorship, and media issues. Level: Graduate Course Attributes: English Course

- ENT 544 - Creative Drama English Class

  Credits: 3. Offered intermittently. Designing, teaching and evaluating creative drama in the English language arts classroom. Emphasis on using creative drama as a learning strategy to teach literature and all the language arts. Level: Graduate Course Attributes: English Course

- ENT 545 - Theor/Pedagog of Literacy

  Credits: 3. Offered intermittently. Exploration of contemporary theories and practical strategies for teaching reading, literacy grades 5-16. Level: Graduate Course Attributes: English Course

- ENT 546 - Literary Crit for Teachers

  Credits: 3. Offered intermittently. Emphasis on a variety of theories which focus on reader responses. Application of theories to different genres. Level: Graduate Course Attributes: English Course

- ENT 547 - Adv Tchg Strat Wrtg & Rdg

  Credits: 3. Offered intermittently. Current research and best practices in teaching writing and reading in all content areas. Emphasis on writing and reading processes, workshops, conferences and portfolios. National and state standards, curriculum, and assessments in writing and reading are addressed. Level: Graduate Course Attributes: English Course

- ENT 548 - Portfolios and Assessment

  Credits: 3. Offered intermittently. Selecting, designing, and evaluating informal and formal assessments in English Language Arts. Exploration of portfolios as assessment strategies that align standards curriculum and instruction. Focus on content and performance standards, evaluation criteria and rubrics, and role of reflection in teaching and learning. Level: Graduate Course Attributes: English Course

- ENT 550 - Montana Writing Project

  Credits: 9. Offered summer. Prereq., special application and consent of director. Intensive program designed to increase the effectiveness of the teaching and learning of writing in all levels of education in Montana. For graduate students, preK-120 teachers in all content areas and university level educators. Level: Graduate Course Attributes: English Course

- ENT 552 - MWP Leadership Training

  Credits: 7. Offered intermittently. Prereq., special application, and consent of director. Intensive leadership training for Montana Writing Project teacher-consultants to organize professional development institutes and to developing curriculum and providing mentorship through MWP. For graduate students, preK-20 teachers in all content disciplines and university level educators. Level: Graduate Course Attributes: English Course

- ENT 553 - Native Voices & Writing

  Credits: 7. Offered summer at Blackfeet Community College. Focus is on writing across the curriculum in the context of participants' teaching assignments alongside the essential component of Niitsitapi (Blackfeet) culture and ways of knowing. Participants develop a theoretical articulation of what it means to write in their disciplinary area(s) of endorsement and with predominantly Blackfeet students. Participants design and critique writing curriculum and instruction in their disciplines with attention to theory and research on writing in the content areas and Blackfeet ways of knowing. Level: Graduate Course Attributes: English Course

- ENT 556 - IEFA & Writing

  Credits: 3. Offered intermittently in partnership with Montana Writing Project and local school districts. Prereq., consent of instr. This course assumes that writing is an ideal vehicle for moving forward with implementation of Montana law Indian Education for All (IEFA) in K-12 schools. The primary goal of this course is to help teachers of all grade levels and content areas develop the knowledge, resources, and confidence to enable them to integrate IEFA smoothly into their existing literacy curriculum. Level: Graduate Course Attributes: English Course

- ENT 557 - The Holocaust and IEFA

  Credits: 3. Prereq., special application and Consent of Instr. This course, intended for K-12 and college/university educators, is a collaboration between Montana Writing Project and the Holocaust Educators' Memorial to examine curricula and pedagogies for linking Holocaust Education and Indian Education for All through writing and literacy education. Level: Graduate Course Attributes: English Course

- ENT 593 - Professional Paper

  Credits: 1 TO 4. (R-4) Offered every term. Prereq., consent of instr. Pedagogical paper for the Master of Arts in English (Teacher Option). Credit not allowed toward any other degree. Level: Graduate Course Attributes: English Course

- ENT 595 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate Course Attributes: English Course

- ENT 596 - Graduate Independent Study

  Credits: 1 TO 9. (R-9) Offered every term. Prereq., consent of instr. and department chair. Special projects in English teaching. Only one independent study permitted per semester. Level: Graduate Course Attributes: English Course

- ENT 598 - Internship

  Credits: 1 TO 3. (R-9) Offered intermittently. Prereq., consent of faculty supervisor, department chair, and the Internship Services office. Extended classroom experience which provides practical application of classroom learning during placements off campus. Level: Graduate Course Attributes: English Course

Film

Back to Top

- FILM 103L - Introduction to Film

  Credits: 3. Offered every term. The history and development of the film medium. Emphasis on critical analysis of selected classic or significant films. Course Attributes: Lit & Artistic Studies (L)

- FILM 191 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- FILM 291 - Special Topics

  Credits: 1 TO 6. (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- FILM 300 - History of Film

  Credits: 3. Offered every year. Prereq., FILM 103L, LIT 270L. Survey of film history.

- FILM 320 - Shakespeare and Film

Credits: 3. Same as LIT 327. Offered once a year. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities in relation to film. Course Attributes: Writing Course-Intermediate

- FILM 327 - Film Genres

  Credits: 3. (R-9) Offered every other year. Prereq. FILM 103L. Intensive study of central works within one major film genre.

- FILM 363 - The French Cinema

  Credits: 3. Offered intermittently. An historical, aesthetic, and critical survey of the French cinema, from its beginnings in 1895 through the contemporary cinema (Muet, classical, Realism, Nouvelle Vogue, etc.) with an introduction to contemporary film criticism. Students taking the course for French credits are required to do research, reading, and writing in the French language.

- FILM 365 - Latin Amer Civ Thru Lit & Film

  Credits: 3. Offered in autumn odd-numbered years. The development of the traditional society of Latin American civilization through the interaction of European, Indian and African elements.

- FILM 381 - Studies in the Film

  Credits: 3. (R-9) Offered autumn and spring. Prereq., FILM 103L or consent of instr. Studies in genres, directors, movements, problems, etc.

- FILM 391 - Special Topics

  Credits: 1 TO 9. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- FILM 392 - Independent Study

  Credits: 1 TO 6. (R-6) Offered Intermittently. Consent of Instructor Required.

- FILM 447 - Film Theory

  Credits: 3. Offered yearly. This course examines key approaches to film theory and criticism, and the theoretical roots of each. Classic and contemporary films will be assessed in the light of the theories covered.

- FILM 481 - Advanced Studies in Film

  Credits: 3. (R-9) Offered every other year. Studies in film aesthetics, politics of film, international cinema and comparative film analyses.

- FILM 484 - Film Directors

  Credits: 3. (R-9) Offered every year. Prereq. FILM 103L. Intensive study of the life and work of one major film director.

- FILM 491 - Special Topics

  Credits: 1 TO 9. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics

- FILM 492 - Independent Study

  Credits: 1 TO 9. (R-9) Offered every term. Pereq., consent of instr. and department chair, and junior or senior standing. Special Projects in film. Only one 492 may be taken per semester.

- FILM 495 - Practicum

  Credits: 1 TO 6. R-6

- FILM 596 - Independent Study

  Credits: 1 TO 9. (R-9) Offered every term. Prereq., consent of instr. and department chair. Special projects in film. Level: Graduate

Irish

Back to Top

- IRSH 101 - Elementary Irish/Gaelic

  Credits: 3. Offered autumn or spring. Same as ENIR 101. This course represents an introduction to modern Irish in both its spoken and written forms: basic principles of grammar and sentence structure are covered. Emphasis is placed on the application of these principles in every-day

situations. This course is housed in the English Department. The GenEd Foreign Language requirement can be fulfilled by successful completion of 101, 102 and 103.

- IRSH 102 - Elementary Irish II

  Credits: 3. Offered autumn or spring. Same as ENIR 102. The primary objective of this course is to build on the foundations laid in Elementary Irish I. Students will expand their vocabulary with a special focus on verbs; they will also engage new themes that demand a corresponding increase in their store of nouns, adjectives, idioms and expressions. This course is housed in the English Department. The GenEd Foreign Language requirement can be fulfilled by successful completion of 101, 102 and 103.

- IRSH 103 - Elementary Irish III

  Credits: 3. Offered autumn or spring. Same as IRSH 103. The primary objective of this course is to build on the foundations laid in Beginning Irish I. Students will expand their vocabulary with a special focus on verbs; they will also engage new themes that demand a corresponding increase in their store of nouns, adjectives, idioms and expressions. The GenEd Foreign Language requirement can be fulfilled by successful completion of 101, 102 and 103.

- IRSH 201 - Intermediate Irish I

  Credits: 3. Offered spring semester. Prereq. ENIR 101, 102, and 103 or their equivalent from another university. Students will continue their study of the verbs; engage more complex syntax and grammatical constructions; and consult the prose and poetry of the written and oral literary traditions. For proficiency equal to the 202-level, students must take the five semester sequence (101, 102, 103, 201, & 202) of Irish language study.

- IRSH 202 - Intermediate Irish II

  Credits: 3. Offered fall semester. Prereq. IRSH 201 or its equivalent from another university. Students will expand their knowledge of Irish language verbs: they will study the five declensions of the nouns; and acquire the vocabulary and language necessary to engage more abstract ideas and topical issues on an intellectual level. For proficiency equal to the 202-level, students must take the five semester sequence (101, 102, 103, 201, & 202) of Irish language study.

- IRSH 345L - Literature in the Irish Lang

  Credits: 3. Offered intermittently. This course acknowledges Irish as the oldest documented vernacular in Europe and its literature as a voice that is over 1500 years old. Examines the literary response of Gaelic Ireland to invasion, conquest, and colonization as articulated by its literature. Course Attributes: Lit & Artistic Studies (L)

- IRSH 360 - Irish/N Irish Literature

  Credits: 3. Offered intermittently. Examines (in English) selection of fiction, poetry, drama, film, and music from the Irish and/or Northern Irish literary traditions. Students will seek to understand how artists respond to the burdens of history, identity, and political conflict, and how they articulate the possibilities afforded by Ireland's changing position in the world.

- IRSH 380 - Topics in Irish Studies

  Credits: 3. Offered intermittently. A rotating variety of special topics in Irish Studies, including Irish and Irish-American cinema, major Irish/N. Irish authors, Irish cultural studies, and transatlantic and comparative studies. Course Attributes: Writing Course-Intermediate

- IRSH 391 - Special topics

  Credits: 1 TO 6. (R-9) Offered intermittently. Experimental offerings of visiting professors, new courses, or one-time offerings of current topics;

- IRSH 492 - Independent Study

  Credits: 1 TO 3. (R-9) Offered intermittently. Experimental offerings of visiting professors, new courses, or one-time offerings of current topics;

English - Literature

Back to Top

- LIT 110L - Intro to Lit

  Credits: 3. Offered every term. Study of how readers make meaning of texts and how texts influence readers. Emphasis on interpreting literary texts: close reading, critical analysis and effective writing. Course Attributes: English Course Lit & Artistic Studies (L) Writing Course-Intermediate

- LIT 120L - Poetry

  Credits: 3. Offered every term. An introduction to the techniques of reading and writing about poetry with emphasis on the lyric and other shorter forms. Course Attributes: English Course Lit & Artistic Studies (L) Writing Course-Intermediate

- LIT 191 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

- LIT 201 - Intro to Literary Studies

  Credits: 3. Offered every term. Introduction to the field of literary studies, to the conventions of literary analysis, and to the literature option for English majors. Reading, writing, and research skills will be stressed, along with interpretative approaches to major genres within the field.

- LIT 202L - The Environmental Imagination

  Credits: 3. Course is designed to introduce students to the many discourses of nature. In this course we will approach "natural history" as a complex literary genre grounded in personal experience of the "more-than-human" world (in David Abram's now ubiquitous phrase). While the study of natural history writing has historically focused on authors like Gilbert White, Henry David Thoreau, John Muir, and John Burroughs (as prominent practitioners of the personal narrative essay that explores the natural world), a more thorough understanding of the genre requires consideration of the role race, class, and gender play in shaping discourses of nature. Further, consideration of non-Anglo-American traditions (including, for example, a range of Native American and Asian "literary" practices) expands our understanding of those traditions as it allows us to see the Anglo-American tradition in useful perspective. Course Attributes: Lit & Artistic Studies (L) Writing Course-Intermediate

- LIT 210L - American Lit I

  Credits: 3. Offered every term. Representative texts from the pre-colonial period through the Civil War. Course Attributes: English Course Lit & Artistic Studies (L) Writing Course-Intermediate

- LIT 211L - American Lit II

  Credits: 3. Offered every term. Representative texts from the Civil War to the present. Course Attributes: English Course Lit & Artistic Studies (L) Writing Course-Intermediate

- LIT 220L - Brit Lit: Med to Renaissance

  Credits: 3. Offered every term. Representative texts from the Anglo-Saxon period through the Renaissance. Course Attributes: Literary & Artistic Stds Crse Writing Course-Intermediate

- LIT 221L - Brit Lit: Enlightenment to Rom

  Credits: 3. Offered every term. Representative texts from the seventeenth through the eighteenth century. Course Attributes: Lit & Artistic Studies (L) Writing Course-Intermediate

- LIT 222L - Brit Lit: Victorian to Contemp

  Credits: 3. Offered every term. Representative texts from the early nineteenth century to the present. Course Attributes: Lit & Artistic Studies (L) Writing Course-Intermediate Democracy and Citizenship (Y)

- LIT 270L - Film & Lit

  Credits: 3. (R-6) Offered intermittently. Studies of the relationship between film and literature. Topics vary. Course Attributes: English Course Lit & Artistic Studies (L)

- LIT 280L - Ecology of Literature

  Credits: 3. Literary study of nature writing and other genres introducing an ecocritical perspective, with revolving Anglophone texts. Course Attributes: Lit & Artistic Studies (L)

- LIT 291 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- LIT 300 - Literary Criticism

  Credits: 3. Offered every term. Prereq. or coreq., 12 credits of lower-division English courses. Study of various literary theories and their application to literary texts. Course Attributes: English Course Writing Course-Advanced

- LIT 301 - Studies in Literary Forms

  Credits: 3. (R-9) Offered intermittently. Prereq., LIT 300 or consent of instr. Reading of various authors from different literary periods and cultures working in the same mode of composition (courses offered under this rubric may include Literature of Place, Modern Drama, 19th Century Fiction, 20th Century Fiction, Lyric Poetry, Science Fiction, Autobiography; less frequently, Travel Literature, Popular Fiction, Epic, Tragedy, Satire, Romance, Comedy). Course Attributes: English Course

- LIT 304 - U.S. Writers of Color

  Credits: 3. Offered intermittently. Prereq., LIT 300 or consent of instr. Selected readings from African American, Asian American, Chicano/a, Latino/a, and Native American literatures. Course Attributes: Writing Course-Advanced

- LIT 305 - Lit by & About Native Amer

  Credits: 3. Offered autumn. Prereq., three credits of lower-division LIT courses and NASX 105H or 235X. Same as NASX 340. Selected readings from Native American literature with special emphasis on the literature of writers from the Rocky Mountain west. Course Attributes: English Course

- LIT 314 - The American Novel

  Credits: 3. Offered intermittently. Prereq., LIT 210L or 211L and prereq. or co-req., LIT 300. Examination of a selection of American novels in their historical, cultural, and literary contexts. Exploration of literary movements such as realism, naturalism, modernism, and postmodernism. Discussion of critical theories and application to the texts. Course Attributes: English Course Writing Course-Advanced

- LIT 315 - Voices of the Am Renaissance

  Credits: 3. Offered intermittently. Prereq., LIT 210L or 211L and LIT 300 or consent of instr. Perspectives on antebellum Native American, African American, and gender issues. Study of the poetry of Walt Whitman and Emily Dickinson in light of these three perspectives. Course Attributes: English Course

- LIT 316 - Topics in Postcolonial Lit

  Credits: 3. Offered intermittently. Prereq., LIT 210L or 211L and LIT 300. Course Attributes: English Course Writing Course-Advanced

- LIT 327 - Shakespeare

  Credits: 3. Offered autumn and spring. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities. Course Attributes: English Course Writing Course-Advanced

- LIT 331 - Major Author/s

  Credits: 3. (R-9) Offered intermittently. Prereq., LIT 300 or consent of instr. Intensive study of the life and works of one author writing in English (courses offered under this rubric have included Chaucer, Milton, Faulkner, Joyce, Twain; less frequently, Conrad, Hemingway, Blake, Woolf, D.H. Lawrence, Welty). Course Attributes: English Course

- LIT 332 - Topics in Modernism

  Credits: 3. Offered intermittently. Prereq., LIT 300 or consent of instr. An introductory study of European and American modernism. Detailed exploration of major modernist novels and/or poems in relation to broader cultural and social contexts. Course Attributes: English Course

- LIT 342 - Montana Writers

  Credits: 3. Offered intermittently. Prereq., LIT 210L or 211L. Examination of poems, stories, and novels by or about Montanans and the treatment and representation of race, place, class, gender, sexuality, and identity in Montana. Exploration of the myths and realities of Montana and the American West. Course Attributes: Writing Course-Advanced

- LIT 343 - African American Lit

  Credits: 3. Offered intermittently. Prereq., LIT 300 or consent of instr. Selected works by African-American authors. Course may define a narrowed focus such as poetry, women writers, etc. Course Attributes: English Course Writing Course-Advanced

- LIT 344 - Asian American Literature

  Credits: 3. This course introduces both a variety of writings by Asian North American authors and major critical issues concerning the production and reception of Asian American texts, with an

emphasis on the relation between literary forms and the Asian American socio-historical context, and on the historical formation of Asian American identities.

- LIT 349L - Medieval Lit

  Credits: 3. Offered alternate years. Prereq., LIT 300 or consent of instr. Exploration of literature from the medieval period, focusing on the major cultural and intellectual influences on the emergence of vernacular writing. Topics will vary, but will regularly include Anglo-Saxon literature and Middle English literature (excluding Chaucer). Course Attributes: English Course Lit & Artistic Studies (L)

- LIT 350L - Chaucer

  Credits: 3. Offered alternate years. Critical reading of Chaucer's masterpiece, the Canterbury Tales, with attention to Chaucerian irony, the author's place in literary history, and issues in Chaucer studies. Course Attributes: English Course Lit & Artistic Studies (L)

- LIT 351 - Donne & His Followers

  Credits: 3. Offered alternate years. Prereq., LIT 300 or consent of instr. Close study of John Donne and other early 17th century religious poets within the context of Renaissance intellectual history. Course Attributes: English Course

- LIT 353L - Milton

  Credits: 3. Offered alternate years. Prereq., LIT 300 or consent of instr. Selected study of poetry and prose of Milton. Course Attributes: Lit & Artistic Studies (L) Writing Course-Advanced

- LIT 355 - British Romanticism

  Credits: 3. Offered alternate years. Prereq. or co-req., LIT 300. Introduction to the major texts, themes, and authors of British literature from 1790-1815, focusing on poets such as Blake, Barbauld, Wordsworth, Coleridge, and P.B. Shelley but attending also to prose writers from Austen to Mary Shelley. Course Attributes: English Course

- LIT 363 - Modern Poetry

  Credits: 3. Offered alternate years. Prereq., LIT 300 or consent of instr. Survey of modern poetry in English beginning with Emily Dickinson and Walt Whitman and moving toward the present, centering on modernist poets. Course Attributes: English Course

- LIT 369 - Short Fiction

  Credits: 3. Offered intermittently. Prereq., LIT 300 or consent of instructor. Study of selected short stories and novellas from mid-19th century to the present.

- LIT 370 - Science Fiction

  Credits: 3. Offered intermittently. Prereq., LIT 300 or consent of instr. Study of the science fiction genre from its pulp magazine beginnings in the 1920s to the present. Course Attributes: English Course

- LIT 373 - Lit & Environment

  Credits: 3. Offered autumn. Prereq., LIT 210L or 211L (ENLT 224L or 225L) and LIT 300 (ENLT 301) or consent of instr. Study of major texts and issues in American nature writing. Course Attributes: English Course

- LIT 375 - Literary History

  Credits: 3. (R-9) Offered intermittently. Prereq., LIT 300 or consent of instr. Study of influences on and innovations in the works of various authors within a particular literary historical period in England or America (e.g. British Renaissance, 18th century, Victorian, British Modern, American Puritanism, American Realism and Naturalism; 17th century). Course Attributes: English Course

- LIT 376 - Lit & Oth Disciplines

  Credits: 3. (R-9) Offered intermittently. Prereq., nine credits in LIT or LSH or consent of instr. Selected works of literature studied in conjunction with works of art, music, religion, philosophy, or another discipline (e.g. Film and Literature, Modernism, Literature and Science, Bible as Literature, Song). Course Attributes: English Course Writing Course-Advanced

- LIT 378L - Gay and Lesbian Studies

  Credits: 3. Offered alternate years. Prereq., LIT 300 or consent of instr. Review of the history of the gay and lesbian movement in the twentieth century as a basis for understanding the political, social, and sexual issues that influenced homoerotic cultural representation in plays, films, and

novels. Course Attributes: English Course Lit & Artistic Studies (L) Writing Course-Upper-Division

- LIT 379L - Gender & Sexuality in Eng. Fic

  Credits: 3. Offered alternate years. Same as LSH 327L. Major 20th century novels and short stories written in English in different parts of the world and how these texts explore changing concepts of gender and sexuality. Course Attributes: English Course Literary & Artistic Stds Crse

- LIT 380 - Literary Approaches to Drama

  Credits: 3. This course introduces students to dramatic literature, with an emphasis on dramatic elements and devices, and the continuity in the history/tradition of drama. Topics vary, determined by the instructor's special interests, and might focus on either US, British, or global drama.

- LIT 391 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

- LIT 398 - Internship

  Credits: 1 TO 6. Offered intermittently. Prereq., consent of faculty supervisor, department chair, and the Internship Services office. Extended classroom experience which provides practical application of classroom learning during placements off campus. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- LIT 402 - Literature in Place

  Credits: 3. This course gives students a set of advanced learning opportunities to engage with Anglophone texts on the general theme of nature and culture, applying an ecocritical lens to extended literary analysis. Drawing from various periods and from various trans-Atlantic national literatures, the course is designed to focus on the emerging critique of nature and culture that questions foundational structures of epistemology and economy, animate and inanimate, civilization and wilderness.

- LIT 420 - Critical Theory

  Credits: 3. (R-9) Offered autumn or spring. Prereq., LIT 300 and six credits in literature courses numbered 300 or higher or consent of instr. Study and application of one or more theoretical approaches to interpreting texts (e.g., aesthetic post-structural, new historicist, classical, Renaissance, Romantic, narrative, psychoanalytic, formalist, neo-Marxist, feminist, gender, cultural studies and reader-response theory). Course Attributes: English Course

- LIT 421 - History of Criticism & Theory

  Credits: 3. Offered autumn or spring. Prereq., LIT 300 and six credits in literature courses numbered 300 or higher or consent of instr. Survey of the historical development of critical theories which shaped ways of reading and writing from Plato and Aristotle to the present. Course Attributes: English Course

- LIT 422 - Ecocritical Theory & Practice

  Credits: 3. Prereq., or coreq., LIT 300. This course surveys the developing field of ecocriticism, introducing students to the major issues and methodologies entailed in the study of literature and the environment.

- LIT 430 - Studies in Comparative Lit

  Credits: 3. (R-9) Offered intermittently. Prereq., consent of instr. Same as LSH 342. The study of important literary ideas, genres, trends and movements. Credit not allowed for the same topic in more than one course numbered 430, LSH 342. Course Attributes: English Course

- LIT 491 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

- LIT 492 - Independent Study

  Credits: 1 TO 3. (R-9) Offered every term. Prereq., consent of instr. and department chair, and junior or senior standing. Special projects in literature. Only one independent study may be taken per semester. Consent must be obtained prior to enrollment. Course Attributes: English Course

- LIT 494 - Seminar: Lit Capstone

  Credits: 3. (R 9) Offered autumn and spring. Prereq., LIT 300 and nine credits in literature courses numbered higher than 300. Required for completing the English literature option, this seminar will allow students to conduct advanced studies in literary figures and topics chosen by faculty to engage a broad range of interests. A long research paper is required. Course Attributes: English Course Writing Course-Advanced

- LIT 499 - Thesis/capstone: Honors

  Credits: 1 TO 9. (R-9) Offered intermittently. Prereq., consent of chair. Preparation of a thesis or manuscript based on research for presentation and/or publication. Course Attributes: English Course

- LIT 500 - Intro to Graduate Studies

  Credits: 3. Offered autumn. Instruction in advanced literary and cultural theory, library and research skills, and academic genres. Level: Graduate Course Attributes: English Course

- LIT 502 - Topics in Ecocriticism

  Credits: 3. This course is a central requirement for the English Department's graduate option in Ecocriticism. The course will vary by topic, but will link introductions to ecocritical theory with practice as it models how to apply ecocritical theory to the study of literature. Each offering will explore the interconnections between nature and culture, through the cultural artifacts language and literature. Although changing with the topic, in most cases the course considers the role race, class, and gender play in shaping discourses of nature. Further, consideration of non-Anglo-American traditions will be featured for many offerings. Level: Graduate

- LIT 520 - Sem in British Lit

  Credits: 3. (R-9) Offered every autumn and spring. Prereq., graduate status or consent of instructor. Topics will vary. Level: Graduate Course Attributes: English Course

- LIT 521 - Sem American Lit

  Credits: 3. (R-9) Offered autumn and spring. Prereq., graduate status or consent of instr. Topics will vary. Level: Graduate Course Attributes: English Course

- LIT 522 - Sem Comparative Lit

  Credits: 3. (R-9) Offered intermittently. Same as MCLG 522. Prereq., graduate status or consent of instructor. Topics will vary. Level: Graduate Course Attributes: English Course

- LIT 524 - Nature, Language and Politics

  Credits: 3. Offered intermittently. Investigation of environmental, social and political thought from the perspective of contemporary language theory. Level: Graduate Course Attributes: English Course

- LIT 595 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate Course Attributes: Internships/Practicums

- LIT 596 - Graduate Independent Study

  Credits: 1 TO 9. (R-9) Offered every term. Prereq., consent of instr. and chair. Special projects in literature. Only one 596 permitted per semester. Consent must be obtained prior to enrollment. Level: Graduate Course Attributes: Independent Study

- LIT 598 - Internship

  Credits: 1 TO 9. (R-9) Offered intermittently. Prereq., consent of faculty supervisor, department chair, and the Internship Services office. Extended classroom experience which provides practical application of classroom learning during placements off campus. Level: Graduate Course Attributes: Internships/Practicums

- LIT 599 - Thesis

  Credits: 1 TO 6. (R-6) Offered every term. Preparation of a thesis or manuscript based on research for presentation and/or publication. Level: Graduate Course Attributes: English Course

Writing

Back to Top

- WRIT 101 - College Writing I

  Credits: 3. UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit). Course Attributes: Writing Course-Introductory

- WRIT 191 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

- WRIT 198 - Coop Education Experience

  Credits: 1 TO 12. Offered intermittently. Prereq., consent of department. Extended classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- WRIT 201 - College Writing II

  Credits: 3. Offered autumn and spring. Prereq., placement or C or better in WRIT 101. MUSWA at or above 5.5, SAT/ACT essay at or above 11, a SAT writing section score at or above 700 or a Combined English/Writing portion of the ACT at or above 32. Designed for first year students with advanced writing ability and students who seek a lower-division writing course. Offers instruction in rhetorical reading and writing, particularly the study and practice of written argumentation in different academic and civic contexts. Course Attributes: Writing Course-Intermediate Writing Course-Introductory

- WRIT 391 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

  Credits: 1 TO 12. Offered intermittently. Prereq., consent of department. Extended classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation. Course Attributes: Internships/Practicums

- WRIT 491 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Course Attributes: English Course

- WRIT 492 - Independent Study

  Credits: 1 TO 3. (R-9) Offered every term. Prereq., consent of instr. and chair, and junior or senior standing. Special projects in expository writing. Only one 496 may be taken per semester. Course Attributes: English Course

- WRIT 540 - Tchg Coll Levl Composition

  Credits: 3. Offered autumn. Restricted to graduate students teaching expository writing at The University of Montana. Theory and pedagogy of teaching college composition are emphasized. Level: Graduate Course Attributes: English Course

- WRIT 595 - Special Topics

  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate

Course Attributes: Internships/Practicums

- WRIT 596 - Grad Independent Study
  Credits: 1 TO 3. (R-9) Offered every term. Prereq., consent of instr. and chair. Special projects in expository writing. Only one 596 may be taken per semester. Level: Graduate Course Attributes: Independent Study

Creative Writing

The Creative Writing program is predicated on the model of the workshop, and focuses on three areas of study: poetry, fiction, and nonfiction. Undergraduates who select the creative writing option fulfill some of the same requirements as those in literature, while also participating in a series of small writing workshops, gaining the techniques needed to craft poetry and/or prose that work towards artistic excellence. Graduate students pursuing an M.F.A. degree complete a series of writing workshops and seminars designed to develop their creative work and expand their understanding of literary technique. The Creative Writing faculty is augmented each year by visiting Hugo and Kittredge fellows. The program sponsors the graduate literary magazine, *CutBank*, now in its fourth decade of publishing works of poetry, prose and art. Additionally, undergraduate students have the opportunity to contribute to and edit their own literary magazine, *The Oval*.

Bachelor of Arts - English; Creative Writing Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 42

Required Cumulative GPA: 2.0

Note: Upon successful completion of the Pre-English requirements, students must declare the English major and choose a degree option. English majors with the option in Creative Writing must earn 42-60 of their total credits in Department of English courses.

Pre-English Core Courses

Rule: Complete six courses (18 credits) including an introductory Literature course, an introductory Creative Writing course, and British and American Literature surveys.

Note: Recommended English elective: another 200-level CRWR course, CRWR 115, 295, 320, or 491.

Minimum Required Grade: C

18 Total Credits Required

Introductory Literature course

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 110L - Intro to Lit Offered every term. Study of how readers make meaning of texts and how texts influence readers. Emphasis on interpreting literary texts: close reading, critical analysis and effective writing.	3 Credits
	LIT 120L - Poetry Offered every term. An introduction to the techniques of reading and writing about poetry with emphasis on the lyric and other shorter forms.	3 Credits

	LIT 201 - Intro to Literary Studies Offered every term. Introduction to the field of literary studies, to the conventions of literary analysis, and to the literature option for English majors. Reading, writing, and research skills will be stressed, along with interpretative approaches to major genres within the field.	3 Credits
Minimum Required Grade: C		3 Total Credits Required

British and American Literature surveys

Rule: Complete three courses (9 credits).

	Course	Credits
	LIT 210L - American Lit I Offered every term. Representative texts from the pre-colonial period through the Civil War.	3 Credits
	LIT 211L - American Lit II Offered every term. Representative texts from the Civil War to the present.	3 Credits
	LIT 220L - Brit Lit: Med to Renaissance Offered every term. Representative texts from the Anglo-Saxon period through the Renaissance.	3 Credits
	LIT 221L - Brit Lit: Enlightenment to Rom Offered every term. Representative texts from the seventeenth through the eighteenth century.	3 Credits
	LIT 222L - Brit Lit: Victorian to Contemp Offered every term. Representative texts from the early nineteenth century to the present.	3 Credits
Minimum Required Grade: C		9 Total Credits Required

Introductory Creative Writing course

Rule: Complete one course (3 credits).

Note: Students must earn a grade of "B" or higher in CRWR 210, 211, or 212 in order to progress to the corresponding upper-division CRWR workshop (CRWR 310, 311, and 312).

	Course	Credits
	CRWR 210A - Intro Fiction Workshop Offered intermittently. This beginning writing workshop emphasizes the reading, discussion, and revision of students' short fiction. Students will be introduced to the technical elements of writing fiction. No prior experience in writing short fiction required.	3 Credits

	CRWR 211A - Intro Poetry Workshop Offered intermittently. This beginning writing workshop focuses on the reading, discussion, and revision of students' poems. Students will study and use models of poetic techniques. No prior experience in writing poetry required.	3 Credits
	CRWR 212A - Intro Nonfiction Workshop A study of the art of nonfiction through reading and responding to contemporary nonfiction and the writing of original nonfiction works. Focus is on creative expression, writing technique and nonfiction forms. Students begin with writing exercises and brief essays, advancing to longer forms as the semester progresses.	3 Credits
Minimum Required Grade: C		3 Total Credits Required

English elective course

Rule: Complete one course (3 credits).

Note: Select any course (3 credits) from the course prefixes CRWR, ENIR (aside from 101-202), ENLI, FILM, LING, or LIT.

Upper Division Requirements

Rule: Complete three courses (9 credits).

Note: Please be aware of 300- and 400-level workshop pre-requisites: CRWR 310 - grade of "B" or higher in CRWR 210; CRWR 311 - grade of "B" or higher in CRWR 211; CRWR 312 - grade of "B" or higher in CRWR 210 or 212; CRWR 410, 411, and 412 - completion of 300-level workshop in the same genre and writing submission/consent of instructor. CRWR 310, 311, 312, 410, 411, and 412 each carry a repeatibility of 6 credits.

	Course	Credits
	CRWR 310 - Intermediate Fiction Workshop (R-9) Offered autumn and spring. Prereq., completion of CRWR 210A with a "B" average or better. An intermediate fiction writing workshop. Students will be expected to finish 3 or 4 substantial stories for the course. Although some outside material will be considered, the primary emphasis will be analysis and discussion of student work.	3 Credits
	CRWR 311 - Intermediate Poetry Workshop (R-9) Offered autumn and spring. Prereq., Completion of CRWR 211A with a "B" average or better. An intermediate workshop involving critical analysis of students' work-in-progress as well as reading and discussion of poems in an anthology. Numerous directed writing assignments, experiments, exercises focused on technical considerations like diction, rhythm, rhyme, and imagery.	3 Credits
	CRWR 312A - Interm Nonfiction Workshop (R-9) Prereq., completion of CRWR 212A or CRWR 210A with a "B" average or better. An intermediate nonfiction workshop. Students read and respond to model essays, in addition to creating and revising original essays for workshop review. Assignments and exercises focus on writing craft and research techniques.	3 Credits

	CRWR 410 - Advanced Fiction Workshop (R-6) Offered autumn and spring. Prereq., consent of instr. An advanced writing workshop in which student manuscripts are read and critiqued. Rewriting of work already begun (in CRWR 310 classes) will be encouraged.	2 To 3 Credits
	CRWR 411 - Advanced Poetry Workshop (R-6) Offered autumn and spring. Prereq., consent of instr. An advanced writing workshop involving critical analysis of students' work-in-progress, as well as reading and discussion of poems by established poets. Discussions will focus on structure and stylistic refinement, with emphasis on revision. Different techniques, schools and poetic voices will be encouraged. Frequent individual conferences.	2 To 3 Credits
	CRWR 412 - Advanced Nonfiction Workshop (R-6) Offered autumn and spring. Prereq., consent of instr. An advanced creative writing workshop focused primarily on reading and writing nonfiction; some classes may focus on personal essay, narrative nonfiction or short forms. Students complete two substantial essays.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Upper Division English Electives

Rule: Complete three courses (9 credits) of 300- or 400-level English electives.

Note: Please note that most of these courses carry pre-requisites.

Note: Select any three courses (9 credits) from the course prefixes FILM or LIT. All courses must be 300- or 400-level.

Minimum Required Grade: C-

9 Total Credits Required

Upper Division Writing Courses

Rule: Complete two courses (6 credits).

Note: LIT 300 is open only to English majors who have completed the Pre-English curriculum and have declared a major option.

Note: LIT 300 is the pre-requisite for most other 300- and 400-level LIT courses, including LIT 327. FILM 320 Shakespeare and Film substitutes for LIT 327 Shakespeare.

	Course	**Credits**
	LIT 300 - Literary Criticism Offered every term. Prereq. or coreq., 12 credits of lower-division English courses. Study of various literary theories and their application to literary texts.	3 Credits
	LIT 327 - Shakespeare Offered autumn and spring. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Modern or Classical Language major requirement

Rule: Complete the 202-level proficiency in either a modern or classical language other than English

Note: Students may either take four sequential semesters (101, 102, 201, 202) of a modern or classical language or exemplify proficiency through examination (available through the Modern and Classical Languages and Literature Department).

Minimum Required Grade: Pass

4-18 Total Credits Required

Teaching English

The English Teaching program provides content knowledge, pedagogy, and professional experiences required for teaching literacy in a democratic society. Based on current research and best practices, the English Teaching program integrates the study of language, literature, and media, creating learning communities and supporting teachers as critical thinkers, creative problem solvers, and reflective practitioners. Students who successfully complete this option and the requirements from the College of Education receive both a B.A. in English teaching and a secondary teaching license (grades 5-12) in English. At the graduate level, the English Teaching program offers advanced theory and pedagogy courses, culminating in an M.A. in teaching. The English Teaching Program is also the home of the Montana Writing Project, which is dedicated to improving the teaching and learning of writing at all grade levels and offers a special focus on meeting the state-mandated Indian Education for All.

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

Bachelor of Arts - English; English Teaching Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 45

Required Cumulative GPA: 2.0

Note: Upon successful completion of the Pre-English requirements, students must declare the English major and choose a degree option. English majors with the option in English Teaching must earn 45 of their total credits in Department of English courses and 120 credits overall. English Teaching students must also complete Secondary Licensure Requirements. Please refer to the Teaching Licensure Degree Level for requirements. A major GPA of 2.75 is required to be eligible for student teaching.

Pre-English Core Courses

Rule: Complete four courses (12 credits) including a poetry emphasis and British and American Literature surveys.

Minimum Required Grade: C

12 Total Credits Required

Poetry emphasis

Rule: Complete one course (3 credits).

	Course	Credits

	CRWR 211A - Intro Poetry Workshop Offered intermittently. This beginning writing workshop focuses on the reading, discussion, and revision of students' poems. Students will study and use models of poetic techniques. No prior experience in writing poetry required.	3 Credits
	LIT 120L - Poetry Offered every term. An introduction to the techniques of reading and writing about poetry with emphasis on the lyric and other shorter forms.	3 Credits
	LIT 201 - Intro to Literary Studies Offered every term. Introduction to the field of literary studies, to the conventions of literary analysis, and to the literature option for English majors. Reading, writing, and research skills will be stressed, along with interpretative approaches to major genres within the field.	3 Credits
Minimum Required Grade: C		3 Total Credits Required

Early British Literature survey

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 220L - Brit Lit: Med to Renaissance Offered every term. Representative texts from the Anglo-Saxon period through the Renaissance.	3 Credits
	LIT 221L - Brit Lit: Enlightenment to Rom Offered every term. Representative texts from the seventeenth through the eighteenth century.	3 Credits
Minimum Required Grade: C		3 Total Credits Required

Late British Literature and American Literature survey

Rule: Complete two courses (6 credits).

	Course	Credits
	LIT 210L - American Lit I Offered every term. Representative texts from the pre-colonial period through the Civil War.	3 Credits
	LIT 211L - American Lit II Offered every term. Representative texts from the Civil War to the present.	3 Credits
	LIT 222L - Brit Lit: Victorian to Contemp Offered every term. Representative texts from the early nineteenth century to the present.	3 Credits

Minimum Required Grade: C	6 Total Credits Required

Upper Division Requirements

Rule: Complete two courses (6 credits).

Note: ENLI/LING 465 and ENT 439 do not carry pre-requisites.

	Course	Credits
	ENLI 465 - Structure of Eng for Tchrs Offered intermittently. Same as LING 465. The development of the English language from a historical perspective contrasted with the phonological and grammatical structure of English from a modern linguistic point of view, specifically designed for teachers.	3 Credits
	ENT 439 - Studies in Young Adult Lit Offered autumn. Reading of representative texts covering the history, genres, authors, and themes of literature for students in middle school and high school.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

English Teaching methods courses

Rule: Complete three courses (9 credits).

Note: Students must be admitted to the Teacher Education program prior to enrolling in ENT 440, 441, and 442. Other EDU pre-/co-requisites also apply to ENT 440, 441, and 442.

	Course	Credits
	ENT 440 - Teaching Writing Offered autumn and spring. Prereq. or coreq., EDU 202. Emphasis on teaching writing in grades 5-12. Research about development and maturity of writers, overview of schools of writing/history of writing instruction, strategies for teaching writing as a process, elements of writing craft, criteria for assessing and responding to writing, peer-coaching methods, writing/reading workshops, the role of grammar in improving writing, writing/reading connections, assignment characteristics, and grading practices. Required of students pursuing secondary English major and minor teaching licenses.	3 Credits
	ENT 441 - Tchg Rdng & Literature Offered spring. Prereq. or Coreq., ENT 439, EDU 395. Emphasis on various approaches to teaching reading and literature in grades 5-12. Research about the development and maturity of readers, strategies for teaching reading comprehension and vocabulary, strategies for diagnosing reading abilities and criteria for reading assessment, reading workshops/literature circles. Emphasis on various approaches to teaching literature: genre, inquiry, thematic, chronological and interdisciplinary. Includes techniques for developing responses to fiction, nonfiction, prose, poetry, film and other media. Focus on the design of lesson plans and curriculum using traditional/classic, contemporary, young adult, and multicultural literature in grades 5-12. Required of students pursuing secondary English major and minor teaching licenses.	3 Credits

	ENT 442 - Tchg Oral Lang & Media Lit Offered autumn and spring. Prereq. or coreq.., LING 465, EDU 395. Emphasis on preparation, implementation, and evaluation of teaching strategies and materials in grades 5-12. Includes learning objectives, teaching and learning styles, unit plans, print and non-print media, and creative drama. Explores student-centered curriculum, with emphasis on developmental abilities in speaking, listening and viewing, and multigenre/multimodal communication. Required of students pursuing secondary English major and minor teaching licenses.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

English electives

Rule: Complete two additional English courses

Note: Students may choose electives from ENIR (200-level or above), WRIT (above 101-level), LING (100-level or above), LIT (100-level or above), CRWR (100-level or above), or FILM (100-level or above).

Minimum Required Grade: C-

6 Total Credits Required

Upper Division Literature Electives

Rule: Complete two courses (6 credits)

Note: Please note that most of these courses carry pre-requisites.

Minimum Required Grade: C-

6 Total Credits Required

D Designation: Diversity

Rule: Complete one course (3 credits)

	Course	Credits
	LIT 304 - U.S. Writers of Color Offered intermittently. Prereq., LIT 300 or consent of instr. Selected readings from African American, Asian American, Chicano/a, Latino/a, and Native American literatures.	3 Credits
	LIT 305 - Lit by & About Native Amer Offered autumn. Prereq., three credits of lower-division LIT courses and NASX 105H or 235X. Same as NASX 340. Selected readings from Native American literature with special emphasis on the literature of writers from the Rocky Mountain west.	3 Credits
	LIT 343 - African American Lit Offered intermittently. Prereq., LIT 300 or consent of instr. Selected works by African-American authors. Course may define a narrowed focus such as poetry, women writers, etc.	3 Credits
	LIT 378L - Gay and Lesbian Studies Offered alternate years. Prereq., LIT 300 or consent of instr. Review of the history of the gay and lesbian movement in the twentieth century as a basis for understanding the political, social, and sexual issues that influenced homoerotic cultural representation in plays, films, and novels.	3 Credits

	LIT 379L - Gender & Sexuality in Eng. Fic Offered alternate years. Same as LSH 327L. Major 20th century novels and short stories written in English in different parts of the world and how these texts explore changing concepts of gender and sexuality.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

American literature focus

Rule: Complete one course (3 credits)

	Course	Credits
	LIT 304 - U.S. Writers of Color Offered intermittently. Prereq., LIT 300 or consent of instr. Selected readings from African American, Asian American, Chicano/a, Latino/a, and Native American literatures.	3 Credits
	LIT 305 - Lit by & About Native Amer Offered autumn. Prereq., three credits of lower-division LIT courses and NASX 105H or 235X. Same as NASX 340. Selected readings from Native American literature with special emphasis on the literature of writers from the Rocky Mountain west.	3 Credits
	LIT 314 - The American Novel Offered intermittently. Prereq., LIT 210L or 211L and prereq. or co-req., LIT 300. Examination of a selection of American novels in their historical, cultural, and literary contexts. Exploration of literary movements such as realism, naturalism, modernism, and postmodernism. Discussion of critical theories and application to the texts.	3 Credits
	LIT 315 - Voices of the Am Renaissance Offered intermittently. Prereq., LIT 210L or 211L and LIT 300 or consent of instr. Perspectives on antebellum Native American, African American, and gender issues. Study of the poetry of Walt Whitman and Emily Dickinson in light of these three perspectives.	3 Credits
	LIT 342 - Montana Writers Offered intermittently. Prereq., LIT 210L or 211L. Examination of poems, stories, and novels by or about Montanans and the treatment and representation of race, place, class, gender, sexuality, and identity in Montana. Exploration of the myths and realities of Montana and the American West.	3 Credits
	LIT 343 - African American Lit Offered intermittently. Prereq., LIT 300 or consent of instr. Selected works by African-American authors. Course may define a narrowed focus such as poetry, women writers, etc.	3 Credits
	LIT 363 - Modern Poetry Offered alternate years. Prereq., LIT 300 or consent of instr. Survey of modern poetry in English beginning with Emily Dickinson and Walt Whitman and moving toward the present, centering on modernist poets.	3 Credits

	LIT 373 - Lit & Environment Offered autumn. Prereq., LIT 210L or 211L (ENLT 224L or 225L) and LIT 300 (ENLT 301) or consent of instr. Study of major texts and issues in American nature writing.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Writing Courses

Rule: Complete two courses (6 credits).

Note: LIT 300 is open only to English majors who have completed the Pre-English curriculum and have declared a major option.

Note: LIT 300 is the pre-requisite for most other 300- and 400-level LIT courses, including LIT 327. FILM 320 Shakespeare and Film substitutes for LIT 327 Shakespeare.

	Course	Credits
	LIT 300 - Literary Criticism Offered every term. Prereq. or coreq., 12 credits of lower-division English courses. Study of various literary theories and their application to literary texts.	3 Credits
	LIT 327 - Shakespeare Offered autumn and spring. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Teaching Licensure Requirements

Note: Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum and Instruction in the College of Education and Human Sciences for more information.

Film Studies

In Film Studies, students receive a thorough introduction to the many facets of moving image culture, including a background in film history, theory, and aesthetics. In this interdisciplinary program, students are exposed to a broad array of national and international films, as well as filmic translations of well-known works of literature. Students analyze film from a variety of theoretical perspectives and become critical viewers of what is now one of the most predominant forms of cultural representation. Film Studies currently offers a minor for those students who wish to learn more in this discipline without committing fully to the degree program.

Bachelor of Arts - English; Film Studies Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 45

Required Cumulative GPA: 2.0

Note: Upon successful completion of the Pre-English requirements, students must declare the English major and choose a degree option. English majors with the option in Film Studies must earn 45-60 of their total credits in Department of English courses.

Foundational courses

Rule: Complete two courses (6 credits).

	Course	Credits
	FILM 103L - Introduction to Film Offered every term. The history and development of the film medium. Emphasis on critical analysis of selected classic or significant films.	3 Credits
	LIT 270L - Film & Lit (R-6) Offered intermittently. Studies of the relationship between film and literature. Topics vary.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Focus courses

Rule: Complete two courses (6 credits).

	Course	Credits
	FILM 300 - History of Film Offered every year. Prereq., FILM 103L, LIT 270L. Survey of film history.	3 Credits
	FILM 447 - Film Theory Offered yearly. This course examines key approaches to film theory and criticism, and the theoretical roots of each. Classic and contemporary films will be assessed in the light of the theories covered.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Film electives

Rule: Complete 9 courses (27 credits) from the following list.

Note: Special topics courses (FILM 191, 291, 391, 491) have a repeatability of 6 credits for each level; e.g. although the course prefix and number may be the same, different course titles will count toward major requirements and graduation requirements for up to six credits at each course number level (6 credits of FILM 191, 6 credits of FILM 291, etc.).

Film Genres (FILM 327), Studies in Film (FILM 381), Advanced Studies in Film (FILM 481), Film Directors (FILM 484), and Independent Study (FILM 492) have a repeatability of 9 credits.

PHL 427 Topics in Philosophy of Art can count toward the Film Studies major when the topic specifically includes film.

	Course	Credits

	ENT 442 - Tchg Oral Lang & Media Lit Offered autumn and spring. Prereq. or coreq.., LING 465, EDU 395. Emphasis on preparation, implementation, and evaluation of teaching strategies and materials in grades 5-12. Includes learning objectives, teaching and learning styles, unit plans, print and non-print media, and creative drama. Explores student-centered curriculum, with emphasis on developmental abilities in speaking, listening and viewing, and multigenre/multimodal communication. Required of students pursuing secondary English major and minor teaching licenses.	3 Credits
	FILM 191 - Special Topics (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	FILM 262L - German Cinema Offered intermittently. The development of the German film from its beginnings in 1895 through the contemporary New German Cinema. Topics include Expressionism, New Objectivity, the Nazi film, the German contribution to Hollywood, the post-war film in East and West Germany, and film in unified Germany. Credit not allowed for LS 282L or MCLG 222L and 322L GRMN.	3 Credits
	FILM 291 - Special Topics (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	FILM 308 - Russian Cinema and Culture Offered intermittently. Topically arranged introduction to the cinema of Russia and the former Soviet Union, with particular emphasis on contemporary Russian cinema. Screening preceded by brief cultural and historical background lectures and followed by group and paired discussion. All films screened with English subtitles. No knowledge of Russian is necessary.	3 Credits
	FILM 327 - Film Genres (R-9) Offered every other year. Prereq. FILM 103L. Intensive study of central works within one major film genre.	3 Credits
	FILM 363 - The French Cinema Offered intermittently. An historical, aesthetic, and critical survey of the French cinema, from its beginnings in 1895 through the contemporary cinema (Muet, classical, Realism, Nouvelle Vogue, etc.) with an introduction to contemporary film criticism. Students taking the course for French credits are required to do research, reading, and writing in the French language.	3 Credits
	FILM 365 - Latin Amer Civ Thru Lit & Film Offered in autumn odd-numbered years. The development of the traditional society of Latin American civilization through the interaction of European, Indian and African elements.	3 Credits
	FILM 381 - Studies in the Film (R-9) Offered autumn and spring. Prereq., FILM 103L or consent of instr. Studies in genres, directors, movements, problems, etc.	3 Credits
	FILM 391 - Special Topics (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits

	FILM 448 - Documentary: Thry and Practice Offered yearly. Same as MAR 443. Designed to bring together Film Studies students (theorists) and Media Arts students (filmmakers) so they may draw from their respective fields to collaborate on the production of documentaries. After exposure to both documentary history and criticism, students will work with a team of producers in learning the basic skills involved in documentary production.	3 Credits
	FILM 481 - Advanced Studies in Film (R-9) Offered every other year. Studies in film aesthetics, politics of film, international cinema and comparative film analyses.	3 Credits
	FILM 484 - Film Directors (R-9) Offered every year. Prereq. FILM 103L. Intensive study of the life and work of one major film director.	3 Credits
	FILM 491 - Special Topics (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics	1 To 9 Credits
	FILM 492 - Independent Study (R-9) Offered every term. Pereq., consent of instr. and department chair, and junior or senior standing. Special Projects in film. Only one 492 may be taken per semester.	1 To 9 Credits
	FILM 495 - Practicum R-6	1 To 6 Credits
	MAR 101L - Intro to Media Arts Offered every term. Overview of the media arts and their interaction, integration and development in the creation of story beginning with the early years of photography and movie-making through the introduction of radio and television up to the digital revolution.	3 Credits
	MCLG 339 - Surv African Cinema A diachronic survey of primarily Francophone African cinema accompanied by interpretation and evaluation of films through filmic critical theory. Students taking the course for French credit must read and write in French.	3 Credits
	NASX 360 - Native Amer and Cinema Offered Autumn or Spring. Same as ENFM 344. Surveys the image of Native Americans in American film with an emphasis on "revisionist," or "breakthrough" films. Ultimate focus will be on films featuring Native American writers, directors and actors.	3 Credits
	PHL 102 - Topical Intro to Philosophy (R-9) Offered yearly. An introduction to philosophy through examination of a selected topic (such as existentialism, philosophy of film, technology and the good life, science and society, philosophy of religion).	1 To 4 Credits
	PHL 427 - Topics in Philosophy of Art (R-9) Offered intermittently. Prereq., upper-division standing and PHL 210E, or consent of instr. Examination of philosophical problems related to particular arts and discussion of the nature of the arts. Topics considered may include music, visual arts, literature, and film.	1 To 4 Credits

	SPNS 359 - Span Amer Civ Lit & Film Offered spring in odd-numbered years. Prereq., at least one upper–division class in Spanish and SPNS 301. Same as MCLG and LS 358. The development of the traditional society of Spanish American civilization through the interaction of European, Indian, and African elements. Credit not allowed for both LS/MCLG 358 and SPAN 359.	3 Credits
Minimum Required Grade: C-		27 Total Credits Required

Upper Division Writing Courses

Rule: Complete two courses (6 credits).

Note: LIT 300 is open only to English majors who have completed the Pre-English curriculum and have declared a major option.

Note: LIT 300 is the pre-requisite for most other 300- and 400-level LIT courses, including FILM 320.

	Course	**Credits**
	FILM 320 - Shakespeare and Film Same as LIT 327. Offered once a year. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities in relation to film.	3 Credits
	LIT 300 - Literary Criticism Offered every term. Prereq. or coreq., 12 credits of lower-division English courses. Study of various literary theories and their application to literary texts.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Modern or Classical Language major requirement

Rule: Complete the 202-level proficiency in either a modern or classical language other than English

Note: Students may either take four sequential semesters (101, 102, 201, 202) of a modern or classical language or exemplify proficiency through examination (available through the Modern and Classical Languages and Literature Department).

Minimum Required Grade: Pass

4-18 Total Credits Required

General Linguistics

In conjunction with the Linguistics Program, English also offers an option in English Linguistics which provides a background in both literature. Students interested in Teaching English as a Second Language, which prepares students for the particular concerns of second-language acquisition and pedagogy, may pursue the Teaching English as a Second Language Certificate Program through the Anthropology Department. Please note that the Teaching English as a Second Language (ESL) Certficiate Program is not a stand-alone route to licensure. For licensure requirements, refer to the College of Education section in this catalog.

Bachelor of Arts - English; Linguistics Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 45

Required Cumulative GPA: 2.0

Note: Upon successful completion of the Pre-English requirements, students must declare the English major and choose a degree option. English majors with the option in Linguistics must earn 45-60 of their total credits in Department of English courses.

Pre-English Core Courses

Rule: Complete three courses (9 credits).

Minimum Required Grade: C

9 Total Credits Required

Early British Literature survey

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 220L - Brit Lit: Med to Renaissance Offered every term. Representative texts from the Anglo-Saxon period through the Renaissance.	3 Credits
Minimum Required Grade: C		3 Total Credits Required

British Literature and American Literature surveys

Rule: Complete two courses (6 credits).

	Course	Credits
	LIT 210L - American Lit I Offered every term. Representative texts from the pre-colonial period through the Civil War.	3 Credits
	LIT 211L - American Lit II Offered every term. Representative texts from the Civil War to the present.	3 Credits
	LIT 221L - Brit Lit: Enlightenment to Rom Offered every term. Representative texts from the seventeenth through the eighteenth century.	3 Credits
	LIT 222L - Brit Lit: Victorian to Contemp Offered every term. Representative texts from the early nineteenth century to the present.	3 Credits
Minimum Required Grade: C		6 Total Credits Required

Upper Division Requirements

Rule: Complete nine courses (27 credits).

Note: ENLI/LING 465 and LING 470 do not carry pre-requisites. LING 470 is a pre-requisite for all other LING courses above 470 (e.g. 471+).

	Course	Credits

	-	
	ENLI 465 - Structure of Eng for Tchrs Offered intermittently. Same as LING 465. The development of the English language from a historical perspective contrasted with the phonological and grammatical structure of English from a modern linguistic point of view, specifically designed for teachers.	3 Credits
	LING 470 - Linguistic Analysis Offered autumn. An in-depth examination of the formal properties of language, concentrating on the core areas of linguistic analysis (phonetics, phonology, morphology, syntax and semantics).	3 Credits
	LING 471 - Phonetics and Phonology Offered autumn. Prereq., LING 470. A study of phonetic and phonological systems from as many as 20 languages, most of them non–Indo–European; training in how to do linguistic analysis as well as linguistic theory. This course co-convenes with LING 571.	3 Credits
	LING 472 - Generative Syntax Offered autumn. Prereq., LING 470. A study of the human language sentence–formation system, the means for expressing semantic information as propositional content. Emphasis on the abstraction of utterances in the form of mathematical objects. This course co-convenes with LING 572.	3 Credits
	LING 474 - Historical Linguistics Offered spring even-numbered years. Prereq., LING 470. An introduction to the study of language change over time. Topics include: methods for studying language change (the comparative method and internal reconstruction); types of language change (sound change, borrowing, analogical change, lexical, syntactic, and semantic change); and explanations for language change. The principles of historical reconstruction and comparative method in the analysis of linguistic variation and change. This course co-convenes with LING 574.	3 Credits
	LING 475 - Linguistic Field Methods Offered spring odd-numbered years. Prereq., LING 470. Writing up linguistic data; developing techniques for eliciting linguistic data by working with a native speaker of a less commonly taught language. This course co-convenes with LING 575.	3 Credits
	LING 477 - Bilingualism Offered autumn. Prereq., LING 270S or equiv. Societal and individual bilingualism: topics include language policy, maintenance, interference, code-switching and mixting, and bilingual education.	3 Credits
	LING 478 - Learner Language Offered spring. Prereq., LING 270S or equivalent. Observing/describing language learners' behaviors and, to a degree, advances toward proficiency (i.e., fluency plus accuracy); the presence of error as conditioned by a priori knowledge of language and implications for child and adult development; and applying typical methods of linguistic analysis to the (non-) systematic variants in language form characterizing developmental processes as a way of trying to explain variable behavior.	3 Credits
	LING 489 - Morphology Offered spring. Prereq., LING 470. A survey of the morphological features of several unrelated languages to provide the student with a broad overview of how languages compare and contrast. This course co-convenes with LING 589.	3 Credits

Minimum Required Grade: C-	27 Total Credits Required

Upper Division English Electives

Rule: Complete one course

Note: Please note that these courses carry pre-requisites.

	Course	Credits
	LIT 349L - Medieval Lit Offered alternate years. Prereq., LIT 300 or consent of instr. Exploration of literature from the medieval period, focusing on the major cultural and intellectual influences on the emergence of vernacular writing. Topics will vary, but will regularly include Anglo-Saxon literature and Middle English literature (excluding Chaucer).	3 Credits
	LIT 350L - Chaucer Offered alternate years. Critical reading of Chaucer's masterpiece, the Canterbury Tales, with attention to Chaucerian irony, the author's place in literary history, and issues in Chaucer studies.	3 Credits
Minimum Required Grade: C-		

Upper Division Writing Courses

Rule: Complete two courses (6 credits).

Note: LIT 300 is open only to English majors who have completed the Pre-English curriculum and have declared a major option.

Note: LIT 300 is the pre-requisite for most other 300- and 400-level LIT courses, including LIT 327. FILM 320 Shakespeare and Film substitutes for LIT 327 Shakespeare.

	Course	Credits
	LING 473 - Language and Culture Offered spring. Prereq., LING 470. Technical study of the relationships between grammatical categories and world view. This course co-convenes with LING 573.	3 Credits
	LIT 327 - Shakespeare Offered autumn and spring. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Modern or Classical Language major requirement

Rule: Complete the 202-level proficiency in either a modern or classical language other than English

Note: Students may either take four sequential semesters (101, 102, 201, 202) of a modern or classical language or exemplify proficiency through examination (available through the Modern and Classical Languages and Literature Department).

Minimum Required Grade: Pass

4-18 Total Credits Required

Literature

Under the Literature option, students ground their study in the reading and examination of works through a series of historically based surveys as well as other core courses, covering the techniques of literary analysis, the application of literary theory, and finally the development of a research project in a senior capstone. Students complement these core courses with a selection of electives that engage specific genres, authors, and periods, as well as different disciplines (e.g. Literature and the Environment) and literatures of diversity (e.g. Native American Literature). M.A. students select graduate seminars in American, British, and comparative literatures as well as other disciplines, their course work culminating in a research thesis or a portfolio of seminar papers revised in collaboration with a committee. The literature emphasis imparts an understanding of not only the aesthetic richness of canonical and emerging literatures but also the historical and cultural forces that have contributed to their making. The classes are of a size that makes discussion very much a part of a student's experience.

Bachelor of Arts - English; Literature Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 42

Required Cumulative GPA: 2.0

Note: Upon successful completion of the Pre-English requirements, students must declare the English major and choose a degree option. English majors with the option in Literature must earn 42-60 of their total credits in Department of English courses.

Pre-English Core Courses

Rule: Complete four courses (12 credits) including LIT 201, British, and American Literature surveys.

	Course	Credits
	LIT 201 - Intro to Literary Studies Offered every term. Introduction to the field of literary studies, to the conventions of literary analysis, and to the literature option for English majors. Reading, writing, and research skills will be stressed, along with interpretative approaches to major genres within the field.	3 Credits
Minimum Required Grade: C		12 Total Credits Required

Early British Literature survey

Rule: Complete one course (3 credits).

Note: LIT 220 satisfies the "A" designation. Students who elect to take LIT 220 need not take another "A" designated-course at the 300-level (see Upper Division Core requirements). LIT 221 satisfies the "B" designation. Students who elect to take LIT 221 need not take another "B" designated-course at the 300-level (see Upper Division Core requirements).

	Course	Credits
	LIT 220L - Brit Lit: Med to Renaissance Offered every term. Representative texts from the Anglo-Saxon period through the Renaissance.	3 Credits
	LIT 221L - Brit Lit: Enlightenment to Rom Offered every term. Representative texts from the seventeenth through the eighteenth century.	3 Credits

Minimum Required Grade: C	3 Total Credits Required

Late British Literature and American Literature survey

Rule: Complete two courses (6 credits).

Note: LIT 210 satisfies the "B" designation. Students who elect to take LIT 210 need not take another "B" designated-course at the 300-level (see Upper Division Core requirements).

	Course	Credits
	LIT 210L - American Lit I Offered every term. Representative texts from the pre-colonial period through the Civil War.	3 Credits
	LIT 211L - American Lit II Offered every term. Representative texts from the Civil War to the present.	3 Credits
	LIT 222L - Brit Lit: Victorian to Contemp Offered every term. Representative texts from the early nineteenth century to the present.	3 Credits
Minimum Required Grade: C		6 Total Credits Required

Upper Division Requirements

Rule: Complete four courses (12 credits).

Note: LIT 220 satisfies the "A" designation. Students who elect to take LIT 220 need not take another "A" designated-course at the 300-level, but must substitute another 300-level LIT elective.

LIT 221 and LIT 210 satisfy the "B" designation. Students who elect to take LIT 221 or 210 need not take another "B" designated-course at the 300-level, but must substitute another 300-level LIT elective.

Minimum Required Grade: C-

12 Total Credits Required

A Designation: Medieval through early modern British Literature

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 349L - Medieval Lit Offered alternate years. Prereq., LIT 300 or consent of instr. Exploration of literature from the medieval period, focusing on the major cultural and intellectual influences on the emergence of vernacular writing. Topics will vary, but will regularly include Anglo-Saxon literature and Middle English literature (excluding Chaucer).	3 Credits
	LIT 350L - Chaucer Offered alternate years. Critical reading of Chaucer's masterpiece, the Canterbury Tales, with attention to Chaucerian irony, the author's place in literary history, and issues in Chaucer studies.	3 Credits

	LIT 351 - Donne & His Followers Offered alternate years. Prereq., LIT 300 or consent of instr. Close study of John Donne and other early 17th century religious poets within the context of Renaissance intellectual history.	3 Credits
	LIT 353 - Milton Offered alternate years. Prereq., LIT 300 or consent of instr. Selected study of poetry and prose of Milton.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

B Designation: Enlightenment through Romantic British Literature or pre-1865 American Literature

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 353 - Milton Offered alternate years. Prereq., LIT 300 or consent of instr. Selected study of poetry and prose of Milton.	3 Credits
	LIT 355 - British Romanticism Offered alternate years. Prereq. or co-req., LIT 300. Introduction to the major texts, themes, and authors of British literature from 1790-1815, focusing on poets such as Blake, Barbauld, Wordsworth, Coleridge, and P.B. Shelley but attending also to prose writers from Austen to Mary Shelley.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

C Designation: 400-level theory

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 420 - Critical Theory (R-9) Offered autumn or spring. Prereq., LIT 300 and six credits in literature courses numbered 300 or higher or consent of instr. Study and application of one or more theoretical approaches to interpreting texts (e.g., aesthetic post-structural, new historicist, classical, Renaissance, Romantic, narrative, psychoanalytic, formalist, neo-Marxist, feminist, gender, cultural studies and reader-response theory).	3 Credits
	LIT 421 - History of Criticism & Theory Offered autumn or spring. Prereq., LIT 300 and six credits in literature courses numbered 300 or higher or consent of instr. Survey of the historical development of critical theories which shaped ways of reading and writing from Plato and Aristotle to the present.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

D Designation: Diversity

Rule: Complete one course (3 credits)

	Course	Credits
	LIT 304 - U.S. Writers of Color Offered intermittently. Prereq., LIT 300 or consent of instr. Selected readings from African American, Asian American, Chicano/a, Latino/a, and Native American literatures.	3 Credits
	LIT 305 - Lit by & About Native Amer Offered autumn. Prereq., three credits of lower-division LIT courses and NASX 105H or 235X. Same as NASX 340. Selected readings from Native American literature with special emphasis on the literature of writers from the Rocky Mountain west.	3 Credits
	LIT 314 - The American Novel Offered intermittently. Prereq., LIT 210L or 211L and prereq. or co-req., LIT 300. Examination of a selection of American novels in their historical, cultural, and literary contexts. Exploration of literary movements such as realism, naturalism, modernism, and postmodernism. Discussion of critical theories and application to the texts.	3 Credits
	LIT 315 - Voices of the Am Renaissance Offered intermittently. Prereq., LIT 210L or 211L and LIT 300 or consent of instr. Perspectives on antebellum Native American, African American, and gender issues. Study of the poetry of Walt Whitman and Emily Dickinson in light of these three perspectives.	3 Credits
	LIT 343 - African American Lit Offered intermittently. Prereq., LIT 300 or consent of instr. Selected works by African-American authors. Course may define a narrowed focus such as poetry, women writers, etc.	3 Credits
	LIT 363 - Modern Poetry Offered alternate years. Prereq., LIT 300 or consent of instr. Survey of modern poetry in English beginning with Emily Dickinson and Walt Whitman and moving toward the present, centering on modernist poets.	3 Credits
	LIT 378L - Gay and Lesbian Studies Offered alternate years. Prereq., LIT 300 or consent of instr. Review of the history of the gay and lesbian movement in the twentieth century as a basis for understanding the political, social, and sexual issues that influenced homoerotic cultural representation in plays, films, and novels.	3 Credits
	LIT 379L - Gender & Sexuality in Eng. Fic Offered alternate years. Same as LSH 327L. Major 20th century novels and short stories written in English in different parts of the world and how these texts explore changing concepts of gender and sexuality.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Upper Division English Electives

Rule: Complete three courses (9 credits) of 300- or 400-level English electives.

Note: Please note that most of these courses carry pre-requisites.

Note: Select any three courses (9 credits) from the course prefixes CRWR, ENIR, ENLI, FILM, LING, or LIT. All courses must be 300- or 400-level.

Minimum Required Grade: C-

9 Total Credits Required

Literature Seminar Capstone

Rule: Complete one course (3 credits).

Note: Students must complete the capstone requirement at UM, ideally during their last two semesters of undergraduate study.

	Course	Credits
	LIT 494 - Seminar: Lit Capstone (R 9) Offered autumn and spring. Prereq., LIT 300 and nine credits in literature courses numbered higher than 300. Required for completing the English literature option, this seminar will allow students to conduct advanced studies in literary figures and topics chosen by faculty to engage a broad range of interests. A long research paper is required.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Writing Courses

Rule: Complete two courses (6 credits).

Note: LIT 300 is open only to English majors who have completed the Pre-English curriculum and have declared a major option.

Note: LIT 300 is the pre-requisite for most other 300- and 400-level LIT courses, including LIT 327. FILM 320 Shakespeare and Film substitutes for LIT 327 Shakespeare.

	Course	Credits
	LIT 300 - Literary Criticism Offered every term. Prereq. or coreq., 12 credits of lower-division English courses. Study of various literary theories and their application to literary texts.	3 Credits
	LIT 327 - Shakespeare Offered autumn and spring. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Modern or Classical Language major requirement

Rule: Complete the 202-level proficiency in either a modern or classical language other than English

Note: Students may either take four sequential semesters (101, 102, 201, 202) of a modern or classical language or exemplify proficiency through examination (available through the Modern and Classical Languages and Literature Department).

Minimum Required Grade: Pass

4-18 Total Credits Required

English Minor

Minor - English (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 18

Required Cumulative GPA: 2.0

Note: English minors must earn at least 18 credits within the English Department (excluding WRIT courses).

Foundational courses

Rule: Complete any two 200-level courses with LIT or CRWR prefixes

Minimum Required Grade: C-

6 Total Credits Required

Focus courses

Rule: Complete any four upper-division English elective courses (12 credits).

Note: Students must complete four upper-division English elective courses. Any 300+level courses with the prefixes LIT, ENIR, FILM, and CRWR qualify. Some of these upper-division courses carry pre-requisites, so students should select lower- and upper-division courses carefully to ensure meeting those pre-requisites.

Students wishing to enroll in 300- or 400-level CRWR workshops (CRWR 310/311/312/410/411/412) must complete the 200-level CRWR pre-requisite. CRWR 410/411/412 also require a writing submission for consent of instructor.

Students wishing to enroll in upper-division LIT courses need to take 6 credits of LIT at the 200-level, LIT 300, and/or receive consent of instructor.

Minimum Required Grade: C-

12 Total Credits Required

Teaching English Minor

A teaching minor is an academic minor which may contain different course requirements designed to meet state standards. Those interested in teaching in K-12 schools must complete a teaching major in a content area plus the teacher preparation program through the Department of Curriculum and Instruction. Additional teaching areas can be added through completion of either a teaching major or a teaching minor in that content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

The English Teaching program provides content knowledge, pedagogy, and professional experiences required for teaching literacy in a democratic society. Based on current research and best practices, the English Teaching program integrates the study of language, literature, and media, creating learning communities and supporting teachers as critical thinkers, creative problem solvers, and reflective practitioners. Students who successfully complete this option and the requirements from the College of Education receive both a B.A. in English teaching and a secondary teaching license (grades 5-12) in English. At the graduate level, the English Teaching program offers advanced theory and pedagogy courses, culminating in an M.A. in English (Teaching). The English Teaching Program is also the home of the Montana Writing Project, which is dedicated to improving the teaching and learning of writing at all grade levels and offers a special focus on meeting the state-mandated Indian Education for All.

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major /teaching track within that degree program which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a major/minor form for graduation or the major/minor/concentration section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Minor - English (Minor); Track: Teaching English

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 36

Required Cumulative GPA: 2.0

Note: English Teaching minors must earn 36 credits within the English Department. Individuals completing a teaching minor must also complete a teaching major in another content area. A minor GPA of 2.75 is required to be eligible for student teaching.

Foundational courses

Rule: Complete three courses (9 credits).

Minimum Required Grade: C-

9 Total Credits Required

Early British Literature survey

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 220L - Brit Lit: Med to Renaissance Offered every term. Representative texts from the Anglo-Saxon period through the Renaissance.	3 Credits
	LIT 221L - Brit Lit: Enlightenment to Rom Offered every term. Representative texts from the seventeenth through the eighteenth century.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Late British Literature and American Literature surveys

Rule: Complete two courses (6 credits).

	Course	Credits
	LIT 210L - American Lit I Offered every term. Representative texts from the pre-colonial period through the Civil War.	3 Credits

	LIT 211L - American Lit II Offered every term. Representative texts from the Civil War to the present.	3 Credits
	LIT 222L - Brit Lit: Victorian to Contemp Offered every term. Representative texts from the early nineteenth century to the present.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Requirements

Rule: Complete two courses (6 credits).

Note: ENLI/LING 465 and ENT 439 do not carry pre-requisites.

	Course	Credits
	ENLI 465 - Structure of Eng for Tchrs Offered intermittently. Same as LING 465. The development of the English language from a historical perspective contrasted with the phonological and grammatical structure of English from a modern linguistic point of view, specifically designed for teachers.	3 Credits
	ENT 439 - Studies in Young Adult Lit Offered autumn. Reading of representative texts covering the history, genres, authors, and themes of literature for students in middle school and high school.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

English Teaching methods courses

Rule: Complete three courses (9 credits).

Note: Students must be admitted to the Teacher Education Program prior to enrolling in ENT 440, 441, and 442. Other EDU pre-/co-requisites also apply to ENT 440, 441, and 442.

	Course	Credits
	ENT 440 - Teaching Writing Offered autumn and spring. Prereq. or coreq., EDU 202. Emphasis on teaching writing in grades 5-12. Research about development and maturity of writers, overview of schools of writing/history of writing instruction, strategies for teaching writing as a process, elements of writing craft, criteria for assessing and responding to writing, peer-coaching methods, writing/reading workshops, the role of grammar in improving writing, writing/reading connections, assignment characteristics, and grading practices. Required of students pursuing secondary English major and minor teaching licenses.	3 Credits

	ENT 441 - Tchg Rdng & Literature Offered spring. Prereq. or Coreq., ENT 439, EDU 395. Emphasis on various approaches to teaching reading and literature in grades 5-12. Research about the development and maturity of readers, strategies for teaching reading comprehension and vocabulary, strategies for diagnosing reading abilities and criteria for reading assessment, reading workshops/literature circles. Emphasis on various approaches to teaching literature: genre, inquiry, thematic, chronological and interdisciplinary. Includes techniques for developing responses to fiction, nonfiction, prose, poetry, film and other media. Focus on the design of lesson plans and curriculum using traditional/classic, contemporary, young adult, and multicultural literature in grades 5-12. Required of students pursuing secondary English major and minor teaching licenses.	3 Credits
	ENT 442 - Tchg Oral Lang & Media Lit Offered autumn and spring. Prereq. or coreq.., LING 465, EDU 395. Emphasis on preparation, implementation, and evaluation of teaching strategies and materials in grades 5-12. Includes learning objectives, teaching and learning styles, unit plans, print and non-print media, and creative drama. Explores student-centered curriculum, with emphasis on developmental abilities in speaking, listening and viewing, and multigenre/multimodal communication. Required of students pursuing secondary English major and minor teaching licenses.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Upper Division Literature Electives

Rule: Complete two courses (6 credits).
Note: Please note that most of these courses carry pre-requisites.
Minimum Required Grade: C-
6 Total Credits Required

D Designation: Diversity

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 304 - U.S. Writers of Color Offered intermittently. Prereq., LIT 300 or consent of instr. Selected readings from African American, Asian American, Chicano/a, Latino/a, and Native American literatures.	3 Credits
	LIT 305 - Lit by & About Native Amer Offered autumn. Prereq., three credits of lower-division LIT courses and NASX 105H or 235X. Same as NASX 340. Selected readings from Native American literature with special emphasis on the literature of writers from the Rocky Mountain west.	3 Credits
	LIT 343 - African American Lit Offered intermittently. Prereq., LIT 300 or consent of instr. Selected works by African-American authors. Course may define a narrowed focus such as poetry, women writers, etc.	3 Credits

	LIT 378L - Gay and Lesbian Studies Offered alternate years. Prereq., LIT 300 or consent of instr. Review of the history of the gay and lesbian movement in the twentieth century as a basis for understanding the political, social, and sexual issues that influenced homoerotic cultural representation in plays, films, and novels.	3 Credits
	LIT 379L - Gender & Sexuality in Eng. Fic Offered alternate years. Same as LSH 327L. Major 20th century novels and short stories written in English in different parts of the world and how these texts explore changing concepts of gender and sexuality.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

American literature focus

Rule: Complete one course (3 credits).

	Course	Credits
	LIT 304 - U.S. Writers of Color Offered intermittently. Prereq., LIT 300 or consent of instr. Selected readings from African American, Asian American, Chicano/a, Latino/a, and Native American literatures.	3 Credits
	LIT 305 - Lit by & About Native Amer Offered autumn. Prereq., three credits of lower-division LIT courses and NASX 105H or 235X. Same as NASX 340. Selected readings from Native American literature with special emphasis on the literature of writers from the Rocky Mountain west.	3 Credits
	LIT 314 - The American Novel Offered intermittently. Prereq., LIT 210L or 211L and prereq. or co-req., LIT 300. Examination of a selection of American novels in their historical, cultural, and literary contexts. Exploration of literary movements such as realism, naturalism, modernism, and postmodernism. Discussion of critical theories and application to the texts.	3 Credits
	LIT 315 - Voices of the Am Renaissance Offered intermittently. Prereq., LIT 210L or 211L and LIT 300 or consent of instr. Perspectives on antebellum Native American, African American, and gender issues. Study of the poetry of Walt Whitman and Emily Dickinson in light of these three perspectives.	3 Credits
	LIT 342 - Montana Writers Offered intermittently. Prereq., LIT 210L or 211L. Examination of poems, stories, and novels by or about Montanans and the treatment and representation of race, place, class, gender, sexuality, and identity in Montana. Exploration of the myths and realities of Montana and the American West.	3 Credits

	LIT 343 - African American Lit Offered intermittently. Prereq., LIT 300 or consent of instr. Selected works by African-American authors. Course may define a narrowed focus such as poetry, women writers, etc.	3 Credits
	LIT 373L - Lit & Environment Offered alternate years. Prereq., LIT 210L or 211L and LIT 300 or consent of instr. Study of major texts and issues in American nature writing.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper-division Writing Courses

Rule: Complete two courses (6 credits).

Note: English Teaching students may substitute FILM 320 Shakespeare and Film for LIT 327.

	Course	Credits
	LIT 300 - Literary Criticism Offered every term. Prereq. or coreq., 12 credits of lower-division English courses. Study of various literary theories and their application to literary texts.	3 Credits
	LIT 327 - Shakespeare Offered autumn and spring. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Teaching licensure requirements

Note: Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum and Instruction in the College of Education and Human Sciences for more information.

Film Studies Minor

Minor - Film Studies (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 27

Required Cumulative GPA: 2.0

Note: Students minoring in Film Studies must earn 27 total credits.

Foundational courses

Rule: Complete two courses (6 credits).

	Course	Credits
	FILM 103L - Introduction to Film Offered every term. The history and development of the film medium. Emphasis on critical analysis of selected classic or significant films.	3 Credits
	LIT 270L - Film & Lit (R-6) Offered intermittently. Studies of the relationship between film and literature. Topics vary.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Focus courses

Rule: Complete two courses (6 credits).

	Course	Credits
	FILM 300 - History of Film Offered every year. Prereq., FILM 103L, LIT 270L. Survey of film history.	3 Credits
	FILM 447 - Film Theory Offered yearly. This course examines key approaches to film theory and criticism, and the theoretical roots of each. Classic and contemporary films will be assessed in the light of the theories covered.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Film electives

Rule: Complete 5 courses (15 credits) from the following list.

Note: Special topics courses (FILM 191, 291, 391, 491) have a repeatability of 6 credits for each level; e.g. although the course prefix and number may be the same, different course titles will count toward major requirements and graduation requirements for up to six credits at each course number level (6 credits of FILM 191, 6 credits of FILM 291, etc.).

Film Genres (FILM 327), Studies in Film (FILM 381), Advanced Studies in Film (FILM 481), Film Directors (FILM 484), and Independent Study (FILM 492) have a repeatability of 9 credits.

PHL 427 Topics of Philosophy of Art can count toward the Film Studies minor when the topic specifically includes film.

	Course	Credits
	ENT 442 - Tchg Oral Lang & Media Lit Offered autumn and spring. Prereq. or coreq.., LING 465, EDU 395. Emphasis on preparation, implementation, and evaluation of teaching strategies and materials in grades 5-12. Includes learning objectives, teaching and learning styles, unit plans, print and non-print media, and creative drama. Explores student-centered curriculum, with emphasis on developmental abilities in speaking, listening and viewing, and multigenre/multimodal communication. Required of students pursuing secondary English major and minor teaching licenses.	3 Credits

	FILM 191 - Special Topics (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	FILM 262L - German Cinema Offered intermittently. The development of the German film from its beginnings in 1895 through the contemporary New German Cinema. Topics include Expressionism, New Objectivity, the Nazi film, the German contribution to Hollywood, the post-war film in East and West Germany, and film in unified Germany. Credit not allowed for LS 282L or MCLG 222L and 322L GRMN.	3 Credits
	FILM 291 - Special Topics (R-6) Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 6 Credits
	FILM 308 - Russian Cinema and Culture Offered intermittently. Topically arranged introduction to the cinema of Russia and the former Soviet Union, with particular emphasis on contemporary Russian cinema. Screening preceded by brief cultural and historical background lectures and followed by group and paired discussion. All films screened with English subtitles. No knowledge of Russian is necessary.	3 Credits
	FILM 320 - Shakespeare and Film Same as LIT 327. Offered once a year. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities in relation to film.	3 Credits
	FILM 327 - Film Genres (R-9) Offered every other year. Prereq. FILM 103L. Intensive study of central works within one major film genre.	3 Credits
	FILM 363 - The French Cinema Offered intermittently. An historical, aesthetic, and critical survey of the French cinema, from its beginnings in 1895 through the contemporary cinema (Muet, classical, Realism, Nouvelle Vogue, etc.) with an introduction to contemporary film criticism. Students taking the course for French credits are required to do research, reading, and writing in the French language.	3 Credits
	FILM 365 - Latin Amer Civ Thru Lit & Film Offered in autumn odd-numbered years. The development of the traditional society of Latin American civilization through the interaction of European, Indian and African elements.	3 Credits
	FILM 381 - Studies in the Film (R-9) Offered autumn and spring. Prereq., FILM 103L or consent of instr. Studies in genres, directors, movements, problems, etc.	3 Credits
	FILM 391 - Special Topics (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits

	FILM 448 - Documentary: Thry and Practice Offered yearly. Same as MAR 443. Designed to bring together Film Studies students (theorists) and Media Arts students (filmmakers) so they may draw from their respective fields to collaborate on the production of documentaries. After exposure to both documentary history and criticism, students will work with a team of producers in learning the basic skills involved in documentary production.	3 Credits
	FILM 481 - Advanced Studies in Film (R-9) Offered every other year. Studies in film aesthetics, politics of film, international cinema and comparative film analyses.	3 Credits
	FILM 484 - Film Directors (R-9) Offered every year. Prereq. FILM 103L. Intensive study of the life and work of one major film director.	3 Credits
	FILM 491 - Special Topics (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics	1 To 9 Credits
	FILM 492 - Independent Study (R-9) Offered every term. Pereq., consent of instr. and department chair, and junior or senior standing. Special Projects in film. Only one 492 may be taken per semester.	1 To 9 Credits
	FILM 495 - Practicum R-6	1 To 6 Credits
	MAR 101L - Intro to Media Arts Offered every term. Overview of the media arts and their interaction, integration and development in the creation of story beginning with the early years of photography and movie-making through the introduction of radio and television up to the digital revolution.	3 Credits
	MCLG 339 - Surv African Cinema A diachronic survey of primarily Francophone African cinema accompanied by interpretation and evaluation of films through filmic critical theory. Students taking the course for French credit must read and write in French.	3 Credits
	NASX 360 - Native Amer and Cinema Offered Autumn or Spring. Same as ENFM 344. Surveys the image of Native Americans in American film with an emphasis on "revisionist," or "breakthrough" films. Ultimate focus will be on films featuring Native American writers, directors and actors.	3 Credits
	PHL 102 - Topical Intro to Philosophy (R-9) Offered yearly. An introduction to philosophy through examination of a selected topic (such as existentialism, philosophy of film, technology and the good life, science and society, philosophy of religion).	1 To 4 Credits
	PHL 427 - Topics in Philosophy of Art (R-9) Offered intermittently. Prereq., upper-division standing and PHL 210E, or consent of instr. Examination of philosophical problems related to particular arts and discussion of the nature of the arts. Topics considered may include music, visual arts, literature, and film.	1 To 4 Credits

	SPNS 359 - Span Amer Civ Lit & Film Offered spring in odd-numbered years. Prereq., at least one upper–division class in Spanish and SPNS 301. Same as MCLG and LS 358. The development of the traditional society of Spanish American civilization through the interaction of European, Indian, and African elements. Credit not allowed for both LS/MCLG 358 and SPAN 359.	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Students choosing the English/Film Studies option or pursuing the Film Studies minor will receive an excellent liberal arts education through the close examination of the many facets of moving image culture. We believe that a solid understanding of cinema entails a good grasp of history and the philosophical, psychological and political theory from which film theory draws. In this interdisciplinary program, students will also be exposed to a broad array of national and international films, as well as filmic translations of well-known works of literature. Students will analyze film from a variety of theoretical perspectives and become critical viewers of what is now one of the most predominant forms of cultural representation.

Irish Studies Minor

Minor - Irish Studies (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 18

Required Cumulative GPA: 2.0

Note: Irish Studies students must earn at least 18 credits. These credits will include both the required coursework and electives.

Foundational courses

Rule: Complete 3 courses (9 credits).

Note: ENIR 249 is offered intermittently. Students may substitute ENIR 345 or ENIR 360 for ENIR 249.

	Course	**Credits**
	ENIR 101 - Elementary Irish I Offered autumn or spring. Same as IRSH 101. This course represents an introduction to modern Irish in both its spoken and written forms: basic principles of grammar and sentence structure are covered. Emphasis is placed on the application of these principles in every-day situations. The General Education Modern & Classical Languages requirement can be fulfilled by successful completion of 101, 102 and 103. For proficiency equal to the 202-level, students must take the five semester sequence (101, 102, 103, 201, & 202) of Irish language study.	3 Credits

	ENIR 102 - Elementary Irish II Offered autumn or spring. Same as IRSH 102. The primary objective of this course is to build on the foundations laid in Elementary Irish I. Students will expand their vocabulary with a special focus on verbs; they will also engage new themes that demand a corresponding increase in their store of nouns, adjectives, idioms and expressions. The General Education Modern & Classical Languages requirement can be fulfilled by successful completion of 101, 102 and 103. For proficiency equal to the 202-level, students must take the five semester sequence (101, 102, 103, 201, & 202) of Irish language study.	3 Credits
	ENIR 249 - The Irish Offered intermittently. Same as HSTR 250. Ireland, the Irish people, and the Irish diaspora, from first settlement to contemporary troubles.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Irish Literature Course

Rule: Complete 1 course (3 credits) from the following options

Note: LIT 331 Major Authors can count for the Irish Studies minor when the course focuses on an Irish author (e.g. James Joyce).

	Course	**Credits**
	ENIR 345 - Literature in the Irish Lang Offered intermittently. This course acknowledges Irish as the oldest documented vernacular in Europe and its literature as a voice that is over 1500 years old. Examines the literary response of Gaelic Ireland to invasion, conquest, and colonization as articulated by its literature.	3 Credits
	ENIR 360 - Irish/N Irish Literature Offered intermittently. Examines (in English) selection of fiction, poetry, drama, film, and music from the Irish and/or Northern Irish literary traditions. Students will seek to understand how artists respond to the burdens of history, identity, and political conflict, and how they articulate the possibilities afforded by Ireland's changing position in the world.	3 Credits
	ENIR 380 - Topics in Irish Studies Offered intermittently. A rotating variety of special topics in Irish Studies, including Irish and Irish-American cinema, major Irish/N. Irish authors, Irish cultural studies, and transatlantic and comparative studies.	3 Credits
	ENIR 395 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, new courses, or one-time offerings of current topics;	1 To 6 Credits
	LIT 331 - Major Author/s (R-9) Offered intermittently. Prereq., LIT 300 or consent of instr. Intensive study of the life and works of one author writing in English (courses offered under this rubric have included Chaucer, Milton, Faulkner, Joyce, Twain; less frequently, Conrad, Hemingway, Blake, Woolf, D.H. Lawrence, Welty).	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Minor electives

Rule: Complete 2 courses (6 credits) from the following options.

Note: Irish Theater is offered intermittently through the School of Fine Arts as THTR 391.

Students who wish to continue with Irish language through the 202 level may do so, but only Irish language 103 and 201 can count for minor electives.

LIT 376 & LIT 391 may count toward the Irish Studies minor when the topics cover Irish themes, content, and literature.

	Course	Credits
	DANC 160A - Dance Forms: Irish (R-8) Offered autumn and spring. Introduction to basic Irish dance vocabulary and technique.	2 Credits
	ENIR 103 - Elementary Irish III Offered autumn or spring. Same as IRSH 103. The primary objective of this course is to build on the foundations laid in Elementary Irish I and II. Students will expand their vocabulary with a special focus on verbs; they will also engage new themes that demand a corresponding increase in their store of nouns, adjectives, idioms and expressions. The General Education Modern & Classical Languages requirement can be fulfilled by successful completion of 101, 102 and 103. For proficiency equal to the 202-level, students must take the five semester sequence (101, 102, 103, 201, & 202) of Irish language study.	3 Credits
	ENIR 201 - Intermediate Irish I Offered spring semester. Prereq. ENIR 101, 102, and 103 or their equivalent from another university. Students will continue their study of the verbs; engage more complex syntax and grammatical constructions; and consult the prose and poetry of the written and oral literary traditions. For proficiency equal to the 202-level, students must take the five semester sequence (101, 102, 103, 201, & 202) of Irish language study.	3 Credits
	ENIR 380 - Topics in Irish Studies Offered intermittently. A rotating variety of special topics in Irish Studies, including Irish and Irish-American cinema, major Irish/N. Irish authors, Irish cultural studies, and transatlantic and comparative studies.	3 Credits
	ENIR 395 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, new courses, or one-time offerings of current topics;	1 To 6 Credits
	ENIR 496 - Independent Study (R-9) Offered intermittently. Experimental offerings of visiting professors, new courses, or one-time offerings of current topics;	1 To 3 Credits

	LIT 376 - Lit & Oth Disciplines (R-9) Offered intermittently. Prereq., nine credits in LIT or LSH or consent of instr. Selected works of literature studied in conjunction with works of art, music, religion, philosophy, or another discipline (e.g. Film and Literature, Modernism, Literature and Science, Bible as Literature, Song).	3 Credits
	LIT 391 - Special Topics (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits
	THTR 391 - Special Topics/Exprmtl Courses (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 9 Credits
Minimum Required Grade: C-		6 Total Credits Required

The Department of English offers an interdisciplinary minor in Irish Studies which provides students access to instruction in Irish language, history, literature, and culture. This academic and artistic approach to Irish culture involves an interdisciplinary and inter-collegiate collaboration that brings together leading scholars in the humanities and the creative arts.

Literature and the Environment

- English; Literature & The Environment Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 45
Required Cumulative GPA: 2.0

Core Courses

Rule: Must complete 27 credits from the following:

	Course	**Credits**
	LIT 201 - Intro to Literary Studies Offered every term. Introduction to the field of literary studies, to the conventions of literary analysis, and to the literature option for English majors. Reading, writing, and research skills will be stressed, along with interpretative approaches to major genres within the field.	3 Credits

	LIT 202L - The Environmental Imagination Course is designed to introduce students to the many discourses of nature. In this course we will approach “natural history” as a complex literary genre grounded in personal experience of the “more-than-human” world (in David Abram’s now ubiquitous phrase). While the study of natural history writing has historically focused on authors like Gilbert White, Henry David Thoreau, John Muir, and John Burroughs (as prominent practitioners of the personal narrative essay that explores the natural world), a more thorough understanding of the genre requires consideration of the role race, class, and gender play in shaping discourses of nature. Further, consideration of non-Anglo-American traditions (including, for example, a range of Native American and Asian “literary” practices) expands our understanding of those traditions as it allows us to see the Anglo-American tradition in useful perspective.	3 Credits
	LIT 210L - American Lit I Offered every term. Representative texts from the pre-colonial period through the Civil War.	3 Credits
	LIT 221L - Brit Lit: Enlightenment to Rom Offered every term. Representative texts from the seventeenth through the eighteenth century.	3 Credits
	LIT 300 - Literary Criticism Offered every term. Prereq. or coreq., 12 credits of lower-division English courses. Study of various literary theories and their application to literary texts.	3 Credits
	LIT 327 - Shakespeare Offered autumn and spring. Prereq., LIT 300 or consent of instr. A survey of selected Shakespeare plays emphasizing close reading of the texts and consideration of their dramatic possibilities.	3 Credits
	LIT 373 - Lit & Environment Offered autumn. Prereq., LIT 210L or 211L (ENLT 224L or 225L) and LIT 300 (ENLT 301) or consent of instr. Study of major texts and issues in American nature writing.	3 Credits
	LIT 402 - Literature in Place This course gives students a set of advanced learning opportunities to engage with Anglophone texts on the general theme of nature and culture, applying an ecocritical lens to extended literary analysis. Drawing from various periods and from various trans-Atlantic national literatures, the course is designed to focus on the emerging critique of nature and culture that questions foundational structures of epistemology and economy, animate and inanimate, civilization and wilderness.	3 Credits
	LIT 422 - Ecocritical Theory & Practice Prereq., or coreq., LIT 300. This course surveys the developing field of ecocriticism, introducing students to the major issues and methodologies entailed in the study of literature and the environment.	3 Credits
Minimum Required Grade: C-		27 Total Credits Required

Upper-Division English Elective Courses

Rule: Must complete three 300- or 400-level English courses

Note: Students must elect nine (9) credits, one course from each of the following designations: A (Medieval through early modern British Literature); B (Enlightenment through Romantic British Literature, or Pre-1865 American Literature); D (diversity).
Designations A and B can be satisfied fully or in part at the 200-level. When a student elects this option, he or she must select other 300+ level Literature electives to ensure completion of 42 credits and the requisite 12 upper-division LIT credits. Designations of course offerings for each semester will be posted in the English Department.

Minimum Required Grade: C-

9 Total Credits Required

Senior Seminar

	Course	Credits
	LIT 494 - Seminar: Lit Capstone (R 9) Offered autumn and spring. Prereq., LIT 300 and nine credits in literature courses numbered higher than 300. Required for completing the English literature option, this seminar will allow students to conduct advanced studies in literary figures and topics chosen by faculty to engage a broad range of interests. A long research paper is required.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Foreign Language

Note: Foreign Language: Two years of a SINGLE modern or classical language or the equivalent (200+ level) score on a competency exam is required.

An approved complementary course from a discipline other than English

Minimum Required Grade: C-

3 Total Credits Required

Biochemistry

Bruce E. Bowler, Program Director

The Biochemistry Program is a joint program between the Department of Chemistry and Biochemistry and the Division of Biological Sciences. Biochemistry is an interdisciplinary science that integrates chemistry and biology to understand the molecular basis of life. The program offers a B.S. in Biochemistry and M.S. and Ph.D. degrees in Biochemistry & Biophysics.

Undergraduate majors receive a solid foundation in both chemistry and biology. Biochemistry courses are usually taken in the junior year allowing majors to become involved in research with faculty and to take electives in their senior year. The major also introduces students to computer science and bioinformatics, essential tools in modern biochemistry. The B.S. in Biochemistry prepares students for advanced degrees in biochemistry or biophysics, for medical, dental or veterinary schools and for careers in the pharmaceutical and biotechnology industries. A Health Professions option is also offered within the B.S. in Biochemistry for students whose career goals are in fields related to biochemistry. This option allows more flexibility in upper division electives, permitting students to tailor the degree to their needs. Students desiring a basic grounding in biochemistry to complement their primary major can choose to pursue a minor in Biochemistry.

The graduate degrees in Biochemistry & Biophysics prepare students to be independent researchers in academic laboratories or in the biotechnology and pharmaceutical industries. Through coursework and independent research, graduate students in this program will become adept at the physical and structural methods necessary to probe important problems in the life sciences at the molecular level. In collaboration with the Center for Biomolecular Structure & Dynamics, the Biochemistry Program provides state-of-the-art facilities for research in biochemistry, biophysics and structural biology.

Prospective students desiring further information on these degrees should contact the Program Director by visiting the Biochemistry Program web site.

High School Preparation: In addition to the general University admission requirements, it is strongly recommended that a student take four years of mathematics, four years of science, and a foreign language.

Department Faculty

Professor

Bruce Bowler, Professor and Director, Biochemistry Program
J. Stephen Lodmell, Professor
J.B. Alexander (Sandy) Ross, Professor of Chemistry and Biochemistry
D. Scott Samuels, Professor
Stephen Sprang, Professor, DBS & Director, CBSD
Kent Sugden, Professor of Chemistry and Biochemistry

Associate Professor

Klara Briknarova, Associate Professor
Bradley Layton, Energy Technology Program Director/Associate Professor

Assistant Professor

Kasper Hansen, Assistant Professor
Brent Ryckman, Associate Professor
Ekaterina Voronina, Assistant Professor
Travis Wheeler, Assistant Professor, Assistant Chair of Computer Science

Emeritus

Walter Hill, Professor Emeritus
Travis Hughes, Assistant Professor

Biochemistry

Back to Top

- BCH 110 - Intro Biology for Biochemists

  Credits: 3. Offered spring. Prereq. CHMY 141N or equivalent. Prereq. or Coreq., CHMY 143N. Coreq., BCH 111. An introductory course that explores biomolecules and their roles in life processes. Provides a foundation for Cellular and Molecular Biology (BIOB 260), Genetics and Evolution (BIOB 272), Introductory Biochemistry Seminar (BCH 294), and many other advanced science courses.

- BCH 111 - Intro Biol for Biochemists Lab

  Credits: 1. Offered spring. Prereq., CHMY 141N or equivalent. Prereq., or Coreq., CHMY 143N. Coreq., BCH 110. Introduction to the experimental techniques used to study biomolecules and their roles in life processes. Provides a foundation for other advanced level laboratory courses in chemistry and biochemistry.

- BCH 294 - Seminar/Workshop

  Credits: 1. Offered spring. Prereq., BCH 110/111 or equivalent. An introduction to important advances in biochemistry through readings from the primary literature and discussion of this literature. Faculty members will also make presentations on their research. Graded credit/no credit.

- BCH 380 - Biochemistry

  Credits: 4. Offered autumn and spring. Prereq., CHMY 223 or BIOB 260. Fundamental biochemistry; chemistry and metabolism of biomolecules, energy relationships in metabolism; storage, transmission, and expression of genetic information. Credit not allowed for both BCH 380 and 480-482.

- BCH 480 - Advanced Biochemistry I

Credits: 3. Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.

- BCH 482 - Advanced Biochemistry II

  Credits: 3. Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.

- BCH 486 - Biochemistry Research Lab

  Credits: 3. Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.

- BCH 490 - Undergraduate Research

  Credits: 1 TO 10. (R-10) Offered every term. Consent of instr. Independent research under the direction of a faculty member. Course Attributes: Research & Creative Schlrshp

- BCH 491 - Special Topics

  Credits: 1 TO 10. (R-10) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- BCH 499 - Senior Thesis/Capstone

  Credits: 3 TO 6. (R-6) Offered every term. Prereq., senior standing and consent of instr. Preparation of a thesis or manuscript based on undergraduate research for presentation and/or publication. Student must give an oral or poster presentation at the Undergraduate Research Symposium or a scientific meeting.

- BCH 547 - Exptl Mol/Cell/Chem Biol

  Credits: 1. (R-8) Offered every term. Prereq., graduate standing or consent of instr. Same as BIOB 547. Focus on experimental design, methods, and presentation of experimental results for graduate students in laboratories with a molecular, cellular or chemical biological focus. Level: Graduate

- BCH 561 - RNA Structure & Function

  Credits: 1. (R-8) Offered every semester. Prereq., BCH 482, BIOB 260, and consent of instr. Exploration of current scientific literature and new data that focuses on RNA biochemistry. Emphasis on literature relevant to research on RNA viruses and ribosomes and protein synthesis. Level: Graduate

- BCH 570 - Intro to Research

  Credits: 1. (R-2) Offered autumn and spring. Prereq., graduate standing. Required course for Biochemistry and Biophysics graduate students. Students are acquainted with faculty research projects. Instruction in basic research techniques, research equipment. Introduction to relevant scientific research literature. Level: Graduate

- BCH 581 - Physical Biochemistry

  Credits: 3. Offered spring odd-numbered years. Prereq., CHMY 360 or CHMY 373 or CHMY 371; BCH 480. Techniques of physical chemistry used in studying biological structure and function of macromolecules. Emphasis is on spectroscopic methods, hydrodynamic methods and x-ray and other scattering and diffraction techniques. Level: Graduate

- BCH 582 - Proteins and Enzymes

  Credits: 3. Offered autumn even-numbered years. Prereq., BCH 482 or equivalent. An investigation into the structure/function relationship in proteins and a detailed exploration of enzyme kinetics, using examples from current literature. Level: Graduate

- BCH 584 - Nucleic Acids

  Credits: 3. Offered autumn odd-numbered years. Prereq., BCH 482 or equivalent. Emphasis on critical reading of current literature that investigates structure, chemistry, and function of nucleic acids. Level: Graduate

- BCH 595 - Special Topics

Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., graduate standing and consent of instr. Experimental offering of new courses by resident or visiting faculty. Level: Graduate

- BCH 597 - Research
  Credits: 1 TO 18. (R-18) Offered intermittently. Directed individual research and study appropriate to the background and objectives of the student. Level: Graduate
- BCH 599 - Thesis
  Credits: 1 TO 10. (R-10) Offered intermittently. Prereq., master's student in biochemistry and biophysics. Laboratory research for and preparation of a master's thesis. Level: Graduate
- BCH 600 - Cell Organization & Mechanisms
  Credits: 3. Offered spring even-numbered years. Prereq., BCH 480 or consent of instr. Same as BMED 600. Primary literature exploration of the regulation of structure, function, and dynamics of eukaryotic cells. Topics include membranes, cytoskeleton, transcription, translation, signal transduction, cell motility, cell proliferation, and programmed cell death. Level: Graduate
- BCH 694 - Biochemistry & Biophysics Sem.
  Credits: 1. (R-10) Credit/No credit only. Offered Autumn and Spring. Prereq., graduate standing or consent of instructor. Presentation of current research in Structural Biology, Biochemistry, Biophysics, or related fields by invited outside speakers, UM faculty, and senior graduate students. Level: Graduate
- BCH 699 - Dissertation
  Credits: 1 TO 20. (R-20) Offered intermittently. Prereq., doctoral student in biochemistry. Laboratory research for and preparation of a doctoral dissertation. Level: Graduate

Biochemistry B.S.

The Biochemistry Program is a joint program between the Department of Chemistry and Biochemistry and the Division of Biological Sciences. Biochemistry is an interdisciplinary science that integrates chemistry and biology to understand the molecular basis of life. The program offers a B.S. in Biochemistry and M.S. and Ph.D. degrees in Biochemistry & Biophysics.

Undergraduate majors receive a solid foundation in both chemistry and biology. Biochemistry courses are usually taken in the junior year allowing majors to become involved in research with faculty and to take electives in their senior year. The major also introduces students to computer science and bioinformatics, essential tools in modern biochemistry. The B.S. in Biochemistry prepares students for advanced degrees in biochemistry or biophysics, for medical, dental or veterinary schools and for careers in the pharmaceutical and biotechnology industries. A Health Professions option is also offered within the B.S. in Biochemistry for students whose career goals are in fields related to biochemistry. This option allows more flexibility in upper division electives, permitting students to tailor the degree to their needs.

The graduate degrees in Biochemistry & Biophysics prepare students to be independent researchers in academic laboratories or in the biotechnology and pharmaceutical industries. Through coursework and independent research, graduate students in this program will become adept at the physical and structural methods necessary to probe important problems in the life sciences at the molecular level. In collaboration with the Center for Biomolecular Structure & Dynamics, the Biochemistry Program provides state-of-the-art facilities for research in biochemistry, biophysics and structural biology.

Prospective students desiring further information on these degrees should contact the Program Director by visiting the Biochemistry Program web site: http://www.cas.umt.edu/chemistry/biochemistryProgram/.

Bachelor of Science - Biochemistry

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 96

Required Cumulative GPA: 2.0

Lower Division Core

Rule: Must complete the following subcategories

54 Total Credits Required

Biochemistry

Rule: All of the following courses are required

	Course	Credits
	BCH 110 - Intro Biology for Biochemists Offered spring. Prereq. CHMY 141N or equivalent. Prereq. or Coreq., CHMY 143N. Coreq., BCH 111. An introductory course that explores biomolecules and their roles in life processes. Provides a foundation for Cellular and Molecular Biology (BIOB 260), Genetics and Evolution (BIOB 272), Introductory Biochemistry Seminar (BCH 294), and many other advanced science courses.	3 Credits
	BCH 111 - Intro Biol for Biochemists Lab Offered spring. Prereq., CHMY 141N or equivalent. Prereq., or Coreq., CHMY 143N. Coreq., BCH 110. Introduction to the experimental techniques used to study biomolecules and their roles in life processes. Provides a foundation for other advanced level laboratory courses in chemistry and biochemistry.	1 Credits
	BCH 294 - Seminar/Workshop Offered spring. Prereq., BCH 110/111 or equivalent. An introduction to important advances in biochemistry through readings from the primary literature and discussion of this literature. Faculty members will also make presentations on their research. Graded credit/no credit.	1 Credits
Minimum Required Grade: C-		5 Total Credits Required

Biology

Rule: All of the following courses are required

	Course	Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits

Minimum Required Grade: C-	8 Total Credits Required

General and Organic Chemistry

Rule: All of the following courses are required

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
Minimum Required Grade: C-		20 Total Credits Required

Physics

Rule: All of the following courses are required

	Course	Credits
	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits

	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Mathematics

Rule: All of the following courses are required

	Course	Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Computer Science

Rule: The following course is required

Note: We advise that students take CSCI 250 in their third year after completing lower division biochemistry, biology, chemistry, mathematics and physics coursework.

	Course	Credits

	CSCI 250 - Computer Mdlng/Science Majors Offered autumn. Prereq., basic computer and spreadsheet literacy; coreq., M 162 or 171. An introduction to programming in Python with an emphasis on problems arising in the sciences, including: function plotting, data fitting, file input/output, solving ordinary differential equations, matrix manipulation, and sensor networks. A student can take at most one of CSCI 172, CSCI 250, CRT 280, and CRT 281 for credit.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Upper Division Core

Rule: Must complete the following subcategories

29 Total Credits Required

Biochemistry

Rule: All of the following courses are required

	Course	Credits
	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Biology

Rule: The following course is required

	Course	Credits

	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Analytical Chemistry

Rule: All of the following courses are required

	Course	Credits
	CHMY 311 - Analytical Chem-Quant Analysis Offered autumn. Prereq., one year of college chemistry, including laboratory. Classroom and laboratory work in gravimetric, volumetric, colorimetric and electrochemical methods of analysis; theory of errors; ionic equilibria in aqueous solutions.	4 Credits
	CHMY 421 - Advanced Instrument Analysis Offered spring. Prereq., CHMY 311. Theory and use of instrumental methods in the study of analytical and physical chemistry.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Inorganic Chemistry

Rule: The following course is required

	Course	Credits
	CHMY 401 - Advanced Inorganic Chemistry Offered autumn. Prereq., CHMY 223 AND 360 OR 373 or consent of instr. Theory and principles of inorganic chemistry and a systematic coverage of descriptive inorganic chemistry in the context of the periodic table.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Physical Chemistry

Rule: Choose 1 of the following courses

Note: Students planning to attend graduate school in biochemistry or biophysics are strongly advised to take the CHMY 373-371 sequence

	Course	Credits

	CHMY 360 - Applied Physical Chemistry Offered spring. Prereq., CHMY 123 OR 143 AND M 162. Basic thermodynamics and chemical kinetics with applications in the biological and environmental sciences. Credit not allowed for both 360 and 373.	3 Credits
	CHMY 373 - Phys Chem-Kntcs & Thrmdynmcs Offered autumn. Prereq., CHMY 143N, M 273, PHSX 207N or 217N. Systematic treatment of the laws and theories relating to chemical phenomena. Credit not allowed for both CHMY 360 and 373.	4 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Computer Science

Rule: The following course is required

	Course	Credits
	CSCI 451 - Computational Biology Offered Autumn. Designed for attendance by both computer scientists and biologists. The course will explore the interdisciplinary nature at the juncture of the two fields. Students will be introduced to bioinformatics (emphasis: computational genomics), with exposure to fundamental problems, algorithms, and tools in the field. This includes a basic introduction to genomics, along with in-depth coverage of algorithms and methods relevant to modern computational genomics, including: biological sequence alignment, sequence database homology search, and phylogeny inference. The programming expectations are limited for a 400-level computer science course, but at least one semester of a programming-intensive course is required. Credit not allowed for CSCI 558 and this course	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Advanced Electives

Rule: Choose 13 credits from the courses listed

Note: No more than 3 credits combined of BIOB 490, CHMY 490, CHMY 498 and BCH 490. No more than 3 credits combined of CHMY 397 and CHMY 494.

	Course	Credits
	BCH 490 - Undergraduate Research (R-10) Offered every term. Consent of instr. Independent research under the direction of a faculty member.	1 To 10 Credits
	BIOB 301 - Developmental Biology Offered autumn. Prereq., BIOB 260; BIOB 272 recommended. An analysis of the origin and development of form and patterns in organisms, stressing the processes of growth and differentiation in plants and animals. Graded traditional letter grade only.	3 Credits

	BIOB 375 - General Genetics Offered spring. Prereq., BIOB 260 and 272. This course will focus on the molecular genetics of eukaryotes, with special emphasis on transmission genetics and gene structure and regulation.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 440 - Biological Electron Microscopy Offered spring. Prereq., senior standing or consent of instr. Theory of electron microscopy, recent developments in transmission and scanning electron microscopy. Limited experience with the instruments.	2 Credits
	BIOB 486 - Genomics Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.	3 Credits
	BIOB 490 - Adv Undergrad Research (R-10) Offered every term. Prereq., junior or senior standing and consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit.	1 To 10 Credits
	BIOH 360 - Intro Neuroscience Offered autumn. Prereq., introductory chemistry and biology. Same as BMED 347. The molecular and cellular physiology of the human nervous system. Topics range from the basis of electrical and chemical signaling in neurons to the organization of the nervous system and its functions in generating behavior.	3 Credits
	BIOH 365 - Human AP I for Health Profsns Offered autumn. Prereq., CHMY 121N or CHMY 141N; BIOB 160N or BIOH 112 or 113. Introduction to basic cellular structure and function. The fundamental facts and concepts of the anatomy and physiology of cells and tissues, the integumentary, musculoskeletal, nervous and special senses with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
	BIOH 370 - Human AP II for Health Profsns Offered spring. Prereq., BIOH 365. The fundamental facts and concepts of the anatomy and physiology of the endocrine, circulatory, respiratory, digestive, urinary and reproductive systems with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
	BIOH 405 - Hematology Offered autumn. Prereq., junior level or consent of instr., BIOM 360. Study of blood and diseases of the circulatory system. Blood banking and serology.	3 Credits

	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
	BIOM 400 - Medical Microbiology Offered autumn. Microbial structure and functions, pathogenic microorganisms, virology, immunology. Credit not allowed toward a major in microbiology.	3 Credits
	BIOM 410 - Microbial Genetics Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.	3 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOM 428 - General Parasitology Lab Offered autumn. Coreq., BIOM 427. Taxonomy, morphology and identification of parasitic protozoa, helminths and arthropods.	2 Credits
	BIOM 435 - Virology Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535.	3 Credits
	CHMY 371 - Phys Chem-Qntm Chm & Spctrscpy Offered spring. Prereq., CHMY 373. Systematic treatment of the laws and theories relating to chemical phenomena.	4 Credits
	CHMY 397 - Teaching Chemistry Offered every term. Prereq., CHMY 141N-143N with B or better and consent of instr. Methods of peer-led team learning as applied to general chemistry instruction. Review of concepts from general chemistry. Student leaders mentor a team of general chemistry students in working toward constructing chemistry knowledge and developing problem-solving skills.	1 Credits

	CHMY 402 - Advanced Inorganic Chem Lab Offered spring. Prereq., CHMY 224 AND 360 or 373 and consent of instr. Preparation of inorganic and coordination compounds. Isolation and characterization by ion exchange, column chromatography, IR, UV-VIS, derivatives, MP, and BP.	2 Credits
	CHMY 403 - Descriptive Inorganic Chem Offered spring. Prereq., CHMY 221-222, 360 or 373-371, and 401. A survey of the chemistry of the elements including transition metal reaction mechanisms, redox chemistry, organometallic chemistry, bioinorganic chemistry.	3 Credits
	CHMY 442 - Aquatic Chemistry Offered autumn odd-numbered years. Prereq., CHMY 311 or consent of instr. Application of chemical equilibria theory for understanding and modeling chemical processes in natural waters with an emphasis on spreadsheet computations. In depth examination of concepts such as pH, alkalinity, buffering, and solubility as they apply to natural waters.	3 Credits
	CHMY 465 - Organic Spectroscopy Offered intermittently. Prereq., CHMY 360 or 373 and one year of organic chemistry or consent of instr. Theory and interpretation of the NMR, IR, UV, and mass spectra of organic compounds with the goal of structure identification.	3 Credits
	CHMY 466 - FT-NMR Optn for Undrgrd Rsrch Offered intermittently. Prereq., CHMY 221-222; research project using NMR; consent of instr. Operation of the FT-NMR spectrometer and brief background of NMR spectroscopy.	1 Credits
	CHMY 485 - Laboratory Safety Offered autumn. Prereq., one year of college chemistry. Awareness of and methods of control of hazards encountered in laboratory work. Awareness of legal constraints on work with chemicals. Sources of information regarding chemical hazards.	1 Credits
	CHMY 490 - Undergraduate Research Undergraduate Research Variable cr (R-9). Offered autumn, spring, and summer. Prereq., consent of instr. Laboratory investigations and research in the laboratory of a faculty member.	1 To 9 Credits
	CHMY 494 - Seminar/Workshop (R-9) Offered autumn and spring. Prereq., consent of instr. Laboratory investigations and research in the laboratory of a faculty member.	1 To 9 Credits
	CHMY 498 - Internship/Cooperative Educ Prereq., consent of department. Extended non-classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 6 Credits
	PHAR 421 - Medicinal Chem I Offered autumn. The chemistry of organic compounds used medicinally and their biochemical mechanisms of action.	3 Credits

	PHAR 422 - Medicinal Chem II Offered spring. Prereq., BMED 421. Continuation of 421.	3 Credits
Minimum Required Grade: C-		13 Total Credits Required

Biochemistry Health Professions

The B.S. in Biochemistry prepares students for advanced degrees in biochemistry or biophysics, for medical, dental or veterinary schools and for careers in the pharmaceutical and biotechnology industries. A Health Professions option is also offered within the B.S. in Biochemistry for students whose career goals are in fields related to biochemistry. This option allows more flexibility in upper division electives, permitting students to tailor the degree to their needs.

Bachelor of Science - Biochemistry; Health Professions Option

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 99
Required Cumulative GPA: 2.0

Lower Division Core

Rule: Must complete the following subcategories

50 Total Credits Required

Biochemistry

Rule: All of the following courses are required

	Course	Credits
	BCH 110 - Intro Biology for Biochemists Offered spring. Prereq. CHMY 141N or equivalent. Prereq. or Coreq., CHMY 143N. Coreq., BCH 111. An introductory course that explores biomolecules and their roles in life processes. Provides a foundation for Cellular and Molecular Biology (BIOB 260), Genetics and Evolution (BIOB 272), Introductory Biochemistry Seminar (BCH 294), and many other advanced science courses.	3 Credits
	BCH 111 - Intro Biol for Biochemists Lab Offered spring. Prereq., CHMY 141N or equivalent. Prereq., or Coreq., CHMY 143N. Coreq., BCH 110. Introduction to the experimental techniques used to study biomolecules and their roles in life processes. Provides a foundation for other advanced level laboratory courses in chemistry and biochemistry.	1 Credits

	BCH 294 - Seminar/Workshop Offered spring. Prereq., BCH 110/111 or equivalent. An introduction to important advances in biochemistry through readings from the primary literature and discussion of this literature. Faculty members will also make presentations on their research. Graded credit/no credit.	1 Credits
Minimum Required Grade: C-		5 Total Credits Required

Biology

Rule: All of the following courses are required

	Course	Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

General and Organic Chemistry

Rule: All of the following courses are required

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits

	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 222 - Org Chm I Lab Offered autumn. Coreq., CHMY 221; prereq., one semester of 100-level laboratory. Microscale techniques are emphasized.	2 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
	CHMY 224 - Org Chm II Lab Offered spring. Prereq., CHMY 222; prereq. or coreq., CHMY 223.	2 Credits
Minimum Required Grade: C-		20 Total Credits Required

Physics

Rule: Either the PHSX 205N-208N or the PHSX 215N-218N sequence may be completed

	Course	Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits

	PHSX 215N - Fund of Physics w/Calc I Offered autumn. Prereq. or coreq., PHSX 216N and M 171 or equiv. This course satisfies the lecture portion of medical and technical school requirements in general physics. Mechanics, fluids, waves and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 216N - Physics Laboratory I w/Calc Offered autumn. Coreq., PHSX 215N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Mechanics, fluids, waves, and sound. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
	PHSX 217N - Fund of Physics w/Calc II Offered spring. Prereq., PHSX 215N, and prereq. or coreq. PHSX 218, and prereq. or coreq., M 172 or equivalent. This course satisfies the lecture portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	4 Credits
	PHSX 218N - Physics Laboratory II w/Calc Offered spring. Prereq., PHSX 215N, coreq., PHSX 217N. This course satisfies the laboratory portion of medical and technical school requirements in general physics. Heat, electricity, magnetism, and light. Credit not allowed for both PHSX 215N-216N-217N-218N and 205N-206N-207N-208N.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Mathematics

Rule: Either the M162/M263 sequence or the M171/M172 sequence may be completed

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits

	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
	M 263 - Applied Differential Equations Offered spring. Prereq., one of M 162, 171 or 181 and knowledge of basic trigonometry. Solution of ordinary differential equations and systems with emphasis on applications, numerical methods and computer software.	3 Credits
Minimum Required Grade: C-		7-8 Total Credits Required

Upper Division Core

Rule: Must complete the following subcategories

25 Total Credits Required

Biochemistry

Rule: All of the following courses are required

	Course	Credits
	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Microbiology

Rule: The following course is required

	Course	Credits
	BIOM 360 - Gen Microbiolgy (equiv to 260) Offered autumn. Prereq., CHMY 123 or 143N; Prereq. or coreq., BIOB 260. Microbial structure and function, growth and reproduction, physiology, ecology, genetics, environmental factors, control of microorganisms and sterility, antimicrobial agents, microbial diversity.	3 Credits

Minimum Required Grade: C-	5 Total Credits Required

Analytical Chemistry

Rule: All of the following courses are required

	Course	Credits
	CHMY 311 - Analytical Chem-Quant Analysis Offered autumn. Prereq., one year of college chemistry, including laboratory. Classroom and laboratory work in gravimetric, volumetric, colorimetric and electrochemical methods of analysis; theory of errors; ionic equilibria in aqueous solutions.	4 Credits
	CHMY 421 - Advanced Instrument Analysis Offered spring. Prereq., CHMY 311. Theory and use of instrumental methods in the study of analytical and physical chemistry.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Inorganic Chemistry

Rule: The following course is required

	Course	Credits
	CHMY 401 - Advanced Inorganic Chemistry Offered autumn. Prereq., CHMY 223 AND 360 OR 373 or consent of instr. Theory and principles of inorganic chemistry and a systematic coverage of descriptive inorganic chemistry in the context of the periodic table.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Physical Chemistry

Rule: Choose 1 of the following courses

	Course	Credits
	CHMY 360 - Applied Physical Chemistry Offered spring. Prereq., CHMY 123 OR 143 AND M 162. Basic thermodynamics and chemical kinetics with applications in the biological and environmental sciences. Credit not allowed for both 360 and 373.	3 Credits
	CHMY 373 - Phys Chem-Kntcs & Thrmdynmcs Offered autumn. Prereq., CHMY 143N, M 273, PHSX 207N or 217N. Systematic treatment of the laws and theories relating to chemical phenomena. Credit not allowed for both CHMY 360 and 373.	4 Credits

Minimum Required Grade: C-	3-4 Total Credits Required

Biology Laboratory Course

Rule: Choose one of the following lab courses

	Course	Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 440 - Biological Electron Microscopy Offered spring. Prereq., senior standing or consent of instr. Theory of electron microscopy, recent developments in transmission and scanning electron microscopy. Limited experience with the instruments.	2 Credits
	BIOM 361 - Gen Microbiolgy Lb (equiv 261) Offered autumn. Prereq. or coreq., BIOM 360. Basic microbiology procedures and techniques.	2 Credits
	BIOM 428 - General Parasitology Lab Offered autumn. Coreq., BIOM 427. Taxonomy, morphology and identification of parasitic protozoa, helminths and arthropods.	2 Credits
Minimum Required Grade: C-		2 Total Credits Required

Advanced Electives

Rule: Choose 21 credits from the courses listed

Note: No more than 3 credits combined of BIOB 490, CHMY 490, CHMY 498 and BCH 490. No more than 3 credits combined of CHMY 397 and CHMY 494.

	Course	Credits
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
	BCH 490 - Undergraduate Research (R-10) Offered every term. Consent of instr. Independent research under the direction of a faculty member.	1 To 10 Credits
	BIOB 301 - Developmental Biology Offered autumn. Prereq., BIOB 260; BIOB 272 recommended. An analysis of the origin and development of form and patterns in organisms, stressing the processes of growth and differentiation in plants and animals. Graded traditional letter grade only.	3 Credits

	BIOB 375 - General Genetics Offered spring. Prereq., BIOB 260 and 272. This course will focus on the molecular genetics of eukaryotes, with special emphasis on transmission genetics and gene structure and regulation.	3 Credits
	BIOB 410 - Immunology Offered autumn. Prereq., BIOB 260. Current concepts and methods in Immunology.	3 Credits
	BIOB 411 - Immunology Laboratory Offered autumn. Coreq., BIOB 410. Modern techniques for analysis of immune responses.	2 Credits
	BIOB 425 - Adv Cell & Molecular Biology Offered spring. Prereq., BIOB 260 and 272; BCH 380 strongly recommended. Cell structure and function, cell cycle, cellular signaling, molecular basis of cancer, regulated cell death, membrane transport, organelle dynamics, cytoskeleton, cell adhesion, and the molecular basis of learning and memory.	3 Credits
	BIOB 440 - Biological Electron Microscopy Offered spring. Prereq., senior standing or consent of instr. Theory of electron microscopy, recent developments in transmission and scanning electron microscopy. Limited experience with the instruments.	2 Credits
	BIOB 486 - Genomics Offered autumn. Prereq., BIOB 272. Principles and mechanisms of genome biology of animals and microbes, including genome function, evolution, and basic molecular and computational methodology used in genome biology.	3 Credits
	BIOB 490 - Adv Undergrad Research (R-10) Offered every term. Prereq., junior or senior standing and consent of instr. Independent research under the direction of a faculty member. Graded credit/no credit.	1 To 10 Credits
	BIOH 360 - Intro Neuroscience Offered autumn. Prereq., introductory chemistry and biology. Same as BMED 347. The molecular and cellular physiology of the human nervous system. Topics range from the basis of electrical and chemical signaling in neurons to the organization of the nervous system and its functions in generating behavior.	3 Credits
	BIOH 365 - Human AP I for Health Profsns Offered autumn. Prereq., CHMY 121N or CHMY 141N; BIOB 160N or BIOH 112 or 113. Introduction to basic cellular structure and function. The fundamental facts and concepts of the anatomy and physiology of cells and tissues, the integumentary, musculoskeletal, nervous and special senses with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
	BIOH 370 - Human AP II for Health Profsns Offered spring. Prereq., BIOH 365. The fundamental facts and concepts of the anatomy and physiology of the endocrine, circulatory, respiratory, digestive, urinary and reproductive systems with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits

	BIOH 405 - Hematology Offered autumn. Prereq., junior level or consent of instr., BIOM 360. Study of blood and diseases of the circulatory system. Blood banking and serology.	3 Credits
	BIOH 462 - Principles Medical Physiology Offered spring. Prereq., C (2.00) or better in BIOH 365, 370, and either CHMY 123 or 143N or consent of instr. An advanced course in human physiology for students preparing for careers in health care.	3 Credits
	BIOM 400 - Medical Microbiology Offered autumn. Microbial structure and functions, pathogenic microorganisms, virology, immunology. Credit not allowed toward a major in microbiology.	3 Credits
	BIOM 410 - Microbial Genetics Offered spring. Prereq., BIOM 360 and 361. The molecular genetics of prokaryotic organisms including: structure and replication of the prokaryotic chromosome; gene expression; mutagenesis and DNA repair; plasmids and other tools of genetic engineering; transmission of genetic material and recombination in prokaryotes; regulation of gene expression in prokaryotes; recombinant DNA and biotechnology.	3 Credits
	BIOM 411 - Exprmntl Microbial Genetcs Lab Offered spring. Prereq. or coreq., BIOM 410. Experiments in microbial genetics: Analysis of genes and genomes.	1 Credits
	BIOM 427 - General Parasitology Offered autumn. Prereq., BIOB 272. Parasitism as a biological phenomenon, origin of parasitism, adaptations and life cycles, parasite morphology, fine structure, physiology, parasites and their environment.	2 Credits
	BIOM 428 - General Parasitology Lab Offered autumn. Coreq., BIOM 427. Taxonomy, morphology and identification of parasitic protozoa, helminths and arthropods.	2 Credits
	BIOM 435 - Virology Offered spring. Prereq., BIOB 260, and either BIOM 360 or BIOM 400. The general nature of viruses, with emphasis on the molecular biology of animal and human viruses. Co-convenes with BIOM 535.	3 Credits
	CHMY 371 - Phys Chem-Qntm Chm & Spctrscpy Offered spring. Prereq., CHMY 373. Systematic treatment of the laws and theories relating to chemical phenomena.	4 Credits
	CHMY 397 - Teaching Chemistry Offered every term. Prereq., CHMY 141N-143N with B or better and consent of instr. Methods of peer-led team learning as applied to general chemistry instruction. Review of concepts from general chemistry. Student leaders mentor a team of general chemistry students in working toward constructing chemistry knowledge and developing problem-solving skills.	1 Credits
	CHMY 402 - Advanced Inorganic Chem Lab Offered spring. Prereq., CHMY 224 AND 360 or 373 and consent of instr. Preparation of inorganic and coordination compounds. Isolation and characterization by ion exchange, column chromatography, IR, UV-VIS, derivatives, MP, and BP.	2 Credits

	CHMY 403 - Descriptive Inorganic Chem Offered spring. Prereq., CHMY 221-222, 360 or 373-371, and 401. A survey of the chemistry of the elements including transition metal reaction mechanisms, redox chemistry, organometallic chemistry, bioinorganic chemistry.	3 Credits
	CHMY 442 - Aquatic Chemistry Offered autumn odd-numbered years. Prereq., CHMY 311 or consent of instr. Application of chemical equilibria theory for understanding and modeling chemical processes in natural waters with an emphasis on spreadsheet computations. In depth examination of concepts such as pH, alkalinity, buffering, and solubility as they apply to natural waters.	3 Credits
	CHMY 465 - Organic Spectroscopy Offered intermittently. Prereq., CHMY 360 or 373 and one year of organic chemistry or consent of instr. Theory and interpretation of the NMR, IR, UV, and mass spectra of organic compounds with the goal of structure identification.	3 Credits
	CHMY 466 - FT-NMR Optn for Undrgrd Rsrch Offered intermittently. Prereq., CHMY 221-222; research project using NMR; consent of instr. Operation of the FT-NMR spectrometer and brief background of NMR spectroscopy.	1 Credits
	CHMY 485 - Laboratory Safety Offered autumn. Prereq., one year of college chemistry. Awareness of and methods of control of hazards encountered in laboratory work. Awareness of legal constraints on work with chemicals. Sources of information regarding chemical hazards.	1 Credits
	CHMY 490 - Undergraduate Research Undergraduate Research Variable cr (R-9). Offered autumn, spring, and summer. Prereq., consent of instr. Laboratory investigations and research in the laboratory of a faculty member.	1 To 9 Credits
	CHMY 494 - Seminar/Workshop (R-9) Offered autumn and spring. Prereq., consent of instr. Laboratory investigations and research in the laboratory of a faculty member.	1 To 9 Credits
	CHMY 498 - Internship/Cooperative Educ Prereq., consent of department. Extended non-classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 6 Credits
	PHAR 421 - Medicinal Chem I Offered autumn. The chemistry of organic compounds used medicinally and their biochemical mechanisms of action.	3 Credits
	PHAR 422 - Medicinal Chem II Offered spring. Prereq., BMED 421. Continuation of 421.	3 Credits
Minimum Required Grade: C-		21 Total Credits Required

Ethics

Rule: Complete the following course

	Course	Credits
	CHMY 305E - Ethics and Writing in Science Offered autumn and spring. Prereq., CHMY 223 and chemistry or biochemistry majors. Practicum for developing and improving skills in scientific writing and evaluation. Presentation, discussion and written evaluations of standard ethics traditions and ethical issues related to the professional practice of science. Use of library and search tools to access current literature in chemistry.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Biochemistry Minor

The Biochemistry Program is a joint program between the Department of Chemistry and Biochemistry and the Division of Biological Sciences. Biochemistry is an interdisciplinary science that integrates chemistry and biology to understand the molecular basis of life. The program offers a B.S. in Biochemistry and M.S. and Ph.D. degrees in Biochemistry & Biophysics.

Undergraduate majors receive a solid foundation in both chemistry and biology. Biochemistry courses are usually taken in the junior year allowing majors to become involved in research with faculty and to take electives in their senior year. The major also introduces students to computer science and bioinformatics, essential tools in modern biochemistry. The B.S. in Biochemistry prepares students for advanced degrees in biochemistry or biophysics, for medical, dental or veterinary schools and for careers in the pharmaceutical and biotechnology industries. A Health Professions option is also offered within the B.S. in Biochemistry for students whose career goals are in fields related to biochemistry. This option allows more flexibility in upper division electives, permitting students to tailor the degree to their needs.

The graduate degrees in Biochemistry & Biophysics prepare students to be independent researchers in academic laboratories or in the biotechnology and pharmaceutical industries. Through coursework and independent research, graduate students in this program will become adept at the physical and structural methods necessary to probe important problems in the life sciences at the molecular level. In collaboration with the Center for Biomolecular Structure & Dynamics, the Biochemistry Program provides state-of-the-art facilities for research in biochemistry, biophysics and structural biology.

Prospective students desiring further information on these degrees should contact the Program Director by visiting the Biochemistry Program web site: http://www.cas.umt.edu/chemistry/biochemistryProgram/.

Minor - Biochemistry

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 29

Required Cumulative GPA: 2.0

Biochemistry

Rule: All courses are required

	Course	Credits

	BCH 110 - Intro Biology for Biochemists Offered spring. Prereq. CHMY 141N or equivalent. Prereq. or Coreq., CHMY 143N. Coreq., BCH 111. An introductory course that explores biomolecules and their roles in life processes. Provides a foundation for Cellular and Molecular Biology (BIOB 260), Genetics and Evolution (BIOB 272), Introductory Biochemistry Seminar (BCH 294), and many other advanced science courses.	3 Credits
	BCH 111 - Intro Biol for Biochemists Lab Offered spring. Prereq., CHMY 141N or equivalent. Prereq., or Coreq., CHMY 143N. Coreq., BCH 110. Introduction to the experimental techniques used to study biomolecules and their roles in life processes. Provides a foundation for other advanced level laboratory courses in chemistry and biochemistry.	1 Credits
Minimum Required Grade: C-		4 Total Credits Required

Chemistry

Rule: All courses are required

	Course	Credits
	CHMY 141N - College Chemistry I Offered autumn and spring. Prereq., ALEKS Placement Level 4 or M 095 Intermediate Algebra w/ C- or better. For science majors and other students intending to take more than one year of chemistry. Properties of elements, inorganic compounds, liquid solutions, chemical equilibria and chemical kinetics. Includes laboratory.	5 Credits
	CHMY 143N - College Chemistry II Offered spring and summer. Prereq., "C-" or better in CHMY 141N or consent of instr. A continuation of CHMY 141N. Includes Laboratory.	5 Credits
	CHMY 221 - Organic Chem I Offered autumn. Prereq., CHMY 123N or 143N. The chemical and physical properties of organic compounds.	3 Credits
	CHMY 223 - Organic Chm II Offered spring. Prereq., CHMY 221. Continuation of 221.	3 Credits
Minimum Required Grade: C-		16 Total Credits Required

Upper Division Biochemistry

Rule: All courses are required

	Course	Credits

	BCH 480 - Advanced Biochemistry I Offered autumn. Prereq., CHMY 223. Primarily for science majors. The chemistry of biomolecules, with emphasis on the structure and function of proteins, carbohydrates, lipids and nucleic acids. The chemistry and regulation of the transfer and expression of genetic information, protein synthesis. Credit not allowed for both BCH 380 and 480-482.	3 Credits
	BCH 482 - Advanced Biochemistry II Offered spring. Prereq., BCH 480 or equiv. Continuation of BCH 480. Enzyme kinetics, metabolism, especially macromolecule biosyntheses and energy acquisition pathways, and the associated energetics and molecular physiology. Credit not allowed for both BCH 380 and BCH 480-482.	3 Credits
	BCH 486 - Biochemistry Research Lab Offered spring. Prereq., BCH 380 or 480. Applications of biochemical principles to modern protein biochemistry. Basic micro- and molecular biology techniques are used to produce mutant proteins; then students learn basic and advanced biophysical techniques to characterize the mutant proteins.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Global Leadership Initiative Certificate

Professional Certificate - Global Leadership

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 12
Required Cumulative GPA: 2.0

Required Courses

Rule: Student must complete the following courses

	Course	**Credits**
	GBLD 110 - Global Chllnges & Leadrshp Prereq., admission to the GLI and consent of GLI Director. Introduction to key global challenges, identifying issues inherent in the challenges, and working with others to research and tackle the challenges.	1 Credits
	GBLD 194 - Seminar (R-6) Presentations by students, faculty, and professionals on issues and topics in their field.	3 Credits
	GBLD 220 - Models of Leadership Prereq., admission to the GLI and consent of GLI Director. Exploration of leadership models, culture influences the effectiveness of those models, and how one's leadership style can best be identified, developed, and put into action.	2 Credits

Minimum Required Grade: C-	6 Total Credits Required

Required Courses

Rule: Student must complete the following courses

Note: Junior year - Students must complete 3 upper-division credits of internship, research, study abroad or service learning connected to their global theme

Senior year - Students must complete 3 credits of GBLD 499 (2 in autumn, 1 in spring)"

	Course	Credits
	GBLD 499 - GLI Capstone Prereq., senior standing and consent of GLI Director; culminating project addressing a global question, to include a written proposal (completed and presented in semester 1) or execution of a project (completed and presented in semester 2).	1 To 6 Credits
Minimum Required Grade: C-		

Global Leadership Initiative

The Franke Global Leadership Initiative is a certificate program that encourages undergraduate students to lead, innovate and think entrepreneurially in order to propose solutions to some of society's greatest challenges. Each year, a cohort of students from disciplines across campus is selected to participate in this 4-year, 12-credit Certificate in Global Leadership.

Students in the Franke Global Leadership Initiative begin by exploring new and enduring global challenges through small, interdisciplinary seminars and through a survey course that delves into specific challenges within a set of five overarching global themes. After gaining an understanding of global challenges, participants experience different styles of leadership and begin to practice and develop leadership styles of their own.

During the final two years of the certificate, the program hones in on a specific theme and challenge chosen by each student. The world becomes the classroom in year three as students undertake experiential learning in both domestic and international settings. By year four, students are ready to bring their individual experiences together through a culminating capstone project with interdisciplinary teams. Each team presents a problem and proposes an innovative solution formed from their out-of-classroom experiences and disciplinary knowledge.

College of Education and Human Sciences

Roberta D. Evans, Dean
Susan Harper-Whalen, Associate Dean

The Phyllis J. Washington College of Education and Human Sciences is comprised of five academic departments– Communicative Sciences and Disorders, Counselor Education, Curriculum and Instruction, Educational Leadership, and Health and Human Performance. It is also the home for the Institute for Educational Research and Service (IERS).

Mission: The College of Education and Human Sciences shapes professional practices that contribute to the development of human potential. We are individuals in a community of lifelong learners, guided by respect for knowledge, human dignity, and ethical behavior. We work together producing and disseminating knowledge to advance the physical, emotional, and intellectual health of a diverse society.

The College of Education and Human Sciences coordinates the University of Montana Professional Education Unit, a unit comprised of initial teacher preparation at the elementary and secondary levels, and the advanced preparation of teachers, certified speech-language pathologists, educational leaders, school counselors, and school psychologists. The Departmetn of Communicative Sciences and Disorders prepares professionals at the master's level in speech-language pathology. The Departments of Curriculum and Instruction, Educational Leadership and Counseling Education prepare professionals for careers in education with bachelor, master's, Education Specialist and Doctor of Education programs while the School Psychology Program, housed in the Psychology Department in the College of Humanities and Sciences, prepares students for careers in education with its master's, education specialist, and doctoral degrees. These programs are organized to foster the development of learning communities and incorporate three basic themes: integration of knowledge and

experience; cooperation among participants; and inclusiveness, caring, and respect for others. The Professional Education Unit at the University of Montana is accredited by the National Council for Accreditation of Teacher Education (NCATE), http://www.ncate.org**.**

The Communicative Sciences and Disorders, Counselor Education, and Health and Human Performance Departments all prepare professionals for careers in human service professions. Via its bachelor's degree in Communicative Disorders, the Communicative Sciences and Disorders Department prepares graduates qualified to work as clinical aides in speech-language pathology or audiology. Through its master's program in Speech-Language Pathology, the department produces professional students qualified to work as speech-language pathologists in schools and clinical settings. Students pursuing the Master of Arts in Counselor Education are prepared to work in a variety of community/agency settings. Upon completion of the program, graduates are prepared to sit for the Licensed Practical Counselor or Licensed Practical Clinical Counselor examination. Via its Bachelor and Master of Science degrees, the Department of Health and Human Performance prepares students in the areas of community health, athletic training, exercise science, and health enhancement. The Athletic Training Program is accredited by the Commission on Accreditation of Athletic Training Education.

Central to its research and outreach efforts with P/K-12 schools, the College of Education and Human Sciences' Institute for Educational Research and Service (IERS) designs, evaluates, and disseminates programs that support the well-being of students and communities. Since 1957, IERS has collaborated with numerous local, state, national, and federal organizations to provide effective, data-driven research models that enhance the social development and academic achievement of all learners. Externally sponsored teaching, research, and service activities are central to IERS. In addition, the College of Education and Human Sciences supports a Preschool Laboratories, Preschool Program, Health and Human Performance Laboratory and Technology Resource Center. These programs offer enhanced opportunities for student involvement and learning.

Specific program options within the College of Education and Human Sciences are described below and in the various departmental sections of this catalog. The web address for the college is http://www.coehs.umt.edu

Communicative Science and Disorders Department

Amy Glaspey, Chair

The Bachelor of Arts Degree in Communicative Sciences and Disorders prepares students for graduate study in speech-language pathology, audiology, various education specialties, business, and health care as well as such fields as developmental and cognitive psychology. The Master of Science degree in Speech Language Pathology provides students with the foundational knowledge and clinical skills in the field of speech language pathology to work in medical and educational settings with clients across the life span.

Department Faculty

Professor

Al Yonovitz, Professor / Audiologist

Associate Professor

Amy Glaspey, Professor
Lucy Hart Paulson, Associate Professor
Julie Wolter, Department Chair and Associate Professor

Assistant Professor

Ginger Collins, Assistant Professor
Catherine Off, Associate Professor
Laurie Slovarp, Ph.D., Assistant Professor

Adjunct

Julie Doerner, CSD Adjunct Instructor; Rural Instit MonTECH Clinical Coord
Nancy Dold, Adjunct Assistant Professor
Megan Eandi, Clinical Educator
Dana Fitz Gale, Adjunct Assistant Professor
Jenna Griffin, Clinical Educator / Adjunct Asst Professor
RoseMary Johnson, Adjunct Assistant Professor
Mary Morrison, CSD Adjunct Instructor; Rural Instit PEPNET Director
Jennifer Schoffer Closson, Clinic Director / Adjunct Assistant Professor

Biology-Human

Back to Top

- BIOH 330 - Anat & Phys Speech Mech
  Credits: 3. Offered autumn. Introduction to anat omy and physiology of the speech and hearing mechanisms including the anatomical orientation and embryological devel opment, the breathing mechanism, structures of phonation, articulators, audition and the nervous system.

Communicative Sci & Disorders

Back to Top

- CSD 110 - The Field of CSD
  Credits: 3. Offered autumn. Introduction to the scientific study of human communi cation and its disorders and to the professions of Speech-Language Pathology and Audiology. Overview of biological systems of speech, language, and hearing and the nature and treatment of communication disorders.
- CSD 131 - American Sign Language I
  Credits: 3. Offered autumn. Introduces the fundamentals of American Sign Language (ASL) used by the Deaf Community, including basic vocabulary, syntax, fingerspelling, and grammatical non-manual signals. Focuses on basic expressive and receptive competence. In addition, the course provides a survey of various issues raised by examining ASL and the Deaf community.
- CSD 132 - American Sign Language II
  Credits: 3. Offered spring. Prereq., CSD 131. ASL II emphasizes further development of receptive and expressive skills; use of signing space; further use of non-manual components of ASL grammar including facial expression and body postures, and introduction to conversational regulators. Discussion of regional and ethnic sign variations, and social, political and educational institutions of the Deaf community. Interaction with members of the Deaf community in both directed and non-directed activities will be featured. Course Attributes:
  Foreign Language Requirement
- CSD 194 - Seminar
  Credits: 1 TO 6. (R-6) Offered intermittently. A review and discussion of current research. Topics vary.
- CSD 210 - Speech & Lang Devel
  Credits: 3. Offered autumn. Sophomore standing or greater. Topics include typical speech and language development, phonology, semantic, morphological, syntax, and pragmatics, along with individual differences, second language acquisition and literacy.

- CSD 221N - Fundamentals of Acoustics

  Credits: 3. Offered spring. Provides students with a basic and working knowledge of acoustics and the physics of sound. Provides the basis for measurement and description of speech stimuli. Direct application to Speech Hearing and Language intervention as well as application into communicative sciences. Course Attributes: Natural Science Course (N)

- CSD 222 - Intro to Audiology

  Credits: 3. Offered autumn. Introduction to prin ciples of acoustics as a basis for understanding hearing assess ment. Development of ability to interpret audiograms as well as the results from a hearing evaluation. Includes pure tone and speech audiometry, acoustic immittance and reflex testing. Hearing screening procedures are also included.

- CSD 320 - Phono Devel & Phonetics

  Credits: 3. Offered autumn. Junior standing or higher. Exploration of the sounds and sound structure of American English and some of its dialects. Introduction to the theory and practice of phonetic and phonological analysis and trained in the transcription of speech into the International Phonetic Alphabet.

- CSD 345 - Developmental Speech & Language Disorders

  Credits: 3. Offered spring. Prereq., CSD 210, CSD 320. Nature of developmental speech and language disorders and basic understanding of principles underlying assessment and treatment of these disorders.

- CSD 365 - Acquired Speech and Language Disorders

  Credits: 3. Offered spring. Prereq., CSD 210. Identification, assessment, and intervention for a variety acquired speech and language disorders. Other topics include secondary conditions, potential psychosocial and educational concerns, multicultural considerations, and family roles.

- CSD 392 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.

- CSD 405 - The Clinical Process

  Credits: 3. Offered spring. Prereq., CSD 210, CSD 222, CSD 320, CSD 345, CSD 365. The underlying principles of clinical methods and practice including: the observation of human behavior and clinical processes, assessment of communication differences, clinical management of these differences, delays and disorders, behavior, interviewing/counseling, lesson planning, and writing skills.

- CSD 411 - Neuroanatomy & Physiology

  Credits: 3. Offered spring. Prereq.,BIOH 330. Focused study on the anatomy of the nervous system and how the nervous system supports behaviors inherent to communication. Students will be introduced to anatomical terms, structures, and functions. Clinical implications will be discussed as well.

- CSD 420 - Speech Science

  Credits: 3. Offered spring. Prereq., CSD 222, CSD 320, BIOH 330. Physiologic, neurologic, and acoustic aspects of human communication, theoretical framework for speech science, and principles of acoustics applied to speech pathology.

- CSD 430 - Senior Capstone

  Credits: 3. Offered autumn. Prereq., senior status. Part one of a two course sequence where the student completes an independent project. Students will prepare a literature review, and ethics application, and a proposal in preparation for a major research project of their design. Course Attributes: Writing Course-Advanced

- CSD 450 - Intro to Aural Rehabilitation

  Credits: 3. Offered spring. Prereq., CSD 210, CSD 222, CSD 345, & CSD 365 or graduate standing. Fundamental skills in speech reading, various types of hearing aids, and the tools necessary to assess and implement auditory training. Management of the client with hearing impairment including psycho-social development and educational intervention. Both children and adults are included.

- CSD 480 - Multicultural Issues

  Credits: 3. Offered autumn. Prereq., CSD 210, CSD 222, CSD 320, CSD 340, CSD 360. Topics include: dynamics of community and culture; strategies to communicate with people from a

variety of backgrounds; learning English as a second language; phonological and linguistic analysis of differences between Standard English speakers and culturally diverse populations and international differences in service delivery.

- CSD 490 - Undergrad Clin Practicum

  Credits: 1 TO 3. 1-3 cr. (per semester). Prereq., lower division CSD courses and consent of CSD Clinical Director. A maximum of 5 credits of clinical practicum may count toward graduation. Allows the advanced student an opportunity to pursue independent or small group clinical practicum. Students will be directly supervised by a certified speech and language pathologist or audiologist. Course Attributes: Internships/Practicums

- CSD 491 - Special Topics

  Credits: 1 TO 3. (R-6) Offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- CSD 496 - Independent Study

  Credits: 1 TO 4. (R-8) Offered intermittently. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.

- CSD 498 - Independent Research

  Credits: 1 TO 3. (R-6) Offered Autumn, Spring. Prereq., consent of the instructor. Participation in independent or instructor associated research activities. Course Attributes: Internships/Practicums

- CSD 520 - Artic & Phono Disorders

  Credits: 3. Offered Autumn. Prereq., Graduate standing and CSD 320, CSD 330, CSD 340 or equivalent course work. Theoretical perspectives on phonological and articulation disorders with emphasis on application to clinical management including evaluation, assessment techniques, and intervention strategies. Level: Graduate

- CSD 530 - Voice & Motor Speech Dis

  Credits: 4. Prereq., Graduate standing, CSD 330, 340, and 411, or equivalent course work. Study of anatomy, physiology, and pathology of voice. Diagnosis and management of voice and resonance disorders. Neural bases of normal and disordered speech motor control. Assessment and treatment of motor speech disorders. Level: Graduate

- CSD 540 - Fluency Disorders

  Credits: 3. Offered Autumn. Prerequisites: Graduate standing and CSD 340 or equivalent course work. Theoretical, etiological, and developmental perspectives of fluency disorders. Principals of assessment and intervention, including integration of fluency shaping and stuttering modification techniques. Level: Graduate

- CSD 545 - Augmentative & Alt. Comm.

  Credits: 3. Offered variable terms. Prereqs., graduate standing. Topics include: AAC terminology, design and use of multiple AAC devices (high and light tech), and implementation of treatment programs for individuals and communication partners. Level: Graduate

- CSD 550 - Lang/Learn Dis.Yng Chld SERV

  Credits: 3. Offered autumn. Prereq., Graduate standing and CSD 210 and CSD 360 or equivalent course work. Theoretical perspectives, research, and clinical issues concerning disorders of language in infants, toddlers and preschoolers considering contributing factors, special populations and basic assessment and intervention principles. Level: Graduate Course Attributes: Service Learning

- CSD 560 - Lang/Learn Dis.Schl Age SERV

  Credits: 3. Offered spring. Prereq., graduate standing and CSD 210 and CSD 360 or equivalent course work. Theoretical perspectives, research, and clinical issues concerning disorders of language, literacy, and learning in the school-age population (elementary through high school) considering contributing factors, special populations and basic assessment and intervention principles. Level: Graduate Course Attributes: Service Learning

- CSD 565 - Aphasia & Acq. Apraxia

  Credits: 3. Offered autumn. Prereq., BIOH 330, CSD 210, and CSD 411 or equivalent course work and graduate standing. Neural bases and medical etiologies of acquired apraxia of speech and acquired cognitive-linguistic disorders in adults. Evaluation and treatment of aphasia and apraxia of speech in persons with acquired neurologic disorders across successive stages of recovery.

Incorporates models of rehabilitation across prevention, assessment, and treatment, with a focus on the WHO ICF and aspects of disability across diverse populations. Level: Graduate

- CSD 566 - Acquired Cog-Com Disorders

  Credits: 3. Offered intermittently. Prereq., Graduate standing, CSD 565 or equivalent course work. Assessment, treatment, and prevention of acquired cognitive-communication disorders including pediatric and adult traumatic brain injury (TBI) and mild traumatic brain injury (MTBI), right hemisphere syndrome (RHS), and dementia. Emphasis on neurobiological principles of rehabilitations, differential diagnosis and theories, and evidence-based research pertaining to clinical management. Level: Graduate

- CSD 570 - Clinical Procedures I

  Credits: 1. Offered autumn, summer; on campus only. Prereq., graduate standing, permission of clinical director. Co-convened with CSD 571. Study of professional and clinical issues with application to clinical practicum. Discussions, demonstrations, and student presentations. Mandatory weekly meeting. Level: Graduate Course Attributes: Co-Convened Course

- CSD 571 - Applied Clinic I

  Credits: 1. Offered autumn, summer; on campus only. Prereq., graduate standing, permission of clinical director. Co-convened with CSD 570. Application of professional skills in the UM RiteCare Clinic. Assignment of cases and area of specialization will vary with the clients needs and availability. Level: Graduate Course Attributes: Co-Convened Course

- CSD 575 - Clinical Procedures II

  Credits: 1. (R-9) Offered autumn, spring, summer. Prereq., CSD 570. Co-convened with CSD 576. Advanced study of professional and clinical issues with application to clinical practicum. Discussions, demonstrations, and student presentations. Mandatory synchronous weekly class meeting. Out of state placement by approval of clinical director. Level: Graduate Course Attributes: Co-Convened Course

- CSD 576 - Applied Clinic II

  Credits: 2. (R-9) Offered autumn, spring, summer. Prereq., CSD 570. Co-convened with CSD 575. Advanced application of professional skills in the UM RiteCare Clinic or off-campus. Assignment of cases and area of specialization will vary with the clients needs and availability. Out of state placement by approval of clinical director. Level: Graduate. Course Attributes: Co-Convened Course

- CSD 580 - Diagnostics

  Credits: 2. Offered every term. Prereq., Graduate Standing and CSD 570. Students will accrue clinical clock hours with pediatric and adult populations while developing the following skills: using case history information to form a diagnostic plan; administering various standardized and non-standardized diagnostic tools; interpreting assessment results; writing diagnostic reports; and sharing diagnostic results with clients, caregivers and other professionals. Mandatory weekly class meetings. Level: Graduate

- CSD 591 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate

- CSD 594 - Graduate Seminar

  Credits: 1 TO 12. (R-3) Offered intermittently. Prereq., consent of instr. A review and discussion of current research. Topics vary. Level: Graduate

- CSD 595 - Special Topics

  Credits: 1 TO 12. Offered intermittently. Prereq., consent of instr. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offering of current topics. Level: Graduate

- CSD 600 - Research Methods

  Credits: 3. Offered spring. Prereq., graduate standing. Research methodologies appropriate for quantitative and qualitative studies in communication sciences and disorders. Focuses on critical reading of research papers, design, and implementation of experiments. Level: Graduate

- CSD 640 - Swallowing Disorders

  Credits: 3. Prereq, Graduate standing and CSD 330, CSD 340, and CSD 411, or equivalent course work. Study of anatomy, physiology, and pathology of swallowing. Diagnosis and treatment of swallowing disorders. Level: Graduate

- CSD 675 - Clinical Externship
  Credits: 6. Offered every term. Prereq., permissions of Clinic Director and completion of at least 4 credits of CSD 575 clinical course work. The course is an externship typically completed during a student's final semester of graduate school. The externship requires a commitment of 30-40 hours a week in a school, clinic, or medical site across Montana or out of state that is approved by The University of Montana. Online case study is also required to fulfill requirements. Level: Graduate
- CSD 688 - CSD Master of Science Capstone
  Credits: 3. Offered spring and autumn. Prereq., CSD 600, Graduate standing and consent of instructor. In depth literature review of a particular field of study related to speech-language pathology. Level: Graduate
- CSD 696 - Independent Study
  Credits: 1 TO 5. Prereq. Consent of instr. Course material appropriate to the needs and objectives of the individual student. Level: Graduate
- CSD 699 - Thesis
  Credits: 1 TO 6. (R-9) Offered autumn, spring, summer. Prereq., CSD 600, Graduate standing and consent of instructor. The primary purpose of the thesis is to allow a student to conduct a research project in a particular field of study related to speech and language pathology. Level: Graduate

Communicative Sciences and Disorders B.A.

Bachelor of Arts - Commun Sci & Disorders

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 67
Required Cumulative GPA: 2.0

Lower Core Courses

Rule: All courses listed are required

	Course	Credits
	CSD 110 - The Field of CSD Offered autumn. Introduction to the scientific study of human communi cation and its disorders and to the professions of Speech-Language Pathology and Audiology. Overview of biological systems of speech, language, and hearing and the nature and treatment of communication disorders.	3 Credits
	CSD 210 - Speech & Lang Devel Offered autumn. Sophomore standing or greater. Topics include typical speech and language development, phonology, semantic, morphological, syntax, and pragmatics, along with individual differences, second language acquisition and literacy.	3 Credits

	CSD 221N - Fundamentals of Acoustics Offered spring. Provides students with a basic and working knowledge of acoustics and the physics of sound. Provides the basis for measurement and description of speech stimuli. Direct application to Speech Hearing and Language intervention as well as application into communicative sciences.	3 Credits
	CSD 222 - Intro to Audiology Offered autumn. Introduction to prin ciples of acoustics as a basis for understanding hearing assess ment. Development of ability to interpret audiograms as well as the results from a hearing evaluation. Includes pure tone and speech audiometry, acoustic immittance and reflex test ing. Hearing screening procedures are also included.	3 Credits
	LING 270S - Intro to Ling Offered autumn and spring. An introduction to the field of modern linguistics and to the nature of language. Emphasis on the ways different cultures develop symbol systems for representing meaning.	3 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	PSYX 120 - Research Methods I Offered every term. Prereq., PSYX 100S. Experimental and other quantitative methods employed in the scientific study of behavior.	3 Credits

	CSD 320 - Phono Devel & Phonetics Offered autumn. Junior standing or higher. Exploration of the sounds and sound structure of American English and some of its dialects. Introduction to the theory and practice of phonetic and phonological analysis and trained in the transcription of speech into the International Phonetic Alphabet.	3 Credits
	CSD 345 - Dev. Speech & Lng Dis Offered spring. Prereq., CSD 210, CSD 320. Nature of developmental speech and language disorders and basic understanding of principles underlying assessment and treatment of these disorders.	3 Credits

	CSD 405 - The Clinical Process Offered spring. Prereq., CSD 210, CSD 222, CSD 320, CSD 345, CSD 365. The underlying principles of clinical methods and practice including: the observation of human behavior and clinical processes, assessment of communication differences, clinical management of these differences, delays and disorders, behavior, interviewing/counseling, lesson planning, and writing skills.	3 Credits
	CSD 411 - Neuroanatomy & Physiology Offered spring. Prereq.,BIOH 330. Focused study on the anatomy of the nervous system and how the nervous system supports behaviors inherent to communication. Students will be introduced to anatomical terms, structures, and functions. Clinical implications will be discussed as well.	3 Credits
	CSD 420 - Speech Science Offered spring. Prereq., CSD 222, CSD 320, BIOH 330. Physiologic, neurologic, and acoustic aspects of human communication, theoretical framework for speech science, and principles of acoustics applied to speech pathology.	3 Credits
	CSD 430 - Senior Capstone Offered autumn. Prereq., senior status. Part one of a two course sequence where the student completes an independent project. Students will prepare a literature review, and ethics application, and a proposal in preparation for a major research project of their design.	3 Credits
	CSD 450 - Intro to Aural Rehabilitation Offered spring. Prereq., CSD 210, CSD 222, CSD 345, & CSD 365 or graduate standing. Fundamental skills in speech reading, various types of hearing aids, and the tools necessary to assess and implement auditory training. Management of the client with hearing impairment including psycho-social development and educational intervention. Both children and adults are included.	3 Credits
Minimum Required Grade: C-		27 Total Credits Required

Degree Electives

Rule: Must complete the following subcategories

18 Total Credits Required

Biological Science Requirement

Rule: Choose 1 of the listed courses

	Course	**Credits**
	BIOB 101N - Discover Biology Offered every term. Contemporary exploration of the organization and complexity of living organisms and the systems in which they live. The central question of biology--relationship between form and function, acquisition and use of energy, and continuity between generations will be addressed through lectures and laboratory investigations. Credit not allowed toward a major in biology. Credit not allowed for both BIOB 101N and BIOB 160N.	3 Credits

	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
Minimum Required Grade: C-		3 Total Credits Required

Physical Science Requirement

Rule: 1 chemistry or physics course, which must be at the 100-level or above and a minimum of 3 credits

Note: Student may take another approved physical science course.

Statistics Requirement

Rule: Choose 1 of the listed courses

	Course	**Credits**
	PSYX 222 - Psychological Statistics Offered every term. Prereq., PSYX 120; M 115, M 162 or 171. Application of statistical techniques to psychological data. Credit not allowed for both PSYX 222 and SOCI 202.	3 Credits
	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3 Total Credits Required

Psychology Requirement

Rule: Choose 1 of the listed courses

	Course	Credits
	PSYX 230 - Developmental Psychology Offered autumn, spring, summer. Prereq., PSYX 100S. The study of human physical, cognitive and psychosocial development throughout the life span. Content covers major theories, the influence of genetics, and the environment from a chronological aspect. Appropriate for Social Work, Nursing, Addiction Studies, Education, and Psychology.	3 Credits
	PSYX 233 - Fund of Psychology of Aging Offered every term. An overview of theories and research findings in the psychology of adulthood and aging.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Modern and Classical Language Requirement

Rule: Choose a sequence of 2 semesters

Note: Student must take a sequence (2 semesters) of a modern or classical language.

Suggested Course of Study

First Year	**A**	**S**
CSD 110 The Field of CSD	3	-
PSYX 100S (PSYC100S) Introduction to Psychology	-	4
M 115 (MATH 117) Probability and Linear Math	-	3
WRIT 101 (ENEX 101) College Writing I	3	-

Communicative Sciences and Disorders Certificate

Minor - Commun Sci & Disorders

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 18
Required Cumulative GPA: 2.0

Core Courses

Rule: Students must complete the following courses

	Course	Credits
	CSD 110 - The Field of CSD Offered autumn. Introduction to the scientific study of human communi cation and its disorders and to the professions of Speech-Language Pathology and Audiology. Overview of biological systems of speech, language, and hearing and the nature and treatment of communication disorders.	3 Credits
	CSD 210 - Speech & Lang Devel Offered autumn. Sophomore standing or greater. Topics include typical speech and language development, phonology, semantic, morphological, syntax, and pragmatics, along with individual differences, second language acquisition and literacy.	3 Credits
	CSD 222 - Intro to Audiology Offered autumn. Introduction to prin ciples of acoustics as a basis for understanding hearing assess ment. Development of ability to interpret audiograms as well as the results from a hearing evaluation. Includes pure tone and speech audiometry, acoustic immittance and reflex test ing. Hearing screening procedures are also included.	3 Credits
	LING 270S - Intro to Ling Offered autumn and spring. An introduction to the field of modern linguistics and to the nature of language. Emphasis on the ways different cultures develop symbol systems for representing meaning.	3 Credits
Minimum Required Grade: C-		12 Total Credits Required

Minor electives

Rule: Choose at least 6 upper division credits from the list

	Course	Credits
	CSD 320 - Phono Devel & Phonetics Offered autumn. Junior standing or higher. Exploration of the sounds and sound structure of American English and some of its dialects. Introduction to the theory and practice of phonetic and phonological analysis and trained in the transcription of speech into the International Phonetic Alphabet.	3 Credits
	CSD 345 - Dev. Speech & Lng Dis Offered spring. Prereq., CSD 210, CSD 320. Nature of developmental speech and language disorders and basic understanding of principles underlying assessment and treatment of these disorders.	3 Credits
	CSD 365 - Acq. Speech & Lang Dis. Offered spring. Prereq., CSD 210. Identification, assessment, and intervention for a variety acquired speech and language disorders. Other topics include secondary conditions, potential psychosocial and educational concerns, multicultural considerations, and family roles.	3 Credits

	CSD 491 - Special Topics (R-6) Offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.	1 To 3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Teaching and Learning Department

Adrea Lawrence, Chair

The Department of Teaching and Learning offers the Bachelor of Arts degree in elementary education and teaching licensure in elementary education. The department also offers teaching licensure at both the secondary and K-12 levels for students who are earning or have already completed the baccalaureate degree (teaching major or teaching minor) in one of the following state-approved content areas: Art, Biology, Business Education, Chemistry, Earth Science, Economics, English, English as a Second Language, French, General Science Broadfield, Geography, German, Government, Health and Human Performance, History, Latin, Library Media, Mathematics, Music, Physics, Psychology, Reading, Russian, Social Studies Broadfield, Sociology, Spanish, Special Education, and Theatre. (See specific requirements for each in the following pages.) At the graduate level, the department offers master and doctoral degrees in Curriculum and Instruction. Programs across all degree levels are organized to foster the development of learning communities and incorporate three essential themes: integration of ideas; cooperative endeavors; and respect for diversity and individual worth. For more information go to the Department of Teaching and Learning web site.

Graduate Programs

The department offers the Master of Education (M.Ed.) in curriculum and instruction. Students select from one of the following options: curriculum studies, early childhood education, library media services, literacy education, and special education. Students may earn the master's degree in combination with requirements for initial teacher licensure at the elementary and secondary and K-12 levels. This option is further explained below. The department also offers the Doctor of Education (Ed.D.) in curriculum and instruction. Information about these graduate programs is available from the department office and website, UM Graduate Programs and Admissions Catalog.

Teacher Preparation

Elementary Education

Individuals preparing to teach in elementary schools (license for grades K-8) complete a major in elementary education. Students apply for admission to the Teacher Education Programs, usually at the end of the sophomore year, in order to continue with the education (EDU) sequence of courses. All elementary education majors are advised by full-time advisors within the Department of Curriculum and Instruction.

Secondary and K-12 licensure

Students preparing to teach at the middle or high school levels (license for grades 5-12) or in K-12 licensure areas will declare a major in the subject area(s) they wish to teach, e.g., English, mathematics, music, or any other of the state-approved major content endorsement areas listed previously. They are advised within their major department(s) and, upon admission to the Teacher Education Program, they also are advised within the Department of Curriculum and Instruction regarding the requirements necessary to earn secondary or K-12 licensure. All secondary and K-12 licensure students seek admission to the Teacher Education Program, usually at the end of the sophomore year, and complete course work required for licensure in Curriculum and Instruction and in their major content area(s).

Applicants for Montana teaching licensure must: (1) satisfy all degree and licensure requirements as outlined below; and (2) be at least 18 years of age. Information about the Teacher Education Program is available in the department office and website.

Master's Degree and Initial Licensure

Individuals who have completed a bachelor's degree may elect to apply to the department's Graduate Program and combine the master's degree in curriculum and instruction (curriculum studies option) with licensure to teach. At the secondary and K-12 licensure level, the combined program may be completed in a summer-autumn-spring-summer sequence provided the student previously has completed most of the required content courses. At the elementary licensure level, the program typically takes two academic years.

Assessment at Admission to the Undergraduate Teacher Education Program

Individuals seeking licensure to teach must apply for admission to the professional Teacher Education Program. Admission is limited to approximately 125 elementary and 125 secondary candidates per year. Deadlines for application are September 15 and February 15. Individuals are eligible for consideration for admission if they have:

- been admitted to the University of Montana;
- completed at least 30 semester credits;
- earned a minimum cumulative GPA (including all transfer credits) of 2.75;
- completed an English writing course (WRIT 101) with a grade of C- or better;
- demonstrated evidence of writing ability in an application essay;
- documented appropriate experience working with children or youth;
- secured supportive recommendations from two faculty members;
- presented results of a national fingerprint-based background check; and
- demonstrated appropriate professional behaviors and dispositions associated with success in the profession.

The Teacher Education Program Admission Application packet includes a policy and procedures handbook and can be downloaded from the website.

Once admitted, licensure candidates must maintain a minimum GPA of 2.75 each semester to continue in the program. Candidates who interrupt their studies for more than two years are placed on inactive status and must apply for readmission to both the University and the Teacher Education Program.

Candidates seeking a K-12 endorsement in library, reading, or special education must have full admission to the Teacher Education Program or be a licensed teacher before applying to one of these specialized programs.

Degree-holding individuals are invited to submit transcripts for review to determine how previous course work applies. They may earn a second baccalaureate degree and/or a teaching license or they may combine elementary, secondary, or K-12 licensure with a master's degree. They should enroll with the Admissions Office as “post-baccalaureate” unless pursuing a graduate degree.

Admission Policy for Minority Students and Students with Disabilities

The Teacher Education Program is committed to providing opportunities for teacher preparation for members of groups that have been historically disadvantaged and subject to discrimination. The criteria for admission are the same for students with disabilities and for members of racial, ethnic and other minorities, as for other students; however, students who do not meet one or more of the criteria for admission are encouraged to describe in their applications any special circumstances, experiences, skills and/or special talents that may compensate for unmet criteria. The physical, social, economic, and cultural circumstances that may have influenced a student’s ability to achieve minimum eligibility for admission will be considered. A special effort will be made to determine the student's abilities and potential to overcome disadvantage or discrimination and become a successful beginning teacher. Upon entry to the program, the candidate will be assigned to a faculty mentor. The candidate and mentor will design a course of study appropriate for the candidate’s progression toward the degree and/or licensure.

Assessment at Application for Student Teaching

Candidates begin planning for student teaching two semesters prior to placement. Candidates are eligible to student teach if they have:

- full admission into the Teacher Education Program;
- a grade of C- or better in all required licensure courses;
- a minimum cumulative GPA of 2.75 (and 2.75 in each field of licensure);
- results of a current national fingerprint-based background check (candidates with misdemeanors or felonies may be subject to further review by the Field Experience Committee);
- a completed application to student teach and the consent of the Director of Field Experiences;
- for elementary education majors, student should be enrolled in Level of the Program, and have completed all coursework in all previous levels.
- for secondary licensure candidates, all methods courses, two thirds of content course work, and approval by departments in the major/minor content area.

Consult the Teacher Education Policy Handbook for application deadlines and procedures. The Student Teaching Application is available on the Field Experiences website.

Internships and practica in library, reading, and special education do not substitute for the student teaching semester required for licensure in a subject field.

Assessment at Program Completion:

As active participants in this learning community, candidates are expected to assume roles as both learners and teachers in course work and clinical performance. Through personal disposition, classroom performance, and professional action, candidates who complete the Teacher Education Program at the University of Montana will be able to:

- demonstrate knowledge of the disciplines and subject matter related to curriculum;
- design interdisciplinary and discrete subject area instruction to achieve curriculum goals;
- use appropriate technologies and resources to enhance instruction and student performance;
- select and design appropriate, authentic means of assessing student learning and progress;
- implement instructional and behavioral management strategies to promote a safe and positive learning environment;
- engage students in learning activities that promote critical and creative thinking;
- design and organize learning environments to accommodate learners;
- communicate clearly, accurately and professionally with students and their families, colleagues, and community members;
- reflect on professional practices and demonstrate commitment to fairness and the ability of all to learn.

Indian Education for All

It is Montana's constitutional intent that the state's education system will recognize the distinct and unique cultural heritage of American Indians and will be committed in its education goals to the preservation of their cultural heritage. The intent of the legislature as expressed in MCA20-1-501, Indian Education for All, is that every Montanan, whether Indian or non-Indian, be encouraged to learn about the distinct and unique heritage of American Indians in a culturally responsive manner. It is also intended that educational personnel provide means by which school personnel will gain an understanding for the American Indian people.

Candidates preparing for teaching licensure in all endorsement areas are required to complete a minimum of one course in Native American Studies. Candidates also may choose ANTY 323X (ANTH 323X), Indians of Montana, to meet this requirement. Throughout their programs of study candidates must demonstrate a) ability to integrate into their content areas knowledge of the history, cultural heritage, and contemporary status of American Indians and tribes in Montana; b) knowledge of how students within different populations, including Montana American Indians, differ in their approaches to learning; and c) ability to create instructional opportunities that are adapted to diverse learners, including situations where concentrated generational poverty has affected student academic achievement.

Bachelor of Arts - Elementary Education

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 116

Required Cumulative GPA: 2.75

Note: Admission to the Teacher Education Program is required to enroll in any EDU courses.

Language Arts Content Courses

Rule: All courses are required.

Minimum Required Grade: C-

9 Total Credits Required

Literature

Rule: Complete one of the following.

Note: Other literature courses may meet this requirement. Please consult with the Education Advisor for approval.

	Course	Credits
	LIT 110L - Intro to Lit Offered every term. Study of how readers make meaning of texts and how texts influence readers. Emphasis on interpreting literary texts: close reading, critical analysis and effective writing.	3 Credits
	LSH 151L - IntrHumanities:Greek,Bible,Rom Offered autumn. Prereq., eligibility for WRIT 101 (ENEX 101) based on writing placement examination. General survey of the field of Humanities in Western civilization, comparing and contrasting the Greco–Roman with the Jewish and Christian traditions.	0 To 4 Credits
	LSH 152L - Humanities Medieval to Modern Offered spring. Prereq., eligibility for WRIT 101 (ENEX 101) based on writing placement examination. General survey of the field of Humanities in Western civilization, in the modern period.	0 To 4 Credits
Minimum Required Grade: C-		3 Total Credits Required

College Writing

Rule: Complete the following course.

Note: null

	Course	Credits

	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Children's Literature

Rule: Complete the following course.

	Course	Credits
	EDU 331 - Lit & Literacy for Children Offered autumn and spring. Prereq., WRIT 101; open to majors in elementary education, secondary education or pre-education. Genre survey, including cross-cultural literature, that focuses on responding to children's literature through reading, writing, listening, speaking, and activities that emphasize selecting literature, teaching critical thinking, and integrating literature into the elementary curriculum.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Science Content Courses

Rule: Complete all of the following.

Note: Other science courses may meet the requirements. Please consult with the Education Advisor.

	Course	Credits
	BIOB 226N - Gen Science: Earth & Life Sci Offered spring. Prereq., PHSX 225N and M 132 or M 135 or equiv. Integrated lectures, laboratory exercises, and field trips on topics in earth and biological science for prospective elementary school teachers and the non-scientist. A two-hour laboratory session is required each week and one or two Saturday field trips.	5 Credits

	PHSX 225N - Gen Science: Phys & Chem Sci Offered autumn. Prereq., M 095 or equiv. Integrated lectures, discussions, laboratory exercises, and demonstrations on topics in chemical and physical science for prospective elementary school teachers and the non-scientist. A two-hour laboratory session is required each week.	5 Credits
Minimum Required Grade: C-		10 Total Credits Required

Social Studies Content Courses

Rule: Complete all of the following.
Note: null
Minimum Required Grade: C-
16 Total Credits Required

Geography

Rule: Complete one of the following.

	Course	Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
	GPHY 141S - Geography of World Regions Offered autumn and/or spring. An overall view of how the lands and peoples of the world are organized into coherent geographical regions, how landscapes differ from region to region, and how the people differ in terms of their traits, beliefs, ways of life, and economic livelihood.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

American History

Rule: Complete one of the following.
Note: Other history courses may fulfill this requirement. Please consult with the Education Advisor.

	Course	Credits
	HSTA 101H - American History I (AM) Offered autumn. A comprehensive introductory history of Colonial, Revolutionary and 19th century America, to 1877. Lecture-discussion. Credit not allowed for both 101H and 103H.	4 Credits
	HSTA 102H - American History II (AM) Offered spring. A comprehensive introductory history of the U.S. since 1877. Lecture-discussion. Credit not allowed for both HSTA 102H and 104H.	4 Credits

Minimum Required Grade: C-	4 Total Credits Required

Other Social Studies Courses

Rule: Complete all of the following courses.

Note: Other Native American Studies courses may fulfill the NASX 105H requirement. Please consult with the Education Advisor.

	Course	Credits
	HSTA 255 - Montana History (AM) Offered autumn. An introductory and interpretive history from Lewis and Clark to 2000.	3 Credits
	NASX 105H - Intro Native Amer Studies Offered Autumn and Spring. Survey course to acquaint the student with Native American Studies by a general overview of Indian history, culture, philosophy, religious beliefs and contemporary issues.	3 Credits
	PSCI 210S - Intro to American Government Offered every term. Not open to senior level political science majors except with consent of instructor. Constitutional principles, structures, and the political processes of the national government.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Health and Physical Education

Rule: Complete all of the following.

	Course	Credits
	HEE 233 - Health Issues Child/Adol Offered every term. Overview of current health issues affecting children and adolescents. Focus is on educational and preventive measures that can be implemented by teachers and schools through comprehensive school health education programs.	3 Credits
	HEE 302 - Meth of Inst Strat in Elem PE Offered every term. Prereq. admission into Teacher Education Program in the College of Education and HEE 233. Application of educational theory in planning, analyzing, and presenting learning experiences to typical and atypical populations in elementary school physical education for children in grades K-6. Active participation required.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

The Arts

Rule: Complete all of the following.

	Course	Credits
	ARTZ 302A - Elementary School Art Offered autumn and spring. Visual art teaching methods for future elementary school teachers in a variety of media, methods of critique, and curricular components.	2 Credits
	MUSE 397 - Methods: K-8 Music Offered autumn and spring. Prereq., C&I 200. Integration of fundamental skills and basic rudiments of music into the various aspects of teaching music creatively in the elementary school. For non-music majors only.	2 Credits
	THTR 239 - Creative Drama/Dance: K-8 Offered autumn and spring. Focus on the use of creative drama and dance as types of educational tools. Students will explore, experience, and implement creative teaching methods in order to promote scholarship through kinesthetic teaching in elementary education.	2 Credits
Minimum Required Grade: C-		6 Total Credits Required

Teacher Education Program Professional Licensure Courses

Rule: All courses are required.
Minimum Required Grade: C-
60 Total Credits Required

Level 1

Rule: All courses must be completed concurrently.

Note: Students are required to complete EDU 397 Methods: Early Numeracy K-4 (3 credits) and EDU 397 Methods: PK-3 Early Reading (3 credits).

	Course	Credits
	EDU 222 - Educational Psych Child Dev Offered autumn and spring. Prereq., Admission to the Teacher Education Program in elementary or early childhood: P-3. This course must be taken concurrently with Level 1 courses. This course will examine the classroom practices that impact elementary aged children's learning, motivation and development. The content is closely aligned with co-requisite courses and initial field experience, allowing opportunities for observation and practice of principles covered in class.	3 Credits
	EDU 338 - Academic Interventions Offered autumn and spring. Prereq., Admission to the Teacher Education Program in elementary or early chiildhood:P-3. This course must be taken concurrently with Level 1 courses. This course prepares pre-service teachers to work with all students including those who are struggling learners and high achievers. The course is focused on school-wide assessment and instruction methods with particular focus on working with individual children and small groups in core academic areas.	3 Credits

	EDU 339 - Tchg Assess PK-8 Lang Arts Offered autumn and spring. Prereq., admission to the Teacher Education Program in elementary education. This class must be taken concurrently with Level 2 courses. Language development and primary and secondary language acquisition, theory and application of teaching and assessing listening, speaking, writing, and viewing in a PK-8 setting.	3 Credits
	EDU 395 - Clinical Experience (R-4) Offered autumn and spring. Prereq., admission to the Teacher Education Program. Arranged field experience and seminar focusing on applying content from the co-requisite courses. This course number is used for multiple clinical experiences. Check the class schedule or with your advisor regarding the appropriate section. Elementary Education Majors: EDU 395 Clinical Experience Level 1 must be taken concurrently with Level 1 courses. EDU 395 Clinical Experience Level 2 must be taken concurrently with Level 2 courses. Secondary and K-12 Licensure Students: EDU 395 Clinical Experience K-8 and EDU 395 Clinical Experience 9-12 have a prerequisite of an initial field experience and should be taken concurrently with a secondary or K-12 methods course.	1 Credits
Minimum Required Grade: C-		10 Total Credits Required

Level 2

Rule: All courses must be completed concurrently.

Note: Students are required to complete EDU 397 Methods: PK-8 Language Arts (3 credits).

	Course	**Credits**
	EDU 346 - Exceptionalities Offered autumn and spring. Prereq., Admission to the Teacher Education Program in elementary or early childhood: P-3. This course must be taken concurrently with Level 2 courses and is restricted to students who have completed coursework in Level 1. This course will focus on characteristics and strategies for optimizing learning for children with exceptionalities in the regular education classroom. Addresses the Individuals with Disabilities Education Act and subsequent reauthorizations, presents practices for working with students who are at-risk and students with disabilities in inclusive settings, and includes technological considerations.	3 Credits
	EDU 370 - IntegTech into Educ Offered autumn and spring. Prereq., Admission to the Teacher Education Program and general computer literacy skills. Integration and use of computer and other technologies in education.	3 Credits

	EDU 395 - Clinical Experience (R-4) Offered autumn and spring. Prereq., admission to the Teacher Education Program. Arranged field experience and seminar focusing on applying content from the co-requisite courses. This course number is used for multiple clinical experiences. Check the class schedule or with your advisor regarding the appropriate section. Elementary Education Majors: EDU 395 Clinical Experience Level 1 must be taken concurrently with Level 1 courses. EDU 395 Clinical Experience Level 2 must be taken concurrently with Level 2 courses. Secondary and K-12 Licensure Students: EDU 395 Clinical Experience K-8 and EDU 395 Clinical Experience 9-12 have a prerequisite of an initial field experience and should be taken concurrently with a secondary or K-12 methods course.	1 Credits
	EDU 397 - Methods: Teaching & Assessing (R-15) Offered autumn and spring. Prereq., admission to the Teacher Education Program in elementary or early childhood: P-3. This course number is used for multiple methods courses. Check the class schedule or with your advisor regarding appropriate sections. PK-4 Early Numeracy: Offered autumn and spring. This class must be taken concurrently with Level 1 courses and is restricted to students who have been admitted to the Elementary Education program. Students will learn mathematics concepts, methods of instruction, and the use of instructional materials appropriate for grades K-4 including the use of state and national standards for mathematics, appropriate technology, and manipulatives. Additionally, students will learn techniques for assessing the effectiveness of the counting and cardinality, operations and algebraic thinking, numbers and operations, measurement and data, and geometry. PK-3 Early Literacy: Offered autumn and spring. This class must be taken concurrently with Level 1 courses and is restricted to students who have been admitted to the Elementary Education program. The purpose of this course is to develop an understanding of emergent literacy and beginning reading and to examine developmentally appropriate methods of teaching and assessing reading to children in grades K-3.	3 Credits
	EDU 407E - Ethics & Policy Issues Offered every term. Prereq., admission to Teacher Education Program and EDU 202 or EDU 395. Practical application of ethical principles of the teaching profession. Analysis of the American public school and major policy issues from historical, legal, political, social as well as ethical perspectives.	3 Credits
	ENST 472 - Gen Sci: Conserv Ed Offered autumn and spring. A study of the foundations of environmental science and conservation education with applications to community service and teaching.	3 Credits
Minimum Required Grade: C-		16 Total Credits Required

Level 3

Rule: All courses must be completed concurrently.

Note: Students must complete EDU 495 Clinical Experience: Level 3 (1 credit).
Students must complete four EDU 497 methods courses, including 5-8 Mathematics (3 credits), K-8 Social Studies (3 credits), K-8 Science (3 credits), 4-8 Reading (3 credits).

	Course	Credits
	EDU 340 - Classroom Management Offered autumn and spring. Prereq., Admission to the Teacher Education Programin elementary edcuation. This course must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Level 1 and 2. This course is designed to prepare pre-service teachers to set up a classroom, establish classroom policies and procedures and routines, establish and maintain cooperative relationships with parents, effectively provide feedback to students, motivate desired student behavior, and research professional literature to seek best classroom management practices to hone the craft of effective instruction.	3 Credits

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits

Minimum Required Grade: C-	16 Total Credits Required

Level 4

Rule: All courses must be completed concurrently.

Note: EDU 494 is completed for 1 credit and EDU 495 is completed for 14 credits.

	Course	Credits
	EDU 494 - Seminar:Refl Pract & App Rsrch (R-9) Required seminar during student teaching. Prereq., admission to the Teacher Education Program. Focuses on learning to conduct research on P-12 student performance to determine teaching effectiveness. Includes on-campus and/or on-line planning, conducting, and analyzing classroom practice.	1 To 9 Credits
	EDU 495 - Student Teaching (R-14) Offered autumn and spring. Arranged capstone clinical experience required for all professional licensure students. Prereq., admission to the Teacher Education Program, completion of all required field experiences and methods courses, an application to student teach, and the consent of the Director of Field Experiences. In addition, elementary education majors must complete all coursework in all previous levels. Secondary and K-12 licensure students must complete at least two-thirds of content coursework and receive approval by departments in their major and minor content areas.	1 To 14 Credits
Minimum Required Grade: C-		15 Total Credits Required

Administrative Systems Management Minor

Minor - Administrative System Mgmt (Minor)

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 27

Required Cumulative GPA: 2.0

Note: This is a non-teaching minor offered with the Department of Curriculum & Instruction in the College of Education and Human Sciences. Admission to the Teacher Education Program is NOT required.

Administrative Systems Management Minor Required Courses

Rule: Complete all of the following courses.

	Course	Credits

	ACTG 201 - Principles of Fin Acct Offered every term. Prereq. or Coreq. M 115, M 121, M 151 or M 162. Introduction to financial accounting concepts, including transactions analysis, financial statement analysis, and corporate financial reporting practices.	3 Credits
	BGEN 235 - Business Law Offered autumn and spring. This course provides an overview of law as it applies to business transactions. Topics include the nature and source of law; courts and procedure; contracts, sales, and employment; commercial paper; bailment's; property; business organizations; insurance; wills and estate planning; consumer and creditor protection; torts; criminal law; and agency law. Credit not allowed for both BGEN 235 and BADM 257.	3 Credits
	BMGT 340 - Mgmt & Organization Behavior Offered autumn and spring. Prereq., junior standing in Business. An intensive examination of the fundamentals of management and organization supported by the application of behavioral science principles to the management of people in organizations.	3 Credits
	C&I 287 - Business Communications Offered autumn and spring. Prereq., WRIT 101 College Writing I. Emphasis on consistent and logical approaches to solving communication problems and creating successful communication products.	3 Credits
	C&I 341 - Information Managemnt & Design Offered spring. Prereq., CSCI 172. Emphasis on the development and maintenance of a file management system, application of effective design concepts in the creation of professional print and digital images and documents, and the creation of digital videos for use in education and/or business.	3 Credits
	CSCI 172 - Intro to Computer Modeling Offered autumn and spring. Problem solving and data modeling using computer productivity software. Emphasis using spreadsheets and database for data analysis. Credit not allowed for CSCI 172, CRT 172, and CS 172.	3 Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	EDU 472 - Dev Digital Rich Workplace Offered spring. Prereq., CSCI 172. Project-based course to gain understanding and the ability to use web development tools to create a functional, well-designed web project. Additional topics/projects include: Web 2.0+ tapping the potential of digital tool; social media—educational and business uses; gamification in education and business, and introductory electronic game development for the classroom and the boardroom.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits

Minimum Required Grade: C-	27 Total Credits Required

Teaching Library Media Licensure

Teaching Licensure - Education; Track: Teacher Librarian Endorsement

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 27

Required Cumulative GPA: 2.75

Note: This program of study can only be completed as a teaching minor for those pursuing a teaching major in another content area or by currently licensed teachers. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. This program is offered jointly online with UM-Missoula and UM-Western. Some courses will be taken through UM-Western.

Library Media Minor Courses

Rule: Complete all of the following courses.

Note: Students will also complete LIBM 461 Information Literacy (3 credits) through UM-Western. Students may choose to substitute EDU 391 Children's and Young Adult Literature (4 credits) online through UM-Western in place of EDU 331 and EDU 432.

	Course	Credits
	EDU 331 - Lit & Literacy for Children Offered autumn and spring. Prereq., WRIT 101; open to majors in elementary education, secondary education or pre-education. Genre survey, including cross-cultural literature, that focuses on responding to children's literature through reading, writing, listening, speaking, and activities that emphasize selecting literature, teaching critical thinking, and integrating literature into the elementary curriculum.	3 Credits
	EDU 432 - Lit & Literacy for Yng Adlts Offered spring. Genre surveys; extensive reading, and analyzing of literature, authors and media addressed to students ages 12-18. Emphasizes effective teaching strategies for using high quality literature with middle school and secondary students. Not a substitute for EDU 331.	3 Credits
	EDU 488 - Libraries and Technology Offered spring. Coreq., C&I 483. Uses of digital technologies in all aspects of library media center operations, including cataloging and circulation, collection development, reference services and administration.	3 Credits
	LIBM 464 - Reference Resources Offered intermittently. Evaluation, selection, and use of basic reference resources. Teaching of media skills, information negotiation, search strategies, database use, and information services.	3 Credits

	LIBM 468 - Admin & Assess of Lib Programs Administrating and managing the school library space, materials, budget, and programs. Assessing the library program in terms of effectiveness, instructional collaboration, and district support, using state, regional and national guidelines for library programs and services.	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Library Media Practicum

Rule: Complete the following course.

Note: All library media coursework must be completed prior to enrolling in the library media practicum.

	Course	Credits
	LIBM 495 - Practicum Offered spring and summer. Prerequisite: 16 credits in library and consent of instructor. Supervised field experience in selected phases of library operations, including assessment.	2 Credits
Minimum Required Grade: C-		2 Total Credits Required

To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a major/minor form for graduation or the major/minor/concentration section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Teaching Reading Licensure

Teaching Licensure - Education; Track: Teaching Reading

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 27

Required Cumulative GPA: 2.75

Note: This program of study can only be completed as a teaching minor for those pursuing a teaching major in another content area or by currently licensed teachers. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information.

Reading Teaching Minor Courses

Rule: Complete all of the following courses.

Note: The EDU 397 course number is used for multiple courses. Students should register for EDU 397 Teaching and Assessing PK-8 Language Arts. The EDU 497 course number is used for multiple courses. Students should register for EDU 497 Teaching and Assessing K-8 Reading.

	Course	Credits

	EDU 331 - Lit & Literacy for Children Offered autumn and spring. Prereq., WRIT 101; open to majors in elementary education, secondary education or pre-education. Genre survey, including cross-cultural literature, that focuses on responding to children's literature through reading, writing, listening, speaking, and activities that emphasize selecting literature, teaching critical thinking, and integrating literature into the elementary curriculum.	3 Credits
	EDU 397 - Methods: Teaching & Assessing (R-15) Offered autumn and spring. Prereq., admission to the Teacher Education Program in elementary or early childhood: P-3. This course number is used for multiple methods courses. Check the class schedule or with your advisor regarding appropriate sections. PK-4 Early Numeracy: Offered autumn and spring. This class must be taken concurrently with Level 1 courses and is restricted to students who have been admitted to the Elementary Education program. Students will learn mathematics concepts, methods of instruction, and the use of instructional materials appropriate for grades K-4 including the use of state and national standards for mathematics, appropriate technology, and manipulatives. Additionally, students will learn techniques for assessing the effectiveness of the counting and cardinality, operations and algebraic thinking, numbers and operations, measurement and data, and geometry. PK-3 Early Literacy: Offered autumn and spring. This class must be taken concurrently with Level 1 courses and is restricted to students who have been admitted to the Elementary Education program. The purpose of this course is to develop an understanding of emergent literacy and beginning reading and to examine developmentally appropriate methods of teaching and assessing reading to children in grades K-3.	3 Credits
	EDU 432 - Lit & Literacy for Yng Adlts Offered spring. Genre surveys; extensive reading, and analyzing of literature, authors and media addressed to students ages 12-18. Emphasizes effective teaching strategies for using high quality literature with middle school and secondary students. Not a substitute for EDU 331.	3 Credits
	EDU 438 - Ltrcy Asmnt, Diagnosis & Instr Offered spring. Prereq., EDU 397 or 481 for education students. Based on the analytic process, emphasis on assessing, identifying, and devising instructional strategies to meet students' reading/writing strengths and needs.	3 Credits
	EDU 441 - Orgnzng Reading/Writing Prgms Offered autumn. Prereq., EDU 397 or EDU 481. Emphasis on teaching writing across the curriculum and supervising the school-wide writing program. Planning, implementing, and assessing writing, and connecting reading and writing will be addressed.	3 Credits
	EDU 481 - Content Area Literacy Offered autumn and spring. Prereq., Admission to the Teacher Education Program. Theories, models, instructional approaches for using literacy for learning in content fields. Emphasis on research, instructional practice, classroom assessment, multicultural and discipline integration.	3 Credits

	EDU 497 - Teaching and Assessing (R-15) Offered autumn and/or spring. Prerequisite: Admission to the Teacher Education Program. This course number is used for multiple elementary and secondary methods courses. Check the class schedule or with your advisor regarding appropriate sections. 5-8 Mathematics: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Methods of teaching, assessing, and evaluating mathematics in the 5-8 middle grades including number and operations, rational numbers, ratio and proportion, measurement, algebra, expressions and equations, geometry, probability, statistics, and functions. K-8 Social Studies: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing teaching and assessing social studies teaching/learning opportunities that incorporate literature, primary sources and other developmentally appropriate activities. Overarching themes address diversity, integration across the curriculum and understanding state and national curriculum standards. K-8 Science: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Emphasis on developing, teaching, and assessing science teaching/learning opportunities that are inquiry-based, developmentally appropriate, integrated across the curriculum, and aligned with state and national curriculum standards. 4-8 Reading: 3 cr. Offered autumn and spring. This class must be taken concurrently with Level 3 courses and is restricted to students who have completed coursework in Levels 1 & 2. Preparation for teaching reading in a 4-8 setting so that all students are successful. Emphasis on reading to learn. Focus on using assessment to guide instruction, learning from trade books, textbooks, and electronic texts, activating prior knowledge, studying texts, and developing student enthusiasm for reading. 5-12 Science: 3 cr. Offered autumn. Methods of teaching science in the middle and secondary school. This course emphasizes the use of inquiry, problem-solving, appropriate use of technology, and assessment techniques that align with state and national curriculum standards. 5-12 Social Studies: 3 cr. Offered autumn. Foundations and purpose of the middle and secondary social studies curriculum. Elements of curricular design, including instructional methods, materials and assessment. 5-12 Mathematics: 4 cr. Offered autumn. Methods for teaching mathematics in grades 5-12 focusing on presentation of mathematics concepts and procedures through models, problem solving, and technology. Development of instructional strategies and classroom organizational models, discourse in the classroom, and multiple means for assessing student progress. 5-12 Business Subjects: 4 cr. Offered autumn. Methods for teaching business subjects in grades 5-12 focusing on content-specific topics in business, marketing, and information technology to include: instructional planning; effective teaching strategies (F2F & online); multiple means for assessing student progress; classroom management; and the relationship of the content area to standards-based curricula.	0 To 4 Credits
Minimum Required Grade: C-		21 Total Credits Required

Reading Teaching Minor Practicum

Rule: Complete the following course.

Note: All reading coursework must be complete prior to enrolling in the reading practicum.

	Course	Credits
	EDU 456 - Applictn of Literacy Modls K12 Offered summer. Prereq., EDU 438 or C&I 533. Provides classroom teaching experience under direct supervision. Candidates teach reading and writing and apply knowledge of assessing and correcting reading and writing difficulties in grades K-12.	6 Credits
Minimum Required Grade: C-		6 Total Credits Required

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track.

Teaching Special Education Licensure

Teaching Licensure - Education; Track: Teaching Special Education

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 34

Required Cumulative GPA: 3.0

Note: This program of study can only be completed as a teaching minor for those pursuing a teaching major in another content area or by currently licensed teachers. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information.

Early Childhood Special Education

Rule: Select one of the following courses.

	Course	Credits
	EDSP 401 - Intro Early Intervention Offered autumn odd-numbered years. Restricted to Curriculum & Instruction and Certification majors. This course covers issues relevant to serving very young children and their families. Topics include: ecological systems theory, typical and atypical development, family and child advocacy, naturalist environments, policies and procedures, models of intervention, transdisciplanary service delivery, Individual family service plans, and transition to preschool services. This course requires a 45-hour practicum.	3 Credits

	EDSP 403 - Curric/Mthds Early Spec Educ Offered autumn even-numbered years. Principles in selecting and adapting early childhood curriculum materials for young children with disabilities; development, implementation and evaluation of individualized education programs; and appropriate teaching strategies for the early childhood special education classroom. Includes a practicum.	3 Credits
Minimum Required Grade: B		3 Total Credits Required

Special Education Requirements

Rule: Complete all of the following courses.

	Course	Credits
	EDSP 405 - Assess of Students with Excep Focus on a variety of assessment procedures for students who qualify for Special Education services. A variety of assessments and assessment techniques will be taught, with a strong emphasis on the use of ecologically valid assessment tools. Specific measurement skills will be taught including observation skills. Field experience is required.	3 Credits
	EDSP 426 - Intro Transition & Community Introduction to issues and strategies for preparing adolescents and young adults with disabilities for the transition from school to future careers, post-secondary education, and other post-school environments. These issues are discussed within the context of more global efforts to create school-to-career programs in school settings for all students. A field experience is required.	3 Credits
	EDSP 454 - Adv Academic Interventions Evidence-based assessment and instruction techniques in all basic academic areas. Particular focus on general outcome and curriculum-based measures and the alignment of these and other assessments to interventions. A field experience is required.	3 Credits
	EDSP 456 - Intro Mthds Low Incidence Dis Offered spring and odd summers. Introduction to research-based methods of instruction for students with low incidence disabilities in basic communication, mobility, sensory, and social skills, as well as academic skills (especially literacy and general education curricular access). An introduction to augmentative and alternative communication (AAC) and assistive technology (AT) is also addressed. A field experience is required.	3 Credits
	EDSP 461 - Positive Behavior Supports Offered spring and odd-numbered summers. In-depth study of the principles and procedures for managing problem behaviors with an emphasis on prevention and classroom management. A field experience is required.	3 Credits
	EDSP 462 - Spec Ed Law, Policy, Practice Offered autumn and even-numbered summers. Historic and current perspectives on laws, policies and practices of the special education and related fields. Coverage of all aspects of the special education process including collaborative practices.	3 Credits

	EDU 438 - Ltrcy Asmnt, Diagnosis & Instr Offered spring. Prereq., EDU 397 or 481 for education students. Based on the analytic process, emphasis on assessing, identifying, and devising instructional strategies to meet students' reading/writing strengths and needs.	3 Credits
Minimum Required Grade: B		21 Total Credits Required

Special Education Student Teaching

Rule: Complete the following course.

Note: All special education coursework must be completed prior to the special education student teaching experience. An application is required to determine special education student teaching eligibility. See Teacher Education Services or the Office of Field Experiences for deadlines.

	Course	Credits
	EDSP 495 - Student Teaching: Special Educ Offered autumn and spring. Prereq., completion of all courses in the special education minor with a grade of B or higher and consent of advisor and Director of Field Experiences. Supervised field experience in special education.	1 To 10 Credits
Minimum Required Grade: B		10 Total Credits Required

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track.

Technology in Education Licensure

Teaching Licensure - Education; Track: Technology in Education

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 21

Required Cumulative GPA: 2.75

Note: Technology in Education is an Area of Permissive Special Competency. This minor leads to an area of permissive special competency in technology in education for those holding or attaining a Montana teaching license. It does not qualify as a teaching endorsement in Montana. See the Department of Curriculum and Instruction in the College of Education and Human Sciences for additional information.

Technology in Education Requirements

Rule: Complete all of the following courses.

Note: Equivalent courses from MSU-Bozeman, MSU-Billings and MSU-Northern may substitute. Please consult a C&I advisor for approved courses.

	Course	Credits

	C&I 515 - Computer/Tchnlgcl Appl in Educ Prereq., a basic computer course or demonstrated computer literacy. Computer systems and other hardware utilizing various software applications by administrators, counselors, librarians, teachers, and students. Level: Graduate	3 Credits
	C&I 570 - Instructional Teach Found Same as EDLD 570. General introduction to the field, theory, and profession of instructional technology. Definition of instructional technology; history of the field. Level: Graduate	3 Credits
	C&I 571 - Educ Tech Media Same as EDLD 571. Principles and practices of instructional design for integration of educational technology. Emphasis on role of technology in contemporary teaching/learning/assessing theory and practice, including learning styles and multiple intelligences. Level: Graduate	3 Credits
	C&I 580 - Dist Lrng Theory & Implem Same as EDLD 580. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction. Introduction to distance learning models and exploration of satellite and computer-mediated course development, implementation, and evaluation. Level: Graduate	3 Credits
	C&I 581 - Plng & Mgt for Tech in Edu Same as EDLD 581. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction. Creating, implementing, maintaining, and evaluating technology plans for educational institutions, including budgets, facilities, and hardware planning. Level: Graduate	3 Credits
	C&I 582 - Ed Tech Trends & Issues Same as EDLD 582. Exploration of trends and issues in the use of educational technology in a variety of settings. Level: Graduate	3 Credits
	C&I 584 - Authentic App Inst Design Same as EDLD 584. Development of practical competencies in such components of instructional technology as development, production, materials evaluation, and project management and implementation. Level: Graduate	3 Credits
Minimum Required Grade: C-		21 Total Credits Required

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track.

Secondary Licensure

Students preparing to teach at the middle or high school levels (license for grades 5-12) will declare a major in the subject area(s) they wish to teach, e.g., English, mathematics, or any other of the state-approved major content endorsement areas listed previously. They are advised within their major department(s) and, upon admission to the Teacher Education Program, they also are advised within the Department of Curriculum and Instruction regarding the requirements necessary to earn secondary licensure. All secondary licensure students seek admission to the Teacher Education Program, usually at the end of the sophomore year, and complete course work required for licensure in Curriculum and Instruction and in their major content area(s).

Applicants for Montana teaching licensure must: (1) satisfy all degree and licensure requirements as outlined below; and (2) be at least 18 years of age. Information about the Teacher Education Program is available in the department office and online at: http://www.coehs.umt.edu/

Teaching Licensure - Secondary Certification

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 41

Required Cumulative GPA: 2.75

Note: Teacher Education Program coursework is completed in addition to a teaching major and leads to secondary (5-12) or K-12 teaching licensure in that content area. Individuals must be admitted to the Teacher Education Program to enroll in any EDU courses. See the Curriculum and Instruction website for additional information regarding admission.

Teacher Education Program Prerequisite

Rule: This course must be completed before applying to the Teacher Education Program

	Course	Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Additional Licensure Requirements

Rule: Complete all of the following courses.

Note: Students may take any NASX course to fulfill this requirement. If you choose to take a course with a Native American focus outside of the Native American Studies Department, please consult with your C&I advisor for approval.

	Course	Credits
	HEE 233 - Health Issues Child/Adol Offered every term. Overview of current health issues affecting children and adolescents. Focus is on educational and preventive measures that can be implemented by teachers and schools through comprehensive school health education programs.	3 Credits
	NASX 105H - Intro Native Amer Studies Offered Autumn and Spring. Survey course to acquaint the student with Native American Studies by a general overview of Indian history, culture, philosophy, religious beliefs and contemporary issues.	3 Credits

Minimum Required Grade: C-	6 Total Credits Required

Education Coursework

Rule: Admission to the Teacher Education Program is required to enroll in the following courses.

Note: Math and Business majors are not required to complete EDU 370. They meet the technology requirement through departmental requirements. Music majors do not complete EDU 370 nor EDU 481. They meet the technology and literacy requirements through departmental requirements. English majors do not complete EDU 481. They meet the literacy requirement through departmental requirements. All students must complete major and/or minor teaching methods courses specific to their content areas. These methods course requirements are listed within the requirements for each program of study.

	Course	Credits
	EDU 221 - Ed Psych & Measuremnt Offered autumn and spring. Prereq., admission to Teacher Education program in secondary and K-12. Analysis of fundamental psychological concepts underlying classroom teaching and management, learning and evaluation including educational measurement. Emphasis on cognition, developmental, and motivational aspects of learning.	3 Credits
	EDU 345 - Excptnlty & Clsrm Mgmt Offered autumn and spring. Prereq., Admission to the Teacher Education Program in secondary and K-12. Focus on classroom management and the characteristics and instructional adaptations for exceptional students in the regular classroom. Addresses the Individuals with Disabilities Education Act and subsequent reauthorizations, presents practices for working with students who are at-risk and students with disabilities in inclusive settings, and includes technological considerations.	3 Credits
	EDU 370 - IntegTech into Educ Offered autumn and spring. Prereq., Admission to the Teacher Education Program and general computer literacy skills. Integration and use of computer and other technologies in education.	3 Credits
	EDU 407E - Ethics & Policy Issues Offered every term. Prereq., admission to Teacher Education Program and EDU 202 or EDU 395. Practical application of ethical principles of the teaching profession. Analysis of the American public school and major policy issues from historical, legal, political, social as well as ethical perspectives.	3 Credits
	EDU 481 - Content Area Literacy Offered autumn and spring. Prereq., Admission to the Teacher Education Program. Theories, models, instructional approaches for using literacy for learning in content fields. Emphasis on research, instructional practice, classroom assessment, multicultural and discipline integration.	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Education Field Experiences

Rule: Admission to the Teacher Education Program is required to enroll in the following courses.

Note: EDU 202 is a prerequisite to EDU 395. EDU 395 is taken concurrently with the content-specific methods course.

	Course	Credits
	EDU 202 - Early Field Experience Offered autumn and spring. Prereq., admission to Teacher Education Program in secondary and K-12. Guided introductory field experience for students committed to teaching as a profession. Connects field experience to content of co-requisite theory classes. Seminars include professional development portfolio, developmental level of students, diversity, learning/teaching strategies, motivation, classroom management, and assessment of learning.	1 Credits
	EDU 395 - Clinical Experience (R-4) Offered autumn and spring. Prereq., admission to the Teacher Education Program. Arranged field experience and seminar focusing on applying content from the co-requisite courses. This course number is used for multiple clinical experiences. Check the class schedule or with your advisor regarding the appropriate section. Elementary Education Majors: EDU 395 Clinical Experience Level 1 must be taken concurrently with Level 1 courses. EDU 395 Clinical Experience Level 2 must be taken concurrently with Level 2 courses. Secondary and K-12 Licensure Students: EDU 395 Clinical Experience K-8 and EDU 395 Clinical Experience 9-12 have a prerequisite of an initial field experience and should be taken concurrently with a secondary or K-12 methods course.	1 Credits
Minimum Required Grade: Pass		2 Total Credits Required

Student Teaching Field Experience

Rule: All content, methods, and education courses must be completed prior to enrolling in the student teaching semester.

Note: An application is required to determine student teaching eligibility. See Teacher Education Services or the Office of Field Experiences for deadlines. The EDU 494 course is completed for 1 credit and the EDU 495 course is completed for 14 credits.

	Course	Credits
	EDU 494 - Seminar:Refl Pract & App Rsrch (R-9) Required seminar during student teaching. Prereq., admission to the Teacher Education Program. Focuses on learning to conduct research on P-12 student performance to determine teaching effectiveness. Includes on-campus and/or on-line planning, conducting, and analyzing classroom practice.	1 To 9 Credits
	EDU 495 - Student Teaching (R-14) Offered autumn and spring. Arranged capstone clinical experience required for all professional licensure students. Prereq., admission to the Teacher Education Program, completion of all required field experiences and methods courses, an application to student teach, and the consent of the Director of Field Experiences. In addition, elementary education majors must complete all coursework in all previous levels. Secondary and K-12 licensure students must complete at least two-thirds of content coursework and receive approval by departments in their major and minor content areas.	1 To 14 Credits

Minimum Required Grade: C-	15 Total Credits Required

Teaching ESL Licensure

To sign up for this option, you need to contact the Curriculum and Instruction Department. Do not fill out a major/minor form for graduation or the major/minor/concentration section of the major change form. Approvals for this option must come from the Curriculum and Instruction Department.

Teaching Licensure - Education; Track: Teaching ESL

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 24

Required Cumulative GPA: 2.0

Note: Individuals completing a teaching minor must also complete a teaching major in another content area. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for more information. A minor GPA of 2.75 is required to be eligible for student teaching.

Core Courses

Rule: Must complete the following subcategories

16 Total Credits Required

Required Courses

Rule: All courses are required

Note: Those completing the teaching minor in ESL must take Ling 495 ESL Practicum for 3 credits.

	Course	Credits
	LING 470 - Linguistic Analysis Offered autumn. An in-depth examination of the formal properties of language, concentrating on the core areas of linguistic analysis (phonetics, phonology, morphology, syntax and semantics).	3 Credits
	LING 471 - Phonetics and Phonology Offered autumn. Prereq., LING 470. A study of phonetic and phonological systems from as many as 20 languages, most of them non–Indo–European; training in how to do linguistic analysis as well as linguistic theory. This course co-convenes with LING 571.	3 Credits
	LING 472 - Generative Syntax Offered autumn. Prereq., LING 470. A study of the human language sentence–formation system, the means for expressing semantic information as propositional content. Emphasis on the abstraction of utterances in the form of mathematical objects. This course co-convenes with LING 572.	3 Credits

	LING 480 - Tchg Engl as For Lang Offered autumn online. Prereq., LING 270 or equiv. Same as ENLI 480. The application of principles of modern linguistics to the problems of teaching English as a foreign language.	3 Credits
	LING 495 - ESL Practicum Offered autumn and spring. Prereq., or coreq., LING 480. Offered every term. Students with a teaching major take the course for 3 credits; others take it for 1 credit and do one third of the work.	1 To 3 Credits
Minimum Required Grade: C-		13 Total Credits Required

Core Options

Rule: Complete 1 of the following courses

	Course	Credits
	LING 477 - Bilingualism Offered autumn. Prereq., LING 270S or equiv. Societal and individual bilingualism: topics include language policy, maintenance, interference, code-switching and mixting, and bilingual education.	3 Credits
	LING 478 - Learner Language Offered spring. Prereq., LING 270S or equivalent. Observing/describing language learners' behaviors and, to a degree, advances toward proficiency (i.e., fluency plus accuracy); the presence of error as conditioned by a priori knowledge of language and implications for child and adult development; and applying typical methods of linguistic analysis to the (non-) systematic variants in language form characterizing developmental processes as a way of trying to explain variable behavior.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Elective Courses

Rule: Complete 2 of the following courses

Note: Ling 477 or Ling 478 may be taken as an Elective if not taken as a Required Course.

	Course	Credits
	LING 473 - Language and Culture Offered spring. Prereq., LING 470. Technical study of the relationships between grammatical categories and world view. This course co-convenes with LING 573.	3 Credits
	LING 481 - The ESL Professional Offered intermittently. Prereq. or coreq., LING 491; prereq., LING 480 or consent of instr. Professional development techniques for the independent language teacher: language test construction, self–critique of teaching strategies, materials development, curriculum evaluation and design, and electronic and print media resources for the language teaching professional.	3 Credits

	LING 489 - Morphology Offered spring. Prereq., LING 470. A survey of the morphological features of several unrelated languages to provide the student with a broad overview of how languages compare and contrast. This course co-convenes with LING 589.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Early Childhood Education Minor

Minor - Early Childhood Education (Minor)

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 24

Required Cumulative GPA: 2.0

Note: This minor can only be completed by individuals seeking K-8 elementary licensure or currently licensed elementary education teachers.

Required Courses

Rule: Must complete all of the following courses:

Note: Students must take two semesters of EDU 397: 1) Methods: PK-4 Early Numeracy and 2) Methods: PK-3 Early Literacy.

	Course	**Credits**
	EDEC 408 - EC Principles & Practices Prereq., Admission to the Teacher Education Program in early childhood: P-3. This course is an overview of principles and practices in early childhood education (ages birth through eight). The main topics to be covered will include: the sociological, professional, and theoretical perspectives of early childhood education with a focus on developmentally appropriate practice (DAP); the skills and dispositions needed in planning and implementing early care and education programs for all children; and education models in early childhood.Students must plan for a minimum of 45 hours in an early childhood setting to meet requirements for the application of course content. Co-convened course with EDEC 508.	3 Credits
	EDEC 410 - Families, Communities, Culture Prereq., Admission to the Teacher Education Program in early childhood: P-3. This on-line course explores the dynamics of working together with families of young children (birth - 8) in early childhood programs using a family-centered approach that places the child in the context of family and community. Students will explore developmental relationship building, communication, needs-based assessment and cultural diversity through readings, online discussion groups, an independent service-learning project and field-work. Co-convened with EDEC 510.	3 Credits

	EDEC 420 - Meeting Standards through Play Prereq., Admission to the Teacher Education Program in early childhood: P-3. This course features an in-depth examination of how early learning standards in all content areas (math, science, literacy, technology, physical education, and the arts) can be met through the design and facilitated use of play-based environments. Also examined will be the role of the teacher as environmental designer and facilitator of learning. Students must plan for a minimum of 45 hours in an early childhood setting to meet requirements for the application of course content. This course is co-convened with EDEC 520.	3 Credits
	EDEC 430 - SocEmot Dvlpmnt in Yng Child Prereq., Admission to the Teacher Education Program in early childhood: P-3. This on-line course examines the development, components, and influences of social competence in the early childhood years (birth – 8). Positive guidance techniques that enhance children's self-esteem and pro-social skills will be taught. Students will examine developmental theories, current literature, researched-based teaching strategies and assessment tools. Students must plan for a minimum of 45 hours in an early childhood setting to meet requirements for the application of course content. Co-convened with EDEC 530.	3 Credits
	EDEC 495 - EC Fieldwork/Practicum Offered autumn and spring. This course provides students the opportunity to participate in planning and facilitating learning activities in a multi-age early childhood program while also participating in an on-line seminar. Students will observe and facilitate learning in a model early childhood setting and participate in on-going written and verbal reflection to explore key teaching and learning issues. The course will focus on promoting student knowledge, skills, and dispositions in the areas of child observation and assessment, curriculum planning, child guidance, and integration of curriculum using a broad repertoire of teaching strategies. Students are required to be based in an approved licensed and/or accredited early childhood program for a minimum of 8 hours/week. Co-convened with EDEC 595.	3 Credits
	EDU 222 - Educational Psych Child Dev Offered autumn and spring. Prereq., Admission to the Teacher Education Program in elementary or early childhood: P-3. This course must be taken concurrently with Level 1 courses. This course will examine the classroom practices that impact elementary aged children's learning, motivation and development. The content is closely aligned with co-requisite courses and initial field experience, allowing opportunities for observation and practice of principles covered in class.	3 Credits

	EDU 397 - Methods: Teaching & Assessing (R-15) Offered autumn and spring. Prereq., admission to the Teacher Education Program in elementary or early childhood: P-3. This course number is used for multiple methods courses. Check the class schedule or with your advisor regarding appropriate sections. PK-4 Early Numeracy: Offered autumn and spring. This class must be taken concurrently with Level 1 courses and is restricted to students who have been admitted to the Elementary Education program. Students will learn mathematics concepts, methods of instruction, and the use of instructional materials appropriate for grades K-4 including the use of state and national standards for mathematics, appropriate technology, and manipulatives. Additionally, students will learn techniques for assessing the effectiveness of the counting and cardinality, operations and algebraic thinking, numbers and operations, measurement and data, and geometry. PK-3 Early Literacy: Offered autumn and spring. This class must be taken concurrently with Level 1 courses and is restricted to students who have been admitted to the Elementary Education program. The purpose of this course is to develop an understanding of emergent literacy and beginning reading and to examine developmentally appropriate methods of teaching and assessing reading to children in grades K-3.	3 Credits
Minimum Required Grade: C-		24 Total Credits Required

Health and Human Performance Department

Scott Richter, Chair

Vision

Health and Human Performance Professionals

Creating a Healthy, Progressive Global Community

Mission

In pursuit of our vision, the Department of Health and Human Performance (HHP) prepares quality graduates to be ethical and competent entry level professionals in health and human performance related occupations or candidates for advanced study in related disciplines. Within the liberal arts tradition of the University of Montana and the mission of the College of Education and Human Sciences, the Department of Health and Human Performance engages in professional education, scholarly activity, and meaningful public service. The department emphasizes mental, social, spiritual, and physical dimensions of health to promote healthy lifestyle choices and enhanced quality of life.

The Health and Human Performance Department has established the following goals in support of our vision and mission:

- ***Promote*** an understanding and appreciation for the scope of the profession
- ***Enhance*** student awareness of the departmental mission and goals
- ***Coordinate*** student development of the basic skills germane to effective practice as health and human performance professionals or successful pursuit of advanced studies
- ***Cultivate*** higher-order thinking skills that increase student involvement and interest in their own learning, promoting a lifelong quest for knowledge
- ***Nurture*** cognition of the multiple dimensions of health (physical, intellectual, emotional, spiritual, social and environmental)
- ***Advocate*** respect for the uniqueness and dignity of others.

Undergraduate students major in Health & Human Performance (HHP). HHP majors choose from one of the following five consentrations: Community Health and Prevention Sciences, Exercise Science Applied, Exercise Scienc Pre-Athletic Training, Exercise Science Pre-Professional, or Health Enhancement.

The **Community Health and Prevention Sciences concentration** prepares students with knowledge and skills related to assessing individual and community needs prior to planning, implementing, and evaluating programs designed to encourage healthy lifestyles and environments. Individuals who will be most successful in the community health option are those who are deeply interested in the interrelationship among all aspects of health (social, emotional, mental, spiritual and physical) and in the life and behavioral sciences. In addition, success in this field requires imagination and creativity in applying scientific knowledge to strategies for

individual and community change through a wide range of educational, environmental and political approaches. Graduates of this program will be prepared to take the National Certification Exam for Health Education Specialists.

There are three options **Exercise Science**: Pre-Professional, Applied, and Pre-Athletic Training. The ***Pre-Professional concentration*** is for students planning to continue on in higher education and is designed to provide students with an in-depth science background and prepares students for post-baccalaureate study in exercise physiology and related health sciences such as medical school, physical therapy, physician's assistant, athletic training, occupational therapy or other medical programs. There are adequate electives in this program for most students to complete the required pre-requisite courses for graduate health science degrees. Successful graduates of this option should possess the knowledge and skills to qualify for the American College of Sports Medicine Certified Clinical Exercise Physiologist certification (requires additional clinical hours). The ***Applied concentration*** is designed to prepare students for jobs as strength and conditioning coaches, athletic coaches, personal trainers, elderly services providers, corporate wellness personnel and directors, fitness center directors and other fitness related jobs or graduate studies in Exercise Science. Successful graduates of this track should possess the knowledge and skills to qualify for the American College of Sport Medicine Certified Exercise Physiologist certification and/or National Strength and Conditioning Association Certified Strength and Conditioning Specialist. The ***Pre-Athletic Training*** *concentration* is designed for students interested in applying for the Master's in Athletic Training Program (see information below).

The **Health Enhancement** concentration prepares students to use a variety of educational strategies designed to facilitate the adoption of healthy behaviors in K-12 students. Upon acceptance into the College of Education and Human Sciences, and successful completion of the course requirements, students will be eligible for a Montana K-12 teaching license. See Admission Policies below.

The **Master's in Athletic Training** Program prepares competent entry-level athletic trainers for employment in educational and clinical settings or post-graduate study. The Athletic Training curriculum is designed to help students develop competency in evidence based medicine, prevention and health promotion, clinical examination and diagnosis, acute care of injury and illness, therapeutic interventions, psychosocial strategies and referral, healthcare administration and professional development and responsibility. Successful graduates should possess the knowledge and skills to qualify for the Board of Certification Examination.

The graduate curriculum in Health and Human Performance at the University of Montana prepares post-graduates to become effective health and human performance professionals or competitive candidates for advanced study in related disciplines through a comprehensive program of study and guided research. Development of the following is considered essential in achieving a graduate degree:

1. Oral and written communication skills,
2. An understanding of current research literature in one's chosen specialization and the independent pursuit of learning beyond the confines of curricular requirements,
3. Appropriate technological skills,
4. Ability to design, conduct, and report research in a scholarly fashion,
5. Personal characteristics, sense of responsibility, and professional behavior requisite for effective functioning as an advanced health and human performance professional.

Graduate options include Exercise Science, Community Health and Prevention Sciences, Athletic Training and a generalist degree in Health and Human Performance. For more information regarding the department's graduate program refer to either:

The University of Montana Graduate Programs and Admissions catalog: http://www.umt.edu/grad/

The College of Education and Human Sciences Graduate website: http://coehs.umt.edu/departments/hhp/graduate_programs/default.php

Activity Classes

The HHP department also provides a large activity program (ACT classes numbered 100-287, ACTV 189 and HHP 170-179) which includes instruction in a wide variety of individual, team, recreational, and fitness activities. Goals of this program include helping students:

1. Develop and maintain long-term health-related fitness,
2. Develop motor performance skills that facilitate regular and continuous participation in physical activity, and
3. Develop the adult "inner athlete" who continually strives to reach optimal potential through involvement in challenging endeavors.

Any University of Montana student may elect to apply up to four credits toward a baccalaureate degree. For descriptions of the activity classes offered, refer to the website at http://coehs.umt.edu/departments/hhp/activity_classes/default.php.

Special Degree Requirements

Refer to graduation requirements listed previously in the catalog. See index.

Students must fulfill the requirements listed below. All HHP majors must earn a minimum grade of a C- in all required courses, including prerequisites, except for special cases of higher requirements in Athletic Training and Health Enhancement noted below. In-department and out-of-department courses specifically listed in this catalog as requirements for Health and Human Performance majors must be taken for a traditional letter grade.

The University of Montana symbolic systems requirement is met by completing one of the following statistics courses and any pre-requisite courses: STAT 216 Introduction to Statistics, or PSYX 222 Psychological Statistics, or SOCI 202 Social Statistics, or WILD 240 Introduction to Biostatistics, or EDU 421 Statistical Procedures in Education. All options must meet this requirement.

Admission Policies for Health Enhancement Option

The Health Enhancement option is designed for individuals who wish to teach in K-12 school systems. Application for admission to the College of Education must be made (refer to http://coehs.umt.edu/departments/hhp/default.php). Applications are accepted twice a year; however, the number of students admitted into the program is limited. Application is made no sooner than after the completion of 30 hours of course work. A cumulative GPA of 2.75 is necessary for application.

To successfully complete the program in Health Enhancement, a student must receive a grade of C (2.00) or above in every course in the following areas: teaching major, professional education courses, a drug abuse course, PSYX 100S, WRIT 101, and EDU 481. These courses must be taken as a traditional letter grade.

Admission Policies for the Masters in Athletic Training Degree Program

Athletic Training Program (ATP)

The University of Montana-Missoula offers an accelerated entry level Master's in Athletic Training program housed within the Health and Human Performance Department. The program meets the standards established by the Commission on Accreditation of Athletic Training Education (CAATE). The Master's in AT Program was granted CAATE accreditation in 2015. The ATP is a demanding curriculum which requires dedication and commitment. Upon completion there are a variety of professional career opportunities.

The University of Montana offers an accelerated Master's in Athletic Training Program. This program allows students to take three years of pre-requisite courses and general education requirements, followed by 2 years full time in a Master's in Athletic Training program, including summers. There are two ways in which a student may attain a Master's Degree in Athletic Training:

Option 1: A five-year program in which students earn a Bachelor of Science Degree in Health and Human Performance and a Master's Degree in Athletic Training.

Option 2: A two-year master's program designed for students who already have a baccalaureate degree

Upon completion of the Master's in Athletic Training Program, students will be eligible to sit for the Board of Certification (BOC) Exam.

*Both the Bachelor's degree and Master's degree will be officially awarded at the time of graduation.

Following are the requirements for application, admission, and retention of the Athletic Training Program (ATP). Academic advisors are available to assist students with this interesting and challenging professional program.

Admission. Students who desire admission into the Master's in Athletic Training Program must submit a formal application. This application must be submitted by the deadline (February 1st) prior to your proposed admission into the professional program. If the application deadline falls on a weekend, applications may be submitted the next business day by 5pm. Applications received after the deadline will be considered on a rolling admissions basis if available slots exist.

A review board consisting of the Athletic Training Program Director, Clinical Director, Preceptors, professional students and possibly other professionals, will evaluate each student applying for admission to the professional program. Formal notification of admission to the Master's program will be made in writing.

Candidates who are NOT admitted to the program will also receive written notification of this decision. Students may be selected as alternates and if a vacancy should become available prior to summer semester, these students will be informed. Not all qualified candidates may be admitted to the Master's program due to limited enrollment in clinical experiences.

For more information on applying to the professional program, please go to http://coehs.umt.edu/umat/applications.php.

ADMISSION REQUIREMENTS FOR PROFESSIONAL ATHLETIC TRAINING PROGRAM (ATP)

1. Students must apply and be accepted to the University of Montana's Graduate School http://www.umt.edu/grad/Apply/Graduate%20Degree%20Admission.php
2. Students must have a minimum GPA of 3.0 for all college coursework (a GPA below 3.0 may be considered)
3. Completed pre-requisite courses (students may be enrolled in pre-requisite courses at time of application)

4. Official transcript(s) of all college coursework

Professional ATP

As a student in the Athletic Training Program at the University of Montana, students must meet the following retention standards:

- Enroll as a full-time student (unless approved by Program Director)
- Maintain a cumulative grade point average of 3.0 or higher
- Achieve no more than 2 "C" grades in graduate courses
- Achieve satisfactory evaluations in each Clinical Phase before progressing
- Successfully complete coursework in the sequence indicated by the program of study unless approved by Athletic Training Program Director
- Abide by the Code of Ethics of the University and those established by the National Athletic Trainers' Association

Students are expected to complete at least 20 hours every two weeks and a maximum of 60 hours in two weeks and many of those hours may be during evenings and weekends. Students who fail to meet the retention criteria will be placed on probation in the Athletic Training Program for a maximum of two semesters. This may limit progress of course sequencing and clinical phases. If standards are not met by the end of the probationary period, the student will be dismissed from the Athletic Training Program. Students who are placed on probation may require remediation as deemed appropriate by the Program Director.

For further information on clinical education requirements, please visit the athletic training website.

Additional Costs Associated with ATP Program

There will be additional costs (above tuition and fees) for the clinical rotations. Program fee: there is an additional fee of $925/semester in addition to regular tuition of fees. This fee will help cover the cost of lab equipment, accreditation costs, adjunct teaching, and software. Other costs may include, but are not limited to: Criminal Background Check ($55), Initial NATA Membership Fee (approximately $60), Polo Shirts ($30), and Medical Pack/Kit ($30).

Transportation is needed for all off-campus clinical sites. Each student will have a minimum of one off-campus site.

General HHP Program Requirements

First Aid and CPR Exit Certifications

All Health and Human Performance students are required to have the appropriate certification in first aid/emergency care and CPR at graduation. The following certifications will meet this competency:

Any one of the following current first aid/emergency care certifications:

- American Academy of Orthopedic Surgeons (AAOS) - Emergency Medical Responder
- National Safety Council Level - First Responder
- Wilderness First Responder
- American Heart Association - First Responder

Plus one of the following CPR certifications:

- American Heart Association (Health Care Provider)
- American Red Cross (Professional Rescuer)

Or Certification as an Emergency Medical Technician

Health and Human Performance students may use available elective credits to take ECP 120/121, First Responder and CPR, to meet this competency, or they may elect to fulfill the competency through one of the department approved agencies. Academic credit for ECP 120/121 will not be awarded for certifications earned at off-campus approved agencies other than the Health and Human Performance Department at the University of Montana.

Upper-division Writing Expectation

The HHP Department offers three upper-division writing courses to fulfill the General Education writing requirements; KIN 447, AHAT 342 and HEE 301. Exercise Science and Community Health and Prevention Sciences students are required to complete KIN 447 (Analytical and Communication Techniques) or AHAT 342

(Therapeutic Interventions), and Health Enhancement students are required to complete HEE 301 (Instructional Strategies in Secondary Physical Education).

Undergraduate students must complete requirements for a minimum of one of the options listed below. The typical student may take more than four years to complete these requirements, especially in the Health Enhancement option.

Activities

Back to Top

- ACT 103 - Jump Rope Fitness and Skill
  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course
- ACT 105 - Aerobic Fitness
  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course
- ACT 106 - Beg Conditioning and Fitness
  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course
- ACT 107 - Beginning Aerobic Dance
  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course
- ACT 109 - Beginning Racquetball
  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 110 - Beginning Weight Training

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in activity courses (ACT 100-287) in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 112 - Curling

  Credits: 1. (R-4) Students will learn the curling rules, scoring, etiquette, basic strategies, methods and styles of stone deliver. In addition, how to "read' the ice/call for sweeping, most effective sweeping techniques, and the different positions on a curling team will be taught.

- ACT 113 - Beginning Softball

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 114 - Beginning Rock Climbing

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 115 - Soccer

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 118 - Hockey

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 119 - Beginning Nordic Skiing

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 129 - Circuit Training

  Credits: 1. (R-4) Upon completing this course, the student will be able to develop their strength, endurance, and flexibility by participating in various fitness programs or sports, demonstrate proper form and skills for various fitness programs, and recognize and demonstrate appropriate fitness etiquette.

- ACT 136 - Aerial Yoga

  Credits: 1. (R-4) This course teaches traditional Hatha yoga with an aerial hammock, aiding the student in postures. In order to accumulate a person who is new to yoga, the aerial hammock offers the body assistance to find correct alignment and decompression of the spine without pressure on the head or hands.

- ACT 140 - Beginning Basketball

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 143 - Beginning Table Tennis

Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 144 - Horse

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 145 - Beginning Dodgeball

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 146 - Beginning Golf

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 150 - Beginning Yoga

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 151 - Beginning Billiards

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 152 - Beginning Handball

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 154 - Beginning Tai Qi

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 157 - Beginning Martial Arts

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website.

- ACT 163 - 5/10 K Race Training

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website.

- ACT 164 - Triathlon Training

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 167 - Mountain Biking

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 169 - Beginning Tennis

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 171 - Physical Fitness I

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 172 - Physical Fitness II

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 173 - Beg Fly Fishing/Fly Tying

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 174 - Introduction to Backpacking

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 175 - Fly Fishing

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 176 - Fnd of Whitewater Rafting

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 177 - Fundamentals of Kayaking

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students

graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
PE Activity Skills Course

- ACT 178 - Canoeing

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 179 - Basic Canoeing

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 185 - Multicultural Games

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 186 - Firefighter Conditioning

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website.

- ACT 191 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- ACT 202 - Intermediate Racquetball

  Credits: 1. An intermediate course for the sport of racquetball. Students should have a fundamental understanding of the sport, including the rules of the game and its variations, and the necessary equipment. Intermediate-level instruction will focus more on stroke mechanics, and strategies. Students will also be learning the enjoyment of playing racquetball, which is a game that can last a lifetime.

- ACT 207 - WC Aerobics

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 215 - AMGA Climbing Wall Instructor

  Credits: 1. This course will address the technical skills necessary to manage an instructional program at an indoor climbing wall facility and will address the following general topic areas: instructor roles, responsibilities and professionalism, client orientation and instruction, risk management, lesson planning, teaching basic climbing skills, including movement, teaching lead climbing skills, teaching top-rope and lead belaying techniques, use of available equipment and facility, basic rescue and emergency procedures.

- ACT 218 - Ultimate Disc

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 219 - Folf

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students

graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 222 - Ski Camp

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 225 - Snow Bowl Ski Area

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 228 - Ski Instructor's Preparation

  Credits: 2. Offered spring. Prereq., consent of instr. Open to all students with advanced to expert skiing skills. Techniques of teaching skiing including: skill concepts and contemporary skiing movements; teaching cycle; movement analysis; personal skiing improvement. Prepares student for certification with (PSIA) Professional Ski Instructors of America.

- ACT 229 - Snowboard Instructor Prep

  Credits: 2. Offered spring. Prereq., consent of instr. Open to students with advanced to expert riding skills. Techniques of teaching snowboarding including: skill concepts and contemporary snowboarding movements; teaching cycle; movement analysis; personal riding improvement. Prepares student for certification with (ASSI) American Association of Snowboard Instructors.

- ACT 231 - Pilates - Yoga Fusion

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 232 - Alpine Core Studio

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 233 - Freestone Climbing

  Credits: 1. Offered every term. This course is a free climb, no ropes course. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 234 - Jazz for Fun & Fitness

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 235 - Belly Dancing

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- ACT 237 - Trampoline Arial Acrobatics

Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
PE Activity Skills Course

- ACT 250 - Pilates

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 257 - Martial Arts and Self Defense

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 258 - CFM Mixed Martial Arts

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website.

- ACT 259 - AAK American Kenpo

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 271 - Swimming for Fitness

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 274 - Scuba Diving

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website.

- ACT 286 - Fencing

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 287 - Strength & Flexibility

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes:
  PE Activity Skills Course

- ACT 291 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Offerings of visiting professors, new courses, or current topics.

- ACT 292 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of advisor and instr. Course material appropriate to the needs and objectives of the individual student.

- ACT 337 - Aquatic Certifications

  Credits: 1 TO 2. (R-4) Offered spring. Prereq., HHP 238 or equivalent certifications. Offered on a rotating basis. Training for Water Safety Instructor, Lifeguard Training Instructor, or Adapted Aquatics Instructor. Red Cross Instructor's Certificate awarded upon successful completion of requirements.

- ACT 391 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- ACT 490 - Undergraduate Research

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Directed individual research and study appropriate to the background and objectives of the student. Course Attributes: Research & Creative Schlrshp

- ACT 491 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- ACT 492 - Independent Study

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.

- ACT 494 - Workshop

  Credits: 1 TO 6. (R-6) Offered intermittently. Special courses experimental in nature dealing with a relatively narrow, specialized topic of particular current interest. Credit not allowed toward a graduate degree.

- ACT 498 - Internship

  Credits: 2 TO 6. (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 335. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester. Course Attributes: Internships/Practicums Internship graduation limit 6

- ACT 499 - Capstone

  Credits: 1 TO 3. (R 6) Offered every term. Prereq., consent of instr. Independent work under the University omnibus option. See index. Course Attributes: Omnibus Course

Activities - Varsity

Back to Top

- ACTV 189 - Varsity Athletics

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

Allied Hlth: Athletic Training

Back to Top

- AHAT 210 - Prev and Care Athletic Injur

  Credits: 2. Offered autumn and Spring (winter session). Coreq., AHAT 213. Development of knowledge of prevention, assessment, treatment, rehabilitation, emergency care of athletic injuries.

- AHAT 213 - Prev and Care Athletic Injur L

Credits: 1. Coreq., AHAT 210. Development of practical skills in prevention, assessment, treatment, rehabilitation, and emergency care of athletic injuries.

- AHAT 292 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of advisor and instr. Course material appropriate to the needs and objectives of the individual student.

- AHAT 324 - Assessment of the Extremities

  Credits: 2. Coreq., AHAT 325. The study and practice of techniques used when assessing athletic injuries to the upper and lower extremities, including the spine.

- AHAT 325 - Assessment of Exremities Lab

  Credits: 1. Coreq., AHAT 324. The study and practice of techniques used when assessing athletic injuries to upper and lower extremities including the spine.

- AHAT 342 - Therapeutic Interventions

  Credits: 2. Offered spring. Prereq., WRIT 121 or 201. Theories and application methods of interventions such as therapeutic modalities and exercise for athletic injuries. Substantial reading and writing component. Course Attributes: Writing Course-Advanced

- AHAT 343 - Therapeutic Interventions Lab

  Credits: 1. Offered spring. Coreq., AHAT 342. Laboratory sessions examining theories and application methods of interventions such as therapeutic modalities and exercise for athletic injuries.

- AHAT 479 - Topics in Sports Medicine

  Credits: 3. Offered spring. Prereq., Junior standing or higher. The etiology and management of sports related injuries/illnesses. Includes: therapeutic use of drugs, pre-participation screening techniques, ergogenic aids, the aging athlete, the sports medicine team concept and current medical treatment of sports injuries.

- AHAT 490 - Undergraduate Research

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.

- AHAT 492 - Independent Study

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.

- AHAT 498 - Internship

  Credits: 2 TO 6. (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 335. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester. Course Attributes: Internship graduation limit 6

Athletic Training

Back to Top

- ATEP 534 - Techniques Athletic Training I

  Credits: 3. Prereq., Athletic Training Student. Serves as an introduction to athletic training practice. Emphasis on the prevention, care, and management of acute injuries and illnesses, as well as risk management, environmental concerns, and protective taping and equipment. Level: Graduate

- ATEP 535 - Athletic Training Techniques II

  Credits: 3. Provides an investigation into the study of evidence based medicine, epidemiology and injury surveillance, cultural competency, and mental health issues. Level: Graduate

- ATEP 540 - Practicum Athletic Training I

Credits: 3. Prereq., Athletic Training Student. Builds on skills previously acquired and introduces new skills related to current coursework. Students will be assigned to a clinical education rotation under the direct supervision of a clinical preceptor. First in the series of four practicum courses. Level: Graduate

- ATEP 541 - Practicum Athletic Training II

  Credits: 3. Prereq., Athletic Training Student. Expands on skills previously acquired and introduces new skills related to current coursework. Students will be assigned to a clinical education rotation under the direct supervision of a clinical preceptor. Second in the series of four practicum courses. Level: Graduate

- ATEP 542 - Lower Extremity Assessment

  Credits: 3. Prereq., Athletic Training Student. Provides a study of anatomy and physiology, assessment, evaluation techniques, treatment, and management of conditions affecting the lower extremities and lumbar spine. Level: Graduate

- ATEP 544 - Upper Extremity Assessment

  Credits: 3. Prereq., Athletic Training Student. Provides a study of anatomy and physiology, assessment, evaluation techniques, treatment, and management of conditions affecting the upper extremities, head, and thoracic and cervical spine. Level: Graduate

- ATEP 546 - General Medical Assessment

  Credits: 3. Prereq., Athletic Training Student. Examines the recognition, assessment, and management of general medical conditions and illnesses. Level: Graduate

- ATEP 550 - Pract in AT III

  Credits: 3. Prereq., Athletic Training Student. Broadens skills previously acquired and introduces new skills related to current coursework. Students will be assigned to a clinical education rotation under the direct supervision of a clinical preceptor. Third in the series of four practicum courses. Level: Graduate

- ATEP 551 - Pract in AT IV

  Credits: 3. Prereq., Athletic Training Student. Reviews and refines skills previously acquired and evaluated in previous coursework. Students will be assigned to a clinical education rotation under the direct supervision of a clinical preceptor. Fourth in the series of four practicum courses. Level: Graduate

- ATEP 566 - Therapeutic Modalities

  Credits: 3. Offered spring. Prereq., ATEP 550. Physiology, indications, contraindications, and the application of therapeutic modalities for athletic injuries. Level: Graduate

- ATEP 569 - Clinical Anatomy Laboratory

  Credits: 1. Offered Fall. Prereq., Athletic Training Student. Clinical applications of anatomy in Athletic Training. Laboratory time for practical applications including prosected cadavers, surface anatomy, osteology, radiology, functional analysis of movement, applied clinical anatomy and sports application. Level: Graduate

- ATEP 572 - Therapeutic Exercise

  Credits: 3. Offered spring. Prereq., ATEP 566. Theories and application methods of comprehensive therapeutic exercise programs for athletic injuries. Level: Graduate

- ATEP 574 - Manual Therapy Techniques

  Credits: 3. Offered summer. Prereq., ATEP 572. Theories and application methods of comprehensive manual therapy for athletic injuries. Level: Graduate

- ATEP 578 - Org & Ad in AT

  Credits: 3. Prereq., Athletic Training Student. Explores leadership, organization, administration, and legal issues in athletic training. Topics include leadership; insurance; ethics; professional development; the planning, organization, operations, and assessment of athletic training programming and facilities. Fiscal and risk management will also be examined. Level: Graduate

- ATEP 580 - Pharmacology for Sports Medicine

  Credits: 3. Prereq., graduate level student. Explores the pharmaceutical and chemical processes of therapeutic interventions and therapies. This course examines the constraints placed on patients in the performance environment as well management, protocols, and legal issues. Level: Graduate

Community Health

Back to Top

- CHTH 355 - Theory Pract Comm Hlth Ed
  Credits: 3. Offered autumn. Prereq., KIN 205. History, philosophy, and theory related to community health education and health promotion. Includes the application of program development principles and health promotion strategies to community health programs.
- CHTH 435 - Human Response To Stress
  Credits: 3. Offered autumn and spring. Prereq., junior status. The study of psychosomatic and somatopsychic techniques for relaxation and self-enhancing strategies.
- CHTH 445 - Prgrm Plan in Comm Health
  Credits: 3. Offered spring. Prereq., CHTH 355. Overview of the issues, approaches, and techniques community health educators and professionals utilize in planning and implementing programs to assist communities in improving health status and reducing risky behaviors and their determinants. This course co-convenes with HHP 541. Course Attributes: Co-Convened Course
- CHTH 485 - Theories of Hlth Behav and Cou
  Credits: 3. Offered spring. Exploration of the helping role as it relates to health behavior, health assessment, problem-solving and referral skills. Application of theories to facilitation of healthy behavior changes.
- CHTH 490 - Undergraduate Research
  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.
- CHTH 492 - Independent Study
  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.
- CHTH 498 - Internship
  Credits: 2 TO 6. (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 355. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester. Course Attributes: Internship graduation limit 6

Coaching

Back to Top

- COA 205 - Introduction to Coaching
  Credits: 1 TO 2. (R-4) Offered intermittently. Covers a variety of activities to include coaching theories, competitive coaching strategies, training methods and techniques. Covers requirements for the bronze level of the American Sport Education Program (ASEP). Course Attributes: Coaching Course
- COA 405 - Adv Concepts in Coaching
  Credits: 3. Offered spring. Prereq., junior or senior undergraduate status or graduate status. This class will introduce students to a solid foundation in coaching to include: coaching theories, competitive coaching strategies, training methods and techniques. This course will cover the requirements for the bronze level of the American Sport Education Program (ASEP). Course graded credit/no credit or for a letter grade. The class is appropriate for coaches at all levels but will focus on basic skills of coaching for youth through high school. Course Attributes: Coaching Course
- COA 494 - Workshop
  Credits: 1 TO 6. (R-6) Offered intermittently. Special courses experimental in nature dealing with a relatively narrow, specialized topic of particular current interest. Credit not allowed toward a

graduate degree. Course Attributes: Coaching Course

Emergency Care Provider

Back to Top

- ECP 100 - First Aid and CPR

  Credits: 1. Offered spring. Instruction will cover CPR, use of an automated external defibrillator (AED) and relief of foreign-body airway obstruction (FBAO). The First Aid component will cover general principles as well as medical, injury and environmental emergencies. Students will receive AHA Heartsaver CPR and First Aid certification. This class does not meet First Aid requirements for HHP majors.

- ECP 101 - Pediatric First Aid and CPR

  Credits: 1. Offered intermittently. Within the guidelines of the American Heart Association, this course is designed to provide students with the basic knowledge and certification in: CPR for victims of all ages, use of an automated external defibrillator (AED) relief of foreign body airway obstruction (FBAO) and basic first aid procedures (medical, trauma and environmental emergencies) with a focus on the pediatric patient. Upon successful completion of this course students will receive American Heart Association Heartsaver Pediatric First Aid/CPR certification.

- ECP 102 - Wilderness First Aid

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- ECP 120 - Emergency Medical Respondr Lec

  Credits: 2. Offered every term. Coreq., ECP 121. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 121 provides certifications by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.

- ECP 121 - Emergency Medical Respondr Lab

  Credits: 1. Offered every term. Coreq., ECP 120. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 120 provides certification by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.

- ECP 122 - Wilderness First Responder

  Credits: 2. Offered intermittently. Instruction in the prevention, recognition, and treatment of backcountry illness and injury. Successful students receive an Aerie Wilderness First Responder certification and an American Heart Association Heartsaver CPR certification. This course meets HHP department First Aid requirement but does not meet the CPR requirement.

- ECP 191 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- ECP 331 - Wilderness EMT

  Credits: 3. Offered intermittently. EMT-Basic curriculum with significantly more detail concerning care for patients in remote settings. Students must be 18 year old and never been convicted of a felony to qualify for certification. This course meets HHP department First Aid and CPR graduation requirements.

- ECP 332 - EMT and Incident Management

  Credits: 5. This course follows the DOT's National Registry of EMTs (NREMT) curriculum and is approved by the NREMT and the State of Montana Board of Medical Examiners. Incident management training includes mass-casualty incidents, extended rescue and evacuation scenarios. Clinical experience includes a two day health clinic in Costa Rica, ambulance and hospital emergency department clinical observations in Montana. Co-requisite courses PTRM 391 Wilderness Rescue and Survival Skills; PTRM 391 Wilderness Medicine and Risk Management.

Health Enhancement

Back to Top

- HEE 203 - Professional Activities I

  Credits: 2. Offered Autumn. The instruction of basic skills for tennis, basketball, and Western Swing. Techniques, drills, and strategies will be taught. Demonstration and instruction skills developed. Active participation required.

- HEE 204 - Professional Activities II

  Credits: 2. Offered Spring. The instruction of basic skills for soccer, volleyball, and golf. Techniques, drills, and strategies will be taught. Demonstration and instruction skills developed. Active participation required.

- HEE 291 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- HEE 292 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of advisor and instr. Course material appropriate to the needs and objectives of the individual student.

- HEE 301 - Meth of Secondary HE

  Credits: 3. Offered spring. Application of educational theory in planning, analyzing, and presenting learning experiences to typical and atypical populations in secondary school physical education for students in grades 7-12. Active participation required. Course Attributes:
  Writing Course-Advanced

- HEE 302 - Meth of Inst Strat in Elem PE

  Credits: 3. Offered every term. Prereq. admission into Teacher Education Program in the College of Education and HEE 233. Application of educational theory in planning, analyzing, and presenting learning experiences to typical and atypical populations in elementary school physical education for children in grades K-6. Active participation required.

- HEE 340 - Methods of Health Education

  Credits: 3. Offered autumn even-numbered years. Prereq., admission to the teacher education program. Focus on developing and implementing strategies to teach K-12 health education.

- HEE 391 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- HEE 490 - Undergraduate Research

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.

- HEE 492 - Independent Study

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.

- HEE 498 - Internship

  Credits: 2 TO 6. (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 335. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester. Course Attributes:
  Internship graduation limit 6

Health and Human Performance

Back to Top

- HHP 170 - Peak Court Sports

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list

of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- HHP 172 - CFM Crossfit

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- HHP 173 - YMCA Classes

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- HHP 174 - FVB Bowling

  Credits: 1. Offered every term. Students may include up to but not more than 4 credits earned in HHP 100-179 activity courses in the total number of credits required for graduation. Students graded Credit/No Credit based on participation and a strict attendance policy. For a complete list of all classes offered go to the HHP Activity Program website. Course Attributes: PE Activity Skills Course

- HHP 238 - Lifeguarding - New Method

  Credits: 2. Offered autumn and spring. Prereq., HHP 149 or equiv. skills. Skill development needed for the safe participation in various aquatic activities including the ability of self-recovered rescue of others. Provides the necessary knowledge and skills to serve as a pool lifeguard.

- HHP 520 - Educational Research

  Credits: 3. Offered every term. Same as C&I and EDLD 520. An understanding of basic quantitative and qualitative research methodology and terminology, particularly as they are used in studies presented in the professional literature. Level: Graduate

- HHP 522 - Cog/Beh Intrvnts Perf Psyc

  Credits: 3. Offered intermittently. Prereq., HHP 470 or equiv. Focus is on cognitive-behavioral interventions specific to enhancing human performance in a variety of individual and group settings. Strategies introduced based on research from health psychology, sport psychology, exercise psychology, clinical and counseling psychology Level: Graduate

- HHP 523 - Case Studies in Perf Psych

  Credits: 3. Offered intermittently. Prereq., consent of instr. Through the usage of both real and hypothetical case studies, the course will examine the field of sport/performance psychology and its role in the broader field of sports medicine. Level: Graduate

- HHP 524 - Ethics & Human Perf

  Credits: 3. Offered spring, even numbered years. A critical examination of the ethical issues dominating the field of health and human performance and beyond with special emphasis on developing the conceptual frameworks needed to articulate our concerns and engage in meaningful dialogue with others. Level: Graduate

- HHP 525 - Advanced Biomechanics

  Credits: 3. This course is focused on developing laboratory skills and an advanced understanding of the quantitative and qualitative basis for human motion. Particular emphasis will be placed on the Newtonian mechanics governing biological motion and the roles of the musculo-skeletal, nervous and cardio-vascular systems during human activity. This integrative approach will be used to quantify and understand motion by, and within, the human body; examples will be drawn from the sub-disciplines of clinical gait analysis, gerontology, sports medicine, biological engineering and performance physiology. The lecture portion of this course is co-convened with KIN425 Biomechanics. Level: Graduate

- HHP 528 - Adv Exercise Prescription

  Credits: 3. Offered spring even years. Prereqs., Graduate status or consent of the instructor. This class presents the principles and practices of advanced athletic performance training in a thorough and useful sequence. Testing and improving power, strength, speed, quickness, coordination, agility, flexibility, local muscular endurance, and cardiovascular aerobic capacity and endurance are covered based on the scientific record. Students will learn how to tailor sport

specific training exercises and drills and periodize the training program precisely for peak performance at critical points in the competitive season. Level: Graduate

- HHP 529 - Adv Exercise Physiol I

  Credits: 3. Offered autumn. Prereq., HHP 377, 378 or equiv. Advanced study of the effect of work, activity and exercise on human biochemistry, metabolism, endocrinology and muscle function. Level: Graduate

- HHP 530 - Adv Exercise Physiol II

  Credits: 3. Offered spring odd years. Prereq., HHP 529 or equiv. Advanced study of system physiology (circulatory, respiratory and renal function) and environmental factors applied to physical work, activity and exercise Level: Graduate

- HHP 531 - Lab Proc In Exer Science

  Credits: 3. Offered autumn. Introduction to common laboratory tools associated with clinical and health assessment techniques, research measures, and data collection. Level: Graduate

- HHP 540 - Comm Hlth Promotion Strategies

  Credits: 3. Offered autumn even-numbered years. Exploration of the role of the health professional in the development and implementation of educational, organizational, economic, and/or environmental strategies that promote individual and community health. Level: Graduate

- HHP 541 - Prgrm Plan in Comm Health

  Credits: 3. Prereq. HHP 540, admission to the Health and Human Performance major, and graduate standing. Overview of the issues, approaches, and techniques community health educators and professionals utilize in planning and implementing programs to assist communities in improving health status and reducing risky behaviors and their determinants. Application of program planning research methods including needs analyses, data collection, theory application, strategy development, and evaluation. This course co-convenes with CHTH 445. Level: Graduate
  Course Attributes: Co-Convened Course

- HHP 542 - Advanced Study Mind/Body/Spirit

  Credits: 3. This course is a comprehensive exploration of the body, mind and spirit relationship. An in-depth examination of the concepts, theoretical application, and research of the mind/body/spirit relationship will be applied to health, prevention of disease, and healing used in contemporary society. Conventional thinking will be stretched & challenged as diverse M/B/S ideas, constructs and paradigms will be considered & discussed. Level: Graduate

- HHP 544 - CBPR Methods for Health

  Credits: 3. Offered autumn even years. Instruction will present the principles and practice of community-based participatory research methods (CBPR) and mixed-methods approachs that offers strategies for studying and addressing health and social problems. Level: Graduate

- HHP 594 - Seminar

  Credits: 1 TO 3. (R-6) Offered spring. Prereq., consent of instr. A review and discussion of current research. Topics vary. Level: Graduate

- HHP 595 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate

- HHP 596 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student. Level: Graduate

- HHP 597 - Research

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., HHP 486, 520. Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate

- HHP 598 - Internship

  Credits: 1 TO 4. (R-4) Offered every term. Prereq., current First Aid and CPR certification. Consent of advisor and instructor. Community Health prereq HHP 540, HHP 544. Supervised field work in public and private agencies and institutions. 45 hours of internship site work = 1 credit. Level: Graduate

- HHP 599 - Professional Paper

Credits: 1 TO 3. (R-3) Offered every term. Prereq., HHP 486, 520. Preparation of a professional paper appropriate to the needs and objectives of the individual student. Level: Graduate

- HHP 699 - Thesis

  Credits: 1 TO 6. (R-6) Offered every term. Preparation of a thesis or manuscript based on research for presentation and/or publication. Level: Graduate

Health

Back to Top

- HTH 292 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of advisor and instr. Course material appropriate to the needs and objectives of the individual student.

- HTH 370 - Peer Health Education

  Credits: 3. Offered spring. Introduction to peer health education strategies and techniques. Instruction in the areas of wellness, drug and alcohol abuse prevention, and sexual assault prevention. Students develop and implement a peer health program focused on prevention of major health problems among college students.

- HTH 395 - Peer Health Practicum

  Credits: 1 TO 3. (R-6) Offered autumn and spring. Prereq., HTH 370. Practical experience in planning, coordinating, and implementing health education activities for the campus community. Students address topics related to wellness, drug and alcohol prevention, or sexual assault awareness. Course Attributes: Internships/Practicums

- HTH 430 - Hlth and Mind/Body/Spirit

  Credits: 3. Offered autumn. Prereq., junior standing. Overview of how the mind/body/spirit relationship affects health. Examination of current research exploring how thoughts, emotions, attitudes, and beliefs influence and mediate health outcome. Exploration of the theoretical applications of mind/body/spirit in health and healing used in contemporary society.

- HTH 465 - Leading Hlth, Hmn Perform Orgs

  Credits: 3. Offered every term. Prereq., KIN 205 and junior standing. Leadership, management, organizational structure assertiveness, conflict management, public relations, decision-making, budget management, and a broad overview of human resource management, all as they relate to health and human performance settings.

- HTH 475E - Leg Eth Issues Hlth Ex Pro

  Credits: 3. Prereq., upper-division or graduate status. Legal bases for litigation in the health and exercise professions, with emphasis on negligence, liability, and risk identification and risk management. Utilizing the Western ethical traditions, the ethics component examines moral/ethical development through the lifespan via analysis of specific human behaviors. Course Attributes: Ethical & Human Values Course

- HTH 481 - Teaching HHP

  Credits: 1 TO 3. (R-4) Offered every term. Prereq., consent of instructor. Students assist in the preparation and grading of demonstrations and laboratory assignments, and laboratory instruction of undergraduate students enrolled in HHP laboratory courses. Students are given advanced instruction in principles of the HHP course.

- HTH 492 - Independent Study

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.

- HTH 498 - Internship

  Credits: 2 TO 6. (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121(or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 335. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester. Course Attributes: Internship graduation limit 6

Kinesiology

Back to Top

- KIN 201 - Basic Exercise Prescription

  Credits: 3. Offered every term. Theory, principles, and practice of exercise prescription for aerobic and resistance exercise programs for health, fitness and performance. Students must register for the lecture and a linked lab. Course Attributes: Service Learning/Volunteer Service Learning

- KIN 205 - Foundations of HHP

  Credits: 3. Offered autumn and spring. An overview of the foundational principles comprising the field of HHP with special emphasis on the historical and philosophical foundations, and the evolution of the unity of mind/body concept. Includes an overview of program options, analysis of future directions, and career choices.

- KIN 248 - Prin Optimal Perfm for Athlts

  Credits: 2. Offered autumn and spring. Introduction to an optimal performance model, with focus upon specific physical, psychological, and environmental factors that contribute to human performance.

- KIN 292 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Prereq., consent of advisor and instr. Course material appropriate to the needs and objectives of the individual student.

- KIN 310 - Strength Training & Cond

  Credits: 2. This course is designed to introduce students to the fundamentals of aerobic exercise and resistance training related to health, fitness and performance. Subject matter will include, but is not limited to maximizing student involvement in the understanding of physical training and the designing of exercise programs for health (both physical and mental), fitness and performance. This course will lay a basic practical foundation for students to design training programs, understand and design programs for athletic performance and to develop the fundamental theories of training for future coaches.

- KIN 320 - Exercise Physiology

  Credits: 3. Offered every term. Prereq., BIOH 370 or BIOH 211N, KIN 201; coreq., KIN 321. Investigation of the physiological changes and the significance of these changes as they occur during physical work, activity and exercise. Focus on basic energy, musculosketal, nervous, cardiovascular and respiratory systems as they relate to aerobic and anaerobic exercise. Emphasis will be placed on the response of these systems to both acute exercise, and the adaptations to chronic exercise. Credit not allowed toward graduate degree in the exercise science option in Health and Human Performance.

- KIN 321 - Exercise Physiology Lab

  Credits: 1. Offered autumn and spring. Prereq., BIOH 370 or BIOH 211N; coreq., KIN 320. Laboratory session examining the physiological effect of the physical work, activity and exercise on the functions of the human body. Credit not allowed toward graduate degree in the exercise science option in Health and Human Performance.

- KIN 322 - Kinesiology

  Credits: 3. Offered autumn. Prereq., BIOH 211N or BIOH 370; coreq., KIN 323. Anatomy and kinesiology of the neuromusculoskeletal system and body cavities in relation to movement and function.

- KIN 323 - Anatomical Kinesiology Lab

  Credits: 1. Offered autumn. Prereq., BIOH 211N or BIOH 370; coreq., KIN 322. Anatomy and kinesiology of the neuromusculoskeletal system and body cavities in relation to movement and function.

- KIN 330 - Motor Learning and Control

  Credits: 3. Offered autumn and spring. Prereq., BIOH 201N or BIOH 365. Focused on developing an understanding of the anatomy and physiology within the nervous system necessary for movement. Establishes an understanding of the basic science involved in the control of motor tasks, and uses this foundation to evaluate case studies that will focus on sport performance, clinical deficits, age-related alterations, learning of motor tasks following injury, and other motor-related tasks.

- KIN 410 - Adv Strength Training & Cond

  Credits: 3. Offered spring. Prereq., KIN 320, senior or graduate student status. Advanced resistance and aerobic exercise testing and prescription for both healthy and clinical populations.

- KIN 425 - Biomechanics

  Credits: 3. Offered spring. Prereq., KIN 320 & M 115 or higher and major in health and human performance or athletic training. Description and analysis of the fundamental principles of human movement. Includes quantitative study of the Newtonian mechanics governing biological motion and the roles of the musculo-skeletal, nervous and cardio-vascular systems during human activity.

- KIN 440 - Sport Psychology

  Credits: 3. Offered autumn. Prereq., upper-division or graduate status. Course content is focused on the historical development of sport psychology, with emphasis upon the major principles and tactics of the discipline, including motivation, confidence, imagery, leadership, and team building.

- KIN 447 - Analytical & Comm Techniques

  Credits: 3. Offered every term. Prereq., WRIT 101, WRIT 121 or WRIT 201. Analysis and communicative critique of literature, cinema, and other forms of popular media that contain allegorical life themes. Substantial reading, speaking and writing component. Emphasis on improving and maintaining communication skills. Course Attributes: Writing Course-Advanced

- KIN 460 - ECG Assessment

  Credits: 2. Offered autumn. Prereq., junior, senior, or graduate status. Laboratory sessions combined with class sessions to understand electrocardiography and the assessment of electrocardiograms, both at rest and during exercise.

- KIN 480 - Teaching Anatomy, Physiology

  Credits: 4. (R-4) Offered every term. Prereq., student must have received at least a “B” in Human Anatomy and Physiology and consent of instructor. Students assist in preparation and grading of demonstrations and laboratory assignments, and provide laboratory instruction of undergraduate students enrolled in BIOH 201N/202N-211N/212N. Students are given advanced instruction in principles of human anatomy and physiology.

- KIN 483 - Exercise Disease & Aging

  Credits: 3. Offered spring. Prereq., KIN 320,321, 460; coreq. KIN 484. Focus on guidelines for exercise testing and prescription for individuals with chronic disease including heart disease, diabetes, hypertension, arthritis, osteoporosis, elderly and pulmonary disease. Class requires 25 assigned hours of service learning. Covers material necessary for ACSM clinical certification exam when combined with KIN 201, 320, 321, 460, and 484. Course Attributes: Service Learning/Volunteer Service Learning

- KIN 484 - Exercise Disease & Aging Lab

  Credits: 1. Offered spring. Prereq., KIN 320, 321; coreq., KIN 483. Laboratory sessions focus on practical exercise testing and prescription for individuals with chronic disease including coronary heart disease, diabetes, hypertension, arthritis, osteoporosis, elderly and pulmonary disease; basic ECG testing and analysis. Covers material necessary for ACSM clinical certification exam when combined with KIN 201, 320, 321, 460, and 483.

- KIN 490 - Undergraduate Research

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student.

- KIN 492 - Independent Study

  Credits: 1 TO 3. (R-6) Offered every term. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student.

- KIN 498 - Internship

  Credits: 2 TO 6. (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 335. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester. Course Attributes: Internship graduation limit 6

- KIN 499 - Capstone
  Credits: 1 TO 3. (R 6) Offered autumn. Prereq., consent of instr. Independent work under the University omnibus option. See index.

Nutrition

Back to Top

- NUTR 221N - Basic Human Nutrition
  Credits: 3. Offered autumn and spring. The principles of science as applied to current concepts and controversies in the field of human nutrition. Course Attributes: Natural Science Course (N)
- NUTR 411 - Nutrition For Sprts & Exercise
  Credits: 3. Offered autumn and spring. Prereq., KIN 320 and junior standing. Nutritional parameters of athletic performance including intervention planning, energy production, the energy nutrients, vitamins and minerals, principles of balanced diets, timing and composition of intakes, hydration, weight management strategies, and nutritional needs for special situations.

Health Behavior Coaching (C)

Admission requirements for the Certificate Program in Health Behavior Coaching include: 1) Sophomore level or higher standing; 2) 3.0 GPA; 3) BIOH 201 and 202 pre-requisite or co-requisite; and 4) letter of intent.

The Student Wellness Program and HHP are collaborating on the Health Behavior Coach Certificate. Staff in the Wellness Program will offer the 2 day training and will be able to monitor whether students have met that requirement prior to receiving their certificate.

Professional Certificate - Health Behavior Coaching

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 25

Required Cumulative GPA: 2.0

Note: Admission requirements for the Certificate Program in Health Behavior Coaching include: 1) Sophomore level or higher standing; 2) 3.0 GPA; 3) BIOH 201 and 202 pre-requisite or co-requisite; and 4) letter of intent.

Core Courses

Rule: Students must complete the following courses

Note: HTH 395 must be completed for 2 credits and CHTH 498 must be completed for 4 credits

	Course	Credits
	CHTH 485 - Theories of Hlth Behav and Cou Offered spring. Exploration of the helping role as it relates to health behavior, health assessment, problem-solving and referral skills. Application of theories to facilitation of healthy behavior changes.	3 Credits

	CHTH 498 - Internship (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 355. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester.	2 To 6 Credits
	HTH 370 - Peer Health Education Offered spring. Introduction to peer health education strategies and techniques. Instruction in the areas of wellness, drug and alcohol abuse prevention, and sexual assault prevention. Students develop and implement a peer health program focused on prevention of major health problems among college students.	3 Credits
	HTH 395 - Peer Health Practicum (R-6) Offered autumn and spring. Prereq., HTH 370. Practical experience in planning, coordinating, and implementing health education activities for the campus community. Students address topics related to wellness, drug and alcohol prevention, or sexual assault awareness.	1 To 3 Credits
	HTH 430 - Hlth and Mind/Body/Spirit Offered autumn. Prereq., junior standing. Overview of how the mind/body/spirit relationship affects health. Examination of current research exploring how thoughts, emotions, attitudes, and beliefs influence and mediate health outcome. Exploration of the theoretical applications of mind/body/spirit in health and healing used in contemporary society.	3 Credits
	KIN 201 - Basic Exercise Prescription Offered every term. Theory, principles, and practice of exercise prescription for aerobic and resistance exercise programs for health, fitness and performance. Students must register for the lecture and a linked lab.	3 Credits
	KIN 483 - Exercise Disease & Aging Offered spring. Prereq., KIN 320,321, 460; coreq. KIN 484. Focus on guidelines for exercise testing and prescription for individuals with chronic disease including heart disease, diabetes, hypertension, arthritis, osteoporosis, elderly and pulmonary disease. Class requires 25 assigned hours of service learning. Covers material necessary for ACSM clinical certification exam when combined with KIN 201, 320, 321, 460, and 484.	3 Credits
	KIN 484 - Exercise Disease & Aging Lab Offered spring. Prereq., KIN 320, 321; coreq., KIN 483. Laboratory sessions focus on practical exercise testing and prescription for individuals with chronic disease including coronary heart disease, diabetes, hypertension, arthritis, osteoporosis, elderly and pulmonary disease; basic ECG testing and analysis. Covers material necessary for ACSM clinical certification exam when combined with KIN 201, 320, 321, 460, and 483.	1 Credits

	NUTR 221N - Basic Human Nutrition Offered autumn and spring. The principles of science as applied to current concepts and controversies in the field of human nutrition.	3 Credits
Minimum Required Grade: C-		25 Total Credits Required

Applied Exercise Science B.S.

Bachelor of Science - Health & Human Performance; Exercise Science - Applied Option

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 105
Required Cumulative GPA: 2.0

Lower Division Departmental Required Courses

Rule: All courses are required.

Note: Students should take ECP 120, ECP 121 within two years of graduation, in order to ensure current certification. Students may substitute outside Emergency Medical Responder Certification for these courses.

	Course	**Credits**
	ECP 120 - Emergency Medical Respondr Lec Offered every term. Coreq., ECP 121. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 121 provides certifications by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.	2 Credits
	ECP 121 - Emergency Medical Respondr Lab Offered every term. Coreq., ECP 120. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 120 provides certification by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.	1 Credits
	KIN 201 - Basic Exercise Prescription Offered every term. Theory, principles, and practice of exercise prescription for aerobic and resistance exercise programs for health, fitness and performance. Students must register for the lecture and a linked lab.	3 Credits
	KIN 205 - Foundations of HHP Offered autumn and spring. An overview of the foundational principles comprising the field of HHP with special emphasis on the historical and philosophical foundations, and the evolution of the unity of mind/body concept. Includes an overview of program options, analysis of future directions, and career choices.	3 Credits
	NUTR 221N - Basic Human Nutrition Offered autumn and spring. The principles of science as applied to current concepts and controversies in the field of human nutrition.	3 Credits

Minimum Required Grade: C-	18 Total Credits Required

Outside Major Lower Division Required Courses

Rule: All courses are required.

Note: Students interested in Medical School should pay special attention to those additional requirements. Please meet with the Medical School Adviser in the HHP Department if you intend to also major in Pre-Medical studies.

Note: One semester of General and one semester of Organic Chemistry is required. Students may substitute M 151 in place of M 121, M 122 series. Students may take any other Statistics course that is pre-approved by their adviser (PSYX 222, SOCI 202, WILD 240, or EDU 421). Students may substitute WRIT 201 or WRIT 222 for WRIT 121.

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits

	M 122 - College Trigonometry Offered autumn and spring. Prereq., M 121 or ALEKS placement >= 4. Preparation for calculus based on college algebra. Review of functions and their inverses. Trigonometric functions and identities, polar coordinates and an optional topic such as complex numbers, vectors or parametric equations. Credit not allowed for both M 122 and M 151.	3 Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
	WRIT 121 - Intro to Technical Writing Offered every term. Introduction to technical writing situations that integrate text, design, and graphics. Emphasis is on evidence-based, informative writing that uses design and graphics to visually represent logic and organization. Course focuses on writing as a process and includes student self-assessment. Major assignments include a pure technical document, exploration of credibility, and public science writing. Students are expected to write without major faults in grammar or usage and to have basic computer literacy.	3 Credits
Minimum Required Grade: C-		40 Total Credits Required

Upper Division Departmental Required Courses

Rule: All courses are required.

Note: Students take KIN 498 for 3 to 6 credits.

	Course	Credits
	HTH 475E - Leg Eth Issues Hlth Ex Pro Prereq., upper-division or graduate status. Legal bases for litigation in the health and exercise professions, with emphasis on negligence, liability, and risk identification and risk management. Utilizing the Western ethical traditions, the ethics component examines moral/ethical development through the lifespan via analysis of specific human behaviors.	3 Credits
	KIN 320 - Exercise Physiology Offered every term. Prereq., BIOH 370 or BIOH 211N, KIN 201; coreq., KIN 321. Investigation of the physiological changes and the significance of these changes as they occur during physical work, activity and exercise. Focus on basic energy, musculosketal, nervous, cardiovascular and respiratory systems as they relate to aerobic and anaerobic exercise. Emphasis will be placed on the response of these systems to both acute exercise, and the adaptations to chronic exercise. Credit not allowed toward graduate degree in the exercise science option in Health and Human Performance.	3 Credits
	KIN 321 - Exercise Physiology Lab Offered autumn and spring. Prereq., BIOH 370 or BIOH 211N; coreq., KIN 320. Laboratory session examining the physiological effect of the physical work, activity and exercise on the functions of the human body. Credit not allowed toward graduate degree in the exercise science option in Health and Human Performance.	1 Credits
	KIN 330 - Motor Learning and Control Offered autumn and spring. Prereq., BIOH 201N or BIOH 365. Focused on developing an understanding of the anatomy and physiology within the nervous system necessary for movement. Establishes an understanding of the basic science involved in the control of motor tasks, and uses this foundation to evaluate case studies that will focus on sport performance, clinical deficits, age-related alterations, learning of motor tasks following injury, and other motor-related tasks.	3 Credits
	KIN 425 - Biomechanics Offered spring. Prereq., KIN 320 & M 115 or higher and major in health and human performance or athletic training. Description and analysis of the fundamental principles of human movement. Includes quantitative study of the Newtonian mechanics governing biological motion and the roles of the musculo-skeletal, nervous and cardio-vascular systems during human activity.	3 Credits
	KIN 447 - Analytical & Comm Techniques Offered every term. Prereq., WRIT 101, WRIT 121 or WRIT 201. Analysis and communicative critique of literature, cinema, and other forms of popular media that contain allegorical life themes. Substantial reading, speaking and writing component. Emphasis on improving and maintaining communication skills.	3 Credits

	KIN 498 - Internship (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 335. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester.	2 To 6 Credits
	NUTR 411 - Nutrition For Sprts & Exercise Offered autumn and spring. Prereq., KIN 320 and junior standing. Nutritional parameters of athletic performance including intervention planning, energy production, the energy nutrients, vitamins and minerals, principles of balanced diets, timing and composition of intakes, hydration, weight management strategies, and nutritional needs for special situations.	3 Credits
Minimum Required Grade: C-		35-38 Total Credits Required

Outside Major Upper Division Required Courses

Rule: All courses are required.

Note: It is strongly recommended that students take either BIOH 112 OR BIOH 113 OR BIOB 160 prior to taking Anatomy and Physiology.

Students may substitute BIOH 201/202 and BIOH 211/212 for their Anatomy and Physiology requirements. BIOH 112 OR BIOH 113 OR BIOB 160 AND CHMY 121 are prerequisites for the 300 level Anatomy and Physiology Series.

	Course	**Credits**
	BIOH 365 - Human AP I for Health Profsns Offered autumn. Prereq., CHMY 121N or CHMY 141N; BIOB 160N or BIOH 112 or 113. Introduction to basic cellular structure and function. The fundamental facts and concepts of the anatomy and physiology of cells and tissues, the integumentary, musculoskeletal, nervous and special senses with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
	BIOH 370 - Human AP II for Health Profsns Offered spring. Prereq., BIOH 365. The fundamental facts and concepts of the anatomy and physiology of the endocrine, circulatory, respiratory, digestive, urinary and reproductive systems with an emphasis on clinical application for students preparing for careers in health care. Laboratory component includes presentation of cadaver prosections and models.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Elective Courses

Rule: Electives require adviser pre-approval.

Note: Electives require adviser pre-approval.

Students may use any pre-approved Math and Science Elective courses in this category. At least 3 must be Upper Division Credits. Special care should be taken if BIOH 201/202 and BIOH 211/212 were used for Anatomy and Physiology requirements, as more Upper Division Credits may need to be used in this category.

Minimum Required Grade: C-

Pre-Professional Exercise Science B.S.

Bachelor of Science - Health & Human Performance; Exercise Scn - PreProfessional Option

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 103

Required Cumulative GPA: 2.0

Major Lower Division Departmental Required Courses

Rule: All courses are required.

Note: Students should take ECP 120, ECP 121 within two years of graduation in order to ensure current certification. Students may also substitute outside Emergency Medical Responder Certification for these courses.

	Course	Credits
	ECP 120 - Emergency Medical Respondr Lec Offered every term. Coreq., ECP 121. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 121 provides certifications by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.	2 Credits
	ECP 121 - Emergency Medical Respondr Lab Offered every term. Coreq., ECP 120. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 120 provides certification by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.	1 Credits
	KIN 201 - Basic Exercise Prescription Offered every term. Theory, principles, and practice of exercise prescription for aerobic and resistance exercise programs for health, fitness and performance. Students must register for the lecture and a linked lab.	3 Credits
	KIN 205 - Foundations of HHP Offered autumn and spring. An overview of the foundational principles comprising the field of HHP with special emphasis on the historical and philosophical foundations, and the evolution of the unity of mind/body concept. Includes an overview of program options, analysis of future directions, and career choices.	3 Credits
	NUTR 221N - Basic Human Nutrition Offered autumn and spring. The principles of science as applied to current concepts and controversies in the field of human nutrition.	3 Credits

Minimum Required Grade: C-	12 Total Credits Required

Outside Major Lower Division Required Courses

Rule: All courses are required.

Note: Students interested in Medical School should pay special attention to those additional requirements. Please meet with the Medical School Adviser in the HHP Department if you intend to also major in Pre-Medical studies.

Note: One semester of General and one semester of Organic Chemistry are required. Students may substitute M 151 in place of M 121, M 122 series. Students may take any other Statistics course that is pre-approved by an adviser (PSYX 222, SOCI 202, WILD 240, or EDU 421). Students may substitute WRIT 201 for WRIT 121.

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 124N - Intro to Organic & Biochem Lab Offered autumn and spring. Prereq. or coreq., CHMY 123N. Laboratory to accompany CHMY 123N.	2 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits
	M 122 - College Trigonometry Offered autumn and spring. Prereq., M 121 or ALEKS placement >= 4. Preparation for calculus based on college algebra. Review of functions and their inverses. Trigonometric functions and identities, polar coordinates and an optional topic such as complex numbers, vectors or parametric equations. Credit not allowed for both M 122 and M 151.	3 Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits

	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PHSX 207N - College Physics II Offered autumn and spring. Prereq. PHSX 205N and prereq. or coreq., PHSX 208N. Electricity, magnetism, light, and modern physics. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 208N - College Physics II Laboratory Offered autumn and spring. Prereq., PHSX 206N, prereq, or coreq., PHSX 207N. Electricity, magnetism, light and modern physics. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
	WRIT 121 - Intro to Technical Writing Offered every term. Introduction to technical writing situations that integrate text, design, and graphics. Emphasis is on evidence-based, informative writing that uses design and graphics to visually represent logic and organization. Course focuses on writing as a process and includes student self-assessment. Major assignments include a pure technical document, exploration of credibility, and public science writing. Students are expected to write without major faults in grammar or usage and to have basic computer literacy.	3 Credits

Description and analysis of the fundamental principles of human movement. Includes quantitative study of the Newtonian mechanics governing biological motion and the roles of the musculo-skeletal, nervous and cardio-vascular systems during human activity.	3 Credits

	KIN 447 - Analytical & Comm Techniques Offered every term. Prereq., WRIT 101, WRIT 121 or WRIT 201. Analysis and communicative critique of literature, cinema, and other forms of popular media that contain allegorical life themes. Substantial reading, speaking and writing component. Emphasis on improving and maintaining communication skills.	3 Credits
	KIN 460 - ECG Assessment Offered autumn. Prereq., junior, senior, or graduate status. Laboratory sessions combined with class sessions to understand electrocardiography and the assessment of electrocardiograms, both at rest and during exercise.	1 Credits
	KIN 483 - Exercise Disease & Aging Offered spring. Prereq., KIN 320,321, 460; coreq. KIN 484. Focus on guidelines for exercise testing and prescription for individuals with chronic disease including heart disease, diabetes, hypertension, arthritis, osteoporosis, elderly and pulmonary disease. Class requires 25 assigned hours of service learning. Covers material necessary for ACSM clinical certification exam when combined with KIN 201, 320, 321, 460, and 484.	3 Credits
	KIN 484 - Exercise Disease & Aging Lab Offered spring. Prereq., KIN 320, 321; coreq., KIN 483. Laboratory sessions focus on practical exercise testing and prescription for individuals with chronic disease including coronary heart disease, diabetes, hypertension, arthritis, osteoporosis, elderly and pulmonary disease; basic ECG testing and analysis. Covers material necessary for ACSM clinical certification exam when combined with KIN 201, 320, 321, 460, and 483.	1 Credits
	KIN 498 - Internship (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 335. Elective Courses

Rule: Must be approved by adviser

Note: Electives require adviser pre-approval.

It is strongly recommended that students take either BIOH 112 OR BIOH 113 OR BIOB 160 in this category prior to taking either Anatomy and Physiology.

Students can use any pre-approved Math and Science Elective courses in this category. 6 must be Upper Division Credits. Special care should be taken if BIOH 201/202 and BIOH 211/212 were used for Anatomy and Physiology requirements, as more Upper Division Credits may need to be used in this category.

Minimum Required Grade: C-

12 Total Credits Required

Health Enhancement B.S.

Individuals interested in teaching in K-12 schools must complete a degree in the content area they want to teach plus the teacher preparation program through the Department of Curriculum and Instruction. Individuals must complete the teaching major/teaching track within that degree program, which may contain different course requirements than the academic major since the sequence of courses is designed to meet state standards. Upon completion of the degree program with the teaching track and the secondary licensure program, one will be eligible for a standard Montana teaching license in this content area.

- Secondary Education Licensure Program
- Licensure Degree Requirements

Bachelor of Science - Health & Human Performance; Health Enhancement Option

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 93

Required Cumulative GPA: 2.0

Note: The Bachelor of Science degree in HHP with the Health Enhancement option requires 130 total credits to graduate. Students must be formally admitted to the Teacher Education Program and complete all of the professional education licensure requirements. See the Department of Curriculum & Instruction in the College of Education and Human Sciences for information. A major GPA of 2.75 is required to be eligible for student teaching.

Lower Division Departmental Required Courses

Rule: All courses are required.

Note: Students should take ECP 120 and ECP 121 within two years of graduation in order to ensure current certification. Students may substitute outside Emergency Medical Responder Certification for these courses.

	Course	Credits
	AHAT 210 - Prev and Care Athletic Injur Offered autumn and Spring (winter session). Coreq., AHAT 213. Development of knowledge of prevention, assessment, treatment, rehabilitation, emergency care of athletic injuries.	2 Credits
	AHAT 213 - Prev and Care Athletic Injur L Coreq., AHAT 210. Development of practical skills in prevention, assessment, treatment, rehabilitation, and emergency care of athletic injuries.	1 Credits
	ECP 120 - Emergency Medical Respondr Lec Offered every term. Coreq., ECP 121. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 121 provides certifications by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.	2 Credits
	ECP 121 - Emergency Medical Respondr Lab Offered every term. Coreq., ECP 120. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 120 provides certification by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.	1 Credits
	HEE 203 - Professional Activities I Offered Autumn. The instruction of basic skills for tennis, basketball, and Western Swing. Techniques, drills, and strategies will be taught. Demonstration and instruction skills developed. Active participation required.	2 Credits
	HEE 204 - Professional Activities II Offered Spring. The instruction of basic skills for soccer, volleyball, and golf. Techniques, drills, and strategies will be taught. Demonstration and instruction skills developed. Active participation required.	2 Credits
	HEE 233 - Health Issues Child/Adol Offered every term. Overview of current health issues affecting children and adolescents. Focus is on educational and preventive measures that can be implemented by teachers and schools through comprehensive school health education programs.	3 Credits

	HTH 110 - Personal Health and Wellness Offered autumn and spring. Focus on health principles and their relevance in contemporary society, the evaluation and application of scientific advances to hypothetical lifestyles, and on contemporary problems in life.	3 Credits
	KIN 201 - Basic Exercise Prescription Offered every term. Theory, principles, and practice of exercise prescription for aerobic and resistance exercise programs for health, fitness and performance. Students must register for the lecture and a linked lab.	3 Credits
	KIN 205 - Foundations of HHP Offered autumn and spring. An overview of the foundational principles comprising the field of HHP with special emphasis on the historical and philosophical foundations, and the evolution of the unity of mind/body concept. Includes an overview of program options, analysis of future directions, and career choices.	3 Credits
	NUTR 221N - Basic Human Nutrition Offered autumn and spring. The principles of science as applied to current concepts and controversies in the field of human nutrition.	3 Credits
Minimum Required Grade: C-		25 Total Credits Required

Outside Major Lower Division Required Courses

Rule: All courses are required.

Note: Students may take any adviser approved Statistics course in place of STAT 216 (PSYX 222, SOCI 202, WILD 240, or EDU 421). Students may substitute WRIT 201 for WRIT 121.
Note: BIOH 201N and 202N are co-requisites completed for a total of 4 credits and BIOH 211N and 212N are co-requisites completed for a total of 4 credits.

	Course	**Credits**
	BIOH 201N - Human Anat Phys I (equiv 301) Offered autumn and spring. Prereq., introductory science course or college-prep high school biology course recommended. Comprehensive knowledge of human form and function necessary for students preparing for health-related professions. Emphasis on structure, function and homeostatic regulation of body systems with presentation of basic concepts in chemistry and microbiology as they relate to human anatomy and physiology. Covers tissues through nervous system. Required, integrated laboratory includes some dissection.	4 Credits
	BIOH 202N - Human Anat and Phys I Lab Offered autumn and spring. Coreq., BIOH 201. Basic knowledge necessary for students in health-related programs. Emphasis on normal anatomy and physiology with presentation of basic concepts in chemistry and microbiology as they relate to human anatomy and physiology. Covers tissues through nervous system. A cadaver lab is included.	4 Credits

	BIOH 211N - Human Anat Phys II (equiv 311) Offered autumn and spring. Prereq., and continuation of BIOH 201N. Comprehensive knowledge of human form and function necessary for students in health-related programs. Emphasis on structure function and homeostatic regulation of body systems with presentation of basic concepts in chemistry and microbiology as they relate to human anatomy and physiology. Covers endocrine through reproductive systems. Required integrated laboratory includes frequent dissection.	4 Credits
	BIOH 212N - Human Anat Phys II Lab Offered autumn and spring. Prereq., BIOH 201N. Coreq., BIOH 211. Continuation of 201N. Basic knowledge necessary for students in health-related programs. Emphasis on normal anatomy and physiology with presentation of basic concepts in chemistry and microbiology as they relate to human anatomy and physiology. Covers endocrine through reproductive systems. A cadaver lab is included.	4 Credits
	BIOM 250N - Microbiology for Hlth Sciences Offered spring. Infectious diseases, including concepts of virulence, resistance, prevention and control of microbial diseases in the individual and in the community. If laboratory experience is desired, the student may enroll concurrently in BIOM 251. Credit not allowed toward a major in microbiology.	3 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	NASX 105H - Intro Native Amer Studies Offered Autumn and Spring. Survey course to acquaint the student with Native American Studies by a general overview of Indian history, culture, philosophy, religious beliefs and contemporary issues.	3 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits

	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
	WRIT 121 - Intro to Technical Writing Offered every term. Introduction to technical writing situations that integrate text, design, and graphics. Emphasis is on evidence-based, informative writing that uses design and graphics to visually represent logic and organization. Course focuses on writing as a process and includes student self-assessment. Major assignments include a pure technical document, exploration of credibility, and public science writing. Students are expected to write without major faults in grammar or usage and to have basic computer literacy.	3 Credits
Minimum Required Grade: C-		39 Total Credits Required

Upper Division Departmental Required Courses

Rule: All courses are required.

	Course	Credits
	HEE 301 - Meth of Secondary HE Offered spring. Application of educational theory in planning, analyzing, and presenting learning experiences to typical and atypical populations in secondary school physical education for students in grades 7-12. Active participation required.	3 Credits
	HEE 302 - Meth of Inst Strat in Elem PE Offered every term. Prereq. admission into Teacher Education Program in the College of Education and HEE 233. Application of educational theory in planning, analyzing, and presenting learning experiences to typical and atypical populations in elementary school physical education for children in grades K-6. Active participation required.	3 Credits
	HEE 340 - Methods of Health Education Offered autumn even-numbered years. Prereq., admission to the teacher education program. Focus on developing and implementing strategies to teach K-12 health education.	3 Credits

	HTH 465 - Leading Hlth, Hmn Perform Orgs Offered every term. Prereq., KIN 205 and junior standing. Leadership, management, organizational structure assertiveness, conflict management, public relations, decision-making, budget management, and a broad overview of human resource management, all as they relate to health and human performance settings.	3 Credits
	HTH 475E - Leg Eth Issues Hlth Ex Pro Prereq., upper-division or graduate status. Legal bases for litigation in the health and exercise professions, with emphasis on negligence, liability, and risk identification and risk management. Utilizing the Western ethical traditions, the ethics component examines moral/ethical development through the lifespan via analysis of specific human behaviors.	3 Credits
	KIN 320 - Exercise Physiology Offered every term. Prereq., BIOH 370 or BIOH 211N, KIN 201; coreq., KIN 321. Investigation of the physiological changes and the significance of these changes as they occur during physical work, activity and exercise. Focus on basic energy, musculosketal, nervous, cardiovascular and respiratory systems as they relate to aerobic and anaerobic exercise. Emphasis will be placed on the response of these systems to both acute exercise, and the adaptations to chronic exercise. Credit not allowed toward graduate degree in the exercise science option in Health and Human Performance.	3 Credits
	KIN 321 - Exercise Physiology Lab Offered autumn and spring. Prereq., BIOH 370 or BIOH 211N; coreq., KIN 320. Laboratory session examining the physiological effect of the physical work, activity and exercise on the functions of the human body. Credit not allowed toward graduate degree in the exercise science option in Health and Human Performance.	1 Credits
	KIN 322 - Kinesiology Offered autumn. Prereq., BIOH 211N or BIOH 370; coreq., KIN 323. Anatomy and kinesiology of the neuromusculoskeletal system and body cavities in relation to movement and function.	3 Credits
	KIN 323 - Anatomical Kinesiology Lab Offered autumn. Prereq., BIOH 211N or BIOH 370; coreq., KIN 322. Anatomy and kinesiology of the neuromusculoskeletal system and body cavities in relation to movement and function.	1 Credits
	KIN 330 - Motor Learning and Control Offered autumn and spring. Prereq., BIOH 201N or BIOH 365. Focused on developing an understanding of the anatomy and physiology within the nervous system necessary for movement. Establishes an understanding of the basic science involved in the control of motor tasks, and uses this foundation to evaluate case studies that will focus on sport performance, clinical deficits, age-related alterations, learning of motor tasks following injury, and other motor-related tasks.	3 Credits
Minimum Required Grade: C-		26 Total Credits Required

Outside Major Upper Division Required Courses

Rule: Complete the following course.

Note: Students may substitute BIOE 172 for ENST 472.

	Course	Credits
	ENST 472 - Gen Sci: Conserv Ed Offered autumn and spring. A study of the foundations of environmental science and conservation education with applications to community service and teaching.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Community Health and Prevention Sciences B.S.

Bachelor of Science - Health & Human Performance; Community Health & Prevent Sci Option

College of ED & Human Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 106
Required Cumulative GPA: 2.0

Lower Division Required Courses

Rule: All courses are required.

Note: Students should take ECP 120 and ECP 121 within two years of graduation in order to ensure current certification. Students may substitute outside Emergency Medical Responder Certification for these courses.

	Course	Credits
	ECP 120 - Emergency Medical Respondr Lec Offered every term. Coreq., ECP 121. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 121 provides certifications by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.	2 Credits
	ECP 121 - Emergency Medical Respondr Lab Offered every term. Coreq., ECP 120. Development of knowledge of emergency care and CPR/AED techniques. In conjunction with ECP 120 provides certification by the American Academy of Orthopedic Surgeons and the American Heart Association upon successful completion.	1 Credits
	HTH 110 - Personal Health and Wellness Offered autumn and spring. Focus on health principles and their relevance in contemporary society, the evaluation and application of scientific advances to hypothetical lifestyles, and on contemporary problems in life.	3 Credits
	KIN 201 - Basic Exercise Prescription Offered every term. Theory, principles, and practice of exercise prescription for aerobic and resistance exercise programs for health, fitness and performance. Students must register for the lecture and a linked lab.	3 Credits

	KIN 205 - Foundations of HHP Offered autumn and spring. An overview of the foundational principles comprising the field of HHP with special emphasis on the historical and philosophical foundations, and the evolution of the unity of mind/body concept. Includes an overview of program options, analysis of future directions, and career choices.	3 Credits
	NUTR 221N - Basic Human Nutrition Offered autumn and spring. The principles of science as applied to current concepts and controversies in the field of human nutrition.	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Outside Major Lower Division Required Courses

Rule: All courses are required.

Note: It is strongly recommended that students take either BIOH 112 OR BIOH 113 OR BIOB 160 as an elective course prior to taking Anatomy and Physiology. Students may take any other Statistics course pre-approved by their adviser in place of STAT 216 (PSYX 222, SOCI 202, WILD 240 or EDU 421). Students may substitute WRIT 201 for WRIT 121. Note: BIOH 201N and 202N are co-requisites completed for a total of 4 credits and BIOH 211N and 212N are co-requisites completed for a total of 4 credits.

	Course	Credits
	BIOH 201N - Human Anat Phys I (equiv 301) Offered autumn and spring. Prereq., introductory science course or college-prep high school biology course recommended. Comprehensive knowledge of human form and function necessary for students preparing for health-related professions. Emphasis on structure, function and homeostatic regulation of body systems with presentation of basic concepts in chemistry and microbiology as they relate to human anatomy and physiology. Covers tissues through nervous system. Required, integrated laboratory includes some dissection.	4 Credits
	BIOH 202N - Human Anat and Phys I Lab Offered autumn and spring. Coreq., BIOH 201. Basic knowledge necessary for students in health-related programs. Emphasis on normal anatomy and physiology with presentation of basic concepts in chemistry and microbiology as they relate to human anatomy and physiology. Covers tissues through nervous system. A cadaver lab is included.	4 Credits
	BIOH 211N - Human Anat Phys II (equiv 311) Offered autumn and spring. Prereq., and continuation of BIOH 201N. Comprehensive knowledge of human form and function necessary for students in health-related programs. Emphasis on structure function and homeostatic regulation of body systems with presentation of basic concepts in chemistry and microbiology as they relate to human anatomy and physiology. Covers endocrine through reproductive systems. Required integrated laboratory includes frequent dissection.	4 Credits
	BIOH 212N - Human Anat Phys II Lab Offered autumn and spring. Prereq., BIOH 201N. Coreq., BIOH 211. Continuation of 201N. Basic knowledge necessary for students in health-related programs. Emphasis on normal anatomy and physiology with presentation of basic concepts in chemistry and microbiology as they relate to human anatomy and physiology. Covers endocrine through reproductive systems. A cadaver lab is included.	4 Credits

	BIOM 250N - Microbiology for Hlth Sciences Offered spring. Infectious diseases, including concepts of virulence, resistance, prevention and control of microbial diseases in the individual and in the community. If laboratory experience is desired, the student may enroll concurrently in BIOM 251. Credit not allowed toward a major in microbiology.	3 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	ENST 225 - Community & Enviornment Offered autumn. Same as SOCI 225. Exploration of the ways that communities address their environmental concerns. Introduction of relevant social science concepts.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WGSS 263S - Women, Men, and Sexuality Offered autumn. Broad overview of gender and women's issues from a social science perspective. Relevant topics related to the sociological and psychological aspects of gender across culture are explored, including masculinity, femininity, violence, reproductive health, cultural diversity in the expression of gender, issues in sexual orientation, and media contributions to these issues.	3 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits

	WRIT 121 - Intro to Technical Writing Offered every term. Introduction to technical writing situations that integrate text, design, and graphics. Emphasis is on evidence-based, informative writing that uses design and graphics to visually represent logic and organization. Course focuses on writing as a process and includes student self-assessment. Major assignments include a pure technical document, exploration of credibility, and public science writing. Students are expected to write without major faults in grammar or usage and to have basic computer literacy.	3 Credits
Minimum Required Grade: C-		39 Total Credits Required

Upper Division Departmental Required Courses

Rule: All courses are required.

	Course	Credits
	CHTH 355 - Theory Pract Comm Hlth Ed Offered autumn. Prereq., KIN 205. History, philosophy, and theory related to community health education and health promotion. Includes the application of program development principles and health promotion strategies to community health programs.	3 Credits
	CHTH 445 - Prgrm Plan in Comm Health Offered spring. Prereq., CHTH 355. Overview of the issues, approaches, and techniques community health educators and professionals utilize in planning and implementing programs to assist communities in improving health status and reducing risky behaviors and their determinants. This course co-convenes with HHP 541.	3 Credits
	CHTH 485 - Theories of Hlth Behav and Cou Offered spring. Exploration of the helping role as it relates to health behavior, health assessment, problem-solving and referral skills. Application of theories to facilitation of healthy behavior changes.	3 Credits
	CHTH 498 - Internship (R-6) Offered every term. Prereq. all HHP options minimum junior standing and ECP 120/121 (or equivalent). Prereqs per option. Exercise Science Applied: KIN 320/321. If internship is coaching or strength & conditioning must also have completed KIN 410 and COA 405. Exercise Science Pre-Professional: KIN 320/321. If internship is cardiac rehab must also have completed KIN 460/483/484. Community Health: CHTH 355. Supervised field experiences with private businesses, public agencies, or institutions. 45 hours of internship site work = 1 credit. A maximum of 6 credits of Internship 498 may count toward graduation. Students should not be registered for more than 14 credits their internship semester.	2 To 6 Credits
	HTH 370 - Peer Health Education Offered spring. Introduction to peer health education strategies and techniques. Instruction in the areas of wellness, drug and alcohol abuse prevention, and sexual assault prevention. Students develop and implement a peer health program focused on prevention of major health problems among college students.	3 Credits

	HTH 395 - Peer Health Practicum (R-6) Offered autumn and spring. Prereq., HTH 370. Practical experience in planning, coordinating, and implementing health education activities for the campus community. Students address topics related to wellness, drug and alcohol prevention, or sexual assault awareness.	1 To 3 Credits
	HTH 430 - Hlth and Mind/Body/Spirit Offered autumn. Prereq., junior standing. Overview of how the mind/body/spirit relationship affects health. Examination of current research exploring how thoughts, emotions, attitudes, and beliefs influence and mediate health outcome. Exploration of the theoretical applications of mind/body/spirit in health and healing used in contemporary society.	3 Credits
	HTH 465 - Leading Hlth, Hmn Perform Orgs Offered every term. Prereq., KIN 205 and junior standing. Leadership, management, organizational structure assertiveness, conflict management, public relations, decision-making, budget management, and a broad overview of human resource management, all as they relate to health and human performance settings.	3 Credits
	HTH 475E - Leg Eth Issues Hlth Ex Pro Prereq., upper-division or graduate status. Legal bases for litigation in the health and exercise professions, with emphasis on negligence, liability, and risk identification and risk management. Utilizing the Western ethical traditions, the ethics component examines moral/ethical development through the lifespan via analysis of specific human behaviors.	3 Credits
	KIN 447 - Analytical & Comm Techniques Offered every term. Prereq., WRIT 101, WRIT 121 or WRIT 201. Analysis and communicative critique of literature, cinema, and other forms of popular media that contain allegorical life themes. Substantial reading, speaking and writing component. Emphasis on improving and maintaining communication skills.	3 Credits
Minimum Required Grade: C-		28-33 Total Credits Required

Outside Major Upper Division Required Courses

Rule: All courses are required.

	Course	Credits
	ANTY 426 - Culture, Health and Healing Offered autumn. Cross-cultural comparisons of theories and concepts and health and illness. Examination of the impact of these concepts upon health practices and treatment of disease around the world.	3 Credits

	S W 423 - Addiction Studies Offered spring. Same as PSYX 441 and SOCI 433. Examination of chemical dependency and behavioral compulsions, including alcohol and other drugs, gambling, eating disorders, sexual addictions. Ecosystems perspective on etiology, treatment, prevention, family dynamics, community response, and societal contributors. Students engage in a service learning community project which is integrated into the classroom through initial training, regular reflection, and other activities.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Elective Courses

Rule: Elective courses require adviser pre-approval.

Note: Electives require adviser consent. Students should take an appropriate number of Upper Division Electives to achieve 39 Upper Division Credits, per UM graduation requirements.

Minimum Required Grade: C-

18-24 Total Credits Required

Counselor Education Department

John Sommers-Flanagan and Kirsten Murray, Co-Chair

The Counselor Education program educates students for employment in school (K-12 and higher education) and community mental health and human service settings. Counselors are practitioners, consultants, and coordinators who assist in problem solving, decision-making skills, personal growth and development, and individual, family school, and/or career issues. Counselors receive training in the eight core areas identified by the American Counseling Association Council for Accreditation of Counseling and Related Educational Programs: human growth and development, social and cultural foundations, the helping relationship, group theories and methods, career and lifestyle development, client assessment and evaluation, research and program evaluation, and professional orientation. We offer a School Counseling M.A., a Mental Health Counseling M.A., and an Interdisciplinary M.A. Each option requires additional specialty courses and comprehensive written and oral examinations focused on the student's career track. The more advanced graduate degrees (Ed.S. and Ed.D.) develop depth, supervisory, and leadership skills in these areas.

The Department of Counselor Education is also the academic home for an interdisciplinary masters degree in Global Youth Development. Students in this program are prepared for humanitarian and advocacy work, focusing specifically on youth and family development across cultures. Requirements include one year of campus-based course work and an approved internship of at least two semesters duration working with youth and family concerns. GYD is a Peace Corps Master's International program, and the expectation therefore is that students will complete the Internship requirement by serving as U.S. Peace Corps Volunteers abroad. For further information and course listings, see: http://coehs.umt.edu/departments/counsed/IYFD/default.php

Graduate Programs: The M.A., Ed.S., and Ed.D. are offered in Counselor Education. An interdisciplinary M.A. is offered in Global Youth Development. Information regarding specific requirements and program options is available from the Phyllis J. Washington College of Education and Human Sciences. For more information, please refer to the University of Montana Graduate Programs and Admissions Catalog. Graduate programs are accredited by NCATE and CACREP.

Admission to Counseling: Applicants for this program should contact the Department for more specific admissions information. Requirements include official transcripts from all undergraduate and graduate institutions attended; three current letters of recommendation; and a letter of application stating academic and professional background, purpose in obtaining the degree, and thoughts about eventual employment and career direction. Applicants have the option to include GRE scores. Priority deadline is February 15th with complete applications reviewed after this date on a space available basis. Admission is competitive.

Certification Requirements: The Counselor Education, M.A., School Counseling option, leads to licensure at the Class IV level.

- COUN 242S - Intimate Relationships
  Credits: 3. Offered autumn and spring semester. This course covers the fascinating, multi-faceted world of intimate relationships and explores the topic from empirical and theoretical perspectives. The examination of intimate relationships in this course will look at the subject through cultural, biological, social and developmental lenses and will explore specific topics such as attraction, communication, friendship, sexuality, love, conflict, power and violence, loss, social cognition, and repairing relationships. Course Attributes: Social Sciences Course (S)
- COUN 395 - Special Topics
  Credits: 1 TO 9. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.
- COUN 475 - Forgiveness & Reconcilia
  Credits: 3. Offered spring. Survey of the theory and practice of healing fractured relationships at the individual and community levels, treating historical and personal issues from philosophical, psychological and religious perspectives drawn from several diverse cultures.
- COUN 485 - Counseling Theories
  Credits: 3. Offered autumn. Prereq., PSYX 100S. Same as PSYX 442 and SW 485. Introduction to the primary theories that constitute the intellectual foundation for common counseling and psychotherapy techniques, with a special focus on gender, interpersonal influence strategies, and diversity issues.
- COUN 495 - Special Topics
  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.
- COUN 510 - Intro to Counseling
  Credits: 1. Course is designed to prepare school and mental health counselors-in-training gain an understanding of the counseling field and begin developing professional identity. Much of the material introduced in this course will be developed in greater detail in later courses. This course is an overview that prepares the student for his or her professional identity and activities. Level: Graduate
- COUN 511 - Theories & Tech of Counseling
  Credits: 3. Offered autumn. Examination of historic and current theories of counseling. Overview of techniques associated with each theory. Basic introduction to ethical concerns with each theory. Level: Graduate
- COUN 512 - Counseling Fundamentals
  Credits: 3. Offered autumn. Prereq., COUN 511. Overview of approaches to counseling, including common factors. Includes meta-theoretical considerations and guided dyadic practice. Level: Graduate
- COUN 520 - Group Coun & Guidance

Credits: 3. Offered spring. Prereq., COUN 511. Theories, approaches, and methods for group counseling and guidance. Level: Graduate

- COUN 530 - Applied Counseling Skills

  Credits: 3. Offered autumn and spring. Prereq., COUN 511, 512 and consent of instr. Review and application of counseling theories and techniques to client issues. Intensive supervision including ethics, professional practice and diagnostic considerations. Lecture and class presentation with a focus on professional counseling development. Level: Graduate

- COUN 540 - Individual Appraisal

  Credits: 3. Offered spring. Prereq., C&I 517 or consent of instr. Overview of appraisal techniques utilized in counseling, including interviewing, observation, and psychological/educational testing. The processes of selection, administration, scoring, interpretation, and reporting information from appraisal techniques are examined in relation to practical, legal, and ethical considerations. Level: Graduate

- COUN 550 - Intro Family Counseling

  Credits: 3. Offered summer only. Prereq., admission to Counselor Education program or consent of instr. An introduction to the major theories, techniques, and diagnostic tools of family counseling. Course includes a family systems emphasis. Level: Graduate

- COUN 560 - Lifespan Developmentl Coun

  Credits: 3. Offered spring. Overview of counseling from the framework of lifespan developmental theory. Normal and abnormal development in the environmental context of family, school, society and culture emphasized. Level: Graduate

- COUN 565 - Coun, Prog Dev, & Superv

  Credits: 3. Offered spring. Prereq., graduate standing or consent of instr. Examination of counseling techniques and approaches relevant to prevention and remediation of behavioral, social, emotional and academic problems for students P-12. Overview of school counseling program development and administration. Level: Graduate

- COUN 566 - Coun Child & Adol

  Credits: 3. Offered every spring. Prereq., COUN 511, 512, 565 or consent of instr. Review and application of counseling concerns and approaches with children and adolescents in school and related educational settings, including classroom and psychoeducational strategies. Level: Graduate

- COUN 570 - Career Coun Theory & Tech

  Credits: 3. Offered summer only. Examination of theories of career choice and development; information sources for career counseling; techniques and approaches of career counseling with clients at different stages of career and life development and from diverse populations. Level: Graduate

- COUN 575 - Multicultural Coun

  Credits: 3. Offered spring. Prereq., graduate standing or consent of instr. An introduction to the field of multicultural counseling. Issues and practical considerations in counseling five population groups; definition of terms and concepts. Level: Graduate

- COUN 580 - Addictions Counseling

  Credits: 3. Offered summer. Pre-req., admission to the Counselor Education program or consent of instr. Understanding of addictions with a focus on chemical dependency and its treatment including community and school-based prevention. Course includes Motivational Interviewing approach. Level: Graduate

- COUN 585 - Coun Meth: School & Agency

  Credits: 1 TO 9. Offered every term. Prereq., COUN 511, 512. Supervised counseling methods and theories as applied in mental health agencies and schools. Review of the principles of counseling as these apply to various settings and client issues. Level: Graduate

- COUN 589 - Comprehensive Project

  Credits: 1. Offered autumn and spring. Integration of professional experience and academic research in a comprehensive paper or applied project. Students may elect to have an oral examination covering the eight CACREP core areas of counseling. Level: Graduate

- COUN 594 - Seminar

Credits: 1 TO 9. (R-9) Offered intermittently. Prereq., consent of instr. Group analysis of problems in specific areas of professional counseling. Level: Graduate

- COUN 595 - Special Topics
  Credits: 1 TO 9. (R-9) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate
- COUN 596 - Independent Study
  Credits: 1 TO 6. (R-6) Offered intermittently. Prereq., consent of instr. Course material appropriate to the needs and objectives of the individual student. Level: Graduate
- COUN 597 - Research
  Credits: 1 TO 9. (R-9) Offered autumn and spring. Prereq., consent of instr. Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate
- COUN 610 - Profess Ethics/Orient
  Credits: 3. Offered spring. Prereq., COUN 530 or consent of instr. The public and institutional roles and responsibilities of counseling professionals including ethical and legal responsibilities. Level: Graduate
- COUN 615 - Diag/Treat Plan in Coun
  Credits: 3. Offered spring. Prereq., COUN 512. Overview of diagnosis, treatment planning and case documentation in counseling. Level: Graduate
- COUN 625 - Intro Mental Health Systems
  Credits: 3. Prereq., acceptance into Counselor Education program mental health track. Essential knowledge for professional identity, understanding of public policy, and community assessment procedures. Includes brief lectures, guest speakers, discussion, and student presentations. Level: Graduate
- COUN 630 - Doctoral Clinical Practice
  Credits: 3. Doctoral level clinical experience of 100 supervised hours focusing on the counseling relationship, including case conceptualization and therapeutic skills from a variety of theoretical perspectives. Additional areas of focus are ethical considerations and the assessment of professional counseling outcomes. Level: Graduate
- COUN 640 - Professional Leadership and Scholarly Development
  Credits: 3. Theories of academic leadership, within professional trends, political and social contexts. Includes developing awareness of scholarly opportunities, including preparation of a professional counseling organization conference proposal. Level: Graduate
- COUN 650 - Pedagogy and the Professorate
  Credits: 3. Consideration of pedagogy including teaching, learning, governance, curriculum development, assessment and evaluation. Includes knowledge of accreditation processes, personal and professional challenges of faculty life and exploration of doctoral level career paths. Level: Graduate
- COUN 670 - Doc Comprehensive Exam
  Credits: 2. Students will successfully complete four doctoral Comprehensive Examination Essays read by all members of the student's Doctoral Comps Committee. At least one of the essays is to be submitted for publication. Level: Graduate
- COUN 685 - Methods Counselor Education
  Credits: 1 TO 9. (R-9) Supervised advanced counselor education methods and approaches that address the professional leadership roles of counselor education, including realms of teaching and advising, clinical supervision, scholarly work and professional counseling practice. Level: Graduate
- COUN 699 - Thesis/Profess Paper
  Credits: 2 TO 10. (R-10) Offered intermittently. Prereq., EDLD 620 or 625. Preparation of a thesis, professional paper, or manuscript based on research for presentation and/or publication. Level: Graduate

Educational Leadership Department

John Matt, Chairman, Educational Leadership

The **Educational Leadership** knowledge base emphasizes the realities of the workplace, blending practical tasks with the conceptual models of effective leadership. The model uses leadership assessment and problem-based learning throughout nine curricular strands: change/future, leadership, research community, communication, assessment/program evaluation, management, diversity, curriculum, and professionalism/socialization. Students at both degree levels experience integrated coursework, performance-based assessment, and exit interviews on completion of the degree programs.

Programs: The M.Ed., Ed.S., Administrative Licensure, and Ed.D. are offered in education administration and supervision. Information regarding specific requirements and program options is available from the Phyllis J. Washington College of Education and Human Sciences. For more information, please refer to the University of Montana Graduate Programs and Admissions Catalog. Graduate programs are accredited by The National Council for Accreditation of Teacher Education (NCATE) and The Montana Board of Public Education (BPE).

Admission to Educational Leadership: The Program Admissions Committee has established policies and standards for admission which include the GRE (verbal and quantitative); three letters of recommendation (one from an immediate supervisor); official transcripts for all undergraduate and graduate coursework; qualifying examination; and interviews (doctoral). Contact the Department for details.

Certification Requirements: Education Leadership degree and administrative licensure programs lead to Montana Class 3 Administrative Licensure with either a K-12 Principal or Superintendent endorsement. Please note that in addition to the coursework and degree requirements, the State of Montana also requires licensed teaching, school counseling, or administrative experience for the Class 3 license.

Courses (Check master schedule for availability of all courses)

R- before the course description indicates the course may be repeated for credit to the maximum indicated after the R. Credits beyond this maximum do not count toward a degree.

- EDLD 295 - Special Topics in Ed Amin
  Credits: 1 TO 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors.Offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.
- EDLD 495 - Special Topics
  Credits: 1 TO 9. (R-9) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.
- EDLD 502 - Philosophy of Education
  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Same as C&I 502. Major philosophical schools of thought and leading proponents of each. Concepts of society, the educative process, and the role of education. Level: Graduate
- EDLD 512 - Educational Futures
  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Predicting and projecting the near and more distant future of education. The

changing place and nature of education and leadership in tomorrow's society. Level: Graduate

- EDLD 519 - Analysis of Ed Data

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Explanation and practice in measurement and statistical analysis of educational data. Preparation in measurement and statistical analysis for educational research. Level: Graduate

- EDLD 520 - Educational Research

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Same as C&I and HHP 520. An understanding of basic quantitative and qualitative research methodology and terminology, particularly as they are used in studies presented in the professional literature. Level: Graduate

- EDLD 540 - Higher Education Finance

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Overview of how colleges and universities make financial and budgetary decisions; current trends in state and federal policy related to finance; contemporary problems in finance of education. Level: Graduate

- EDLD 542 - The College Student

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Survey of today’s college student including discussion of demographics, student development theories, learning theories, and contemporary issues on college campuses related to college students. Level: Graduate

- EDLD 544 - The College Curriculum

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Historical and contemporary development of college and university curriculum. Includes overview of pedagogical strategies, assessment, evaluation, and curricular change. Level: Graduate

- EDLD 546 - Fed & State Higher Ed Pol

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Overview of policies at the local, state, and national levels that affect the conduct of higher education; current trends in higher education policy; changes in educational policy; how policies affect different institutional types. Level: Graduate

- EDLD 550 - Found Educational Leadersh

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Basic functions of K-12 administration and supervision and how contemporary views have evolved; models of leadership style and practice compared; responsibilities and relationships of school boards and chief school officers. Level: Graduate

- EDLD 551 - Found Curric Leadership

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. The history and theoretical bases of current K-12 curriculum and instructional leadership. Level: Graduate

- EDLD 552 - Sup Eval Pub Sch Educators

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Conflicting views and models of supervision; supervision in relation to administration and evaluation. Development of instruments for the formative and summative evaluation of teaching and their use in simulated cases. Level: Graduate

- EDLD 554 - School Law

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Key Montana and national legislation regarding public education. Landmark cases of the U.S. Supreme Court and other federal, regional, and state courts as they affect the operation of public schools and the rights of school board members, administrators, teachers, students, and parents. Level: Graduate

- EDLD 556 - Finance of Publ Education

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Revenue sources for K-12 public schools; proper expenditures; Montana's foundation program and related legislation; major court cases and how they have affected ways of funding schools; developing effective school and district budgets. Level: Graduate

- EDLD 559 - School Pub Rel-Prins

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Investigation of the appropriate leadership and management roles of the modern school principal as they relate to public relations. Understanding of political theory as it relates to developing and maintaining relationships with internal and external publics. Level: Graduate

- EDLD 567 - K-12 Leadership

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Examination of the roles responsibilities, and relationships of educators relative to management and leadership considerations at all levels of the educational organization (elementary, middle, secondary, and central office). Level: Graduate

- EDLD 568 - K-12 Curriculum

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Major aspects of curriculum related to the duties and responsibilities of school administrators. Issues related to the development, review and evaluation o curriculum. Exploration of issues related to selected instructional models and practices; school improvement. Level: Graduate

- EDLD 583 - Strategic Plng For Tech

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Same as C&I 583. Leadership and strategic planning processes for technology integration within schools. Level: Graduate

- EDLD 585 - Fieldwork Ed Admin & Super

  Credits: 2 TO 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Fieldwork at the school level (when the student is not completing an internship), with the cooperation of the principal and under the guidance of a University of Montana professor. Level: Graduate

- EDLD 594 - Seminar

  Credits: 1 TO 9. (R-9) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Group analysis of problems in specific areas of education. Level: Graduate

- EDLD 595 - Special Topics

  Credits: 1 TO 9. (R-9) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate

- EDLD 596 - Independent Study

  Credits: 1 TO 6. (R-9) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Consent of instructor. Course material appropriate to the needs and objectives of the individual student. Level: Graduate

- EDLD 597 - Research

  Credits: 1 TO 9. (R-10) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Consent of instructor. Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate

- EDLD 598 - Internship

  Credits: 1 TO 12. (R-10) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Consent of instructor. Extended classroom experience which provides practical application of classroom learning during placements off campus. Level: Graduate

- EDLD 599 - Professional Paper

  Credits: 1 TO 9. (R-9) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Consent of instructor. Preparation of a professional paper appropriate to the needs and objectives of the individual student. Level: Graduate

- EDLD 618 - Educational Statistics

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Same as C&I 618. Advanced statistical methods and use of the mainframe computer and microcomputer for data analysis. Use of a recognized statistical package for research applications. Level: Graduate

- EDLD 620 - Qualitative Research

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Same as C&I 620. In-depth review of qualitative research methods, designs, and approaches. The development of a research proposal. Level: Graduate

- EDLD 625 - Quantitative Research

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Same as C&I 625. Principles and technique of quantitative research in educational settings. Students prepare a draft of a research proposal and experience an abbreviated dissertation proposal defense. Level: Graduate

- EDLD 653 - School Personnel Admin

  Credits: 3. Prepreq., consent of instructor required. Administration of classified and certificated school employees; personnel-related laws, functions, and decisions; unions, bargaining contracts, grievances, etc. Level: Graduate

- EDLD 656 - The Economics of Education

  Credits: 3. Prepreq., consent of instructor required. School finance from a national perspective; alternative budgeting and school-revenue models; equity considerations. Level: Graduate

- EDLD 657 - Facil Plng/Schl Bus Func

  Credits: 3. Prepreq., consent of instructor required. Working with architects, school personnel, and others on educationally and financially sound plans for new and remodeled facilities; the school business official's responsibilities regarding buildings and grounds, maintenance and custodial services, transportation, food services, and the administration of classified personnel. Level: Graduate

- EDLD 658 - School Pub Rel-Supts

  Credits: 3. Prepreq., consent of instructor required. Enhancing site- and district-level internal and external relations; conducting needs assessments, inservice workshops, and funding campaigns; improving administrators' writing, listening, and speaking skills; composing press releases and newsletters; working with the media. Level: Graduate

- EDLD 660 - Adult Continuing Education

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Adult learning theory and the special needs and motivations of adult learners in postsecondary institutions; principles and practices of administering postsecondary continuing education programs. Level: Graduate

- EDLD 662 - History of Higher Educ

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Survey of the historical roots of higher education from world and comparative perspectives; examination of the historic and contemporary missions, organizational structures, governance, and administration of various types of postsecondary and higher education institutions in America and abroad. Level: Graduate

- EDLD 664 - The Community College

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. The organization and administration of American postsecondary education in two-year collegiate institutions; current trends in governance, finance, curriculum, faculty and students. Level: Graduate

- EDLD 667 - American College Professor

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Investigation of the prevailing curriculum and instruction in American undergraduate and graduate education and consideration of reform reports. Level: Graduate

- EDLD 668 - College & University Admin

  Credits: 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Administration of college and university programs, departments, and schools; the roles of program director or coordinator, department chairperson, dean, vice president, provost, president, chancellor, and commissioner. Level: Graduate

- EDLD 670 - Best Practices in IPL

  Credits: 3. Students explore the field of International Programs at the college or university level and seek current best practices. This course is designed to give students an understanding of the

leadership and management activities required of leaders in the field of international programs. Level: Graduate

- EDLD 672 - Itnl Prog Dev

  Credits: 3. This course prepares professionals with the knowledge and practical skills needed to develop programs, seek external funding, and write proposals to support student and professional exchanges, study abroad, ESL and intensive language programs, internships, student services, partnership agreements, and other education and training activities in the international field. Level: Graduate

- EDLD 673 - Lead./Cultures

  Credits: 3. The course introduces a methodology to support the emerging field of international and comparative educational leadership and management and is instrumental for students of educational leadership and management. Level: Graduate

- EDLD 674 - Internship in College Tchg

  Credits: 1 TO 3. Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Provides an opportunity for guided and supervised teaching at the college level and assistance to the aspiring college teacher in meeting the needs of a diverse student population; assistance provided in methods of teaching at the college level, theories of learning, use of technology, and evaluation and assessment techniques. Level: Graduate

- EDLD 676 - Internship Higher Ed Admin

  Credits: 1 TO 3. (R-6) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Supervised and guided work in an administrative unit/department at the college/university level. Level: Graduate

- EDLD 677 - Globalization in Education

  Credits: 3. Course explores globalization of education from the perspective of International Programs at the post-secondary level. This course is designed to prepare students for leadership positions in the field of International Programs and other related fields. Level: Graduate

- EDLD 678 - Cultural Proficiency

  Credits: 3. Course explores the area of cultural proficiency through a variety of lenses. Students use interviews and self-reflection to develop a framework for understanding cultural issues and ethical approaches cultural issues. Level: Graduate

- EDLD 679 - Linguistic Diversity

  Credits: 3. Course explores policy issues related to linguistic diversity. This course is designed to help students develop a framework of global issues as they relate to, and are impacted by, linguistic diversity. Level: Graduate

- EDLD 680 - Pol./Int.l Ed.

  Credits: 3. Course explores political issues related to International Programs. This course is designed to prepare students for the dynamic nature of political arena surrounding the development and implementation of postsecondary International Programs. Level: Graduate

- EDLD 681 - Comp. Int.l Ed.

  Credits: 3. Course explores the field of international programs at the college or university level through a study of comparative education. This course is designed to familiarize students with the similarities and differences between educational systems across the globe. Level: Graduate

- EDLD 682 - Cross-Cultural Competence

  Credits: 3. Blending both the practical and theoretical, this course offers you the requisite knowledge, the appropriate motivations, and the relevant skills to function competently with culturally-different others. Level: Graduate

- EDLD 683 - Int.l Persp.

  Credits: 3. This course primarily focuses on international students sharing their perspectives (including international academics and experienced practitioners). Topics include adaptation challenges, and the role that international students and faculty play in broader internationalization and diversity agendas within US higher education. Level: Graduate

- EDLD 694 - Adv Sem: Ed Admin/Superv

  Credits: 1 TO 9. (R-9) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. A review and discussion of current research. Topics vary. Level: Graduate

- EDLD 697 - Adv Research Ed Ad Super

  Credits: 1 TO 9. (R-9) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. Directed individual research and study appropriate to the back ground and objectives of the student. Level: Graduate

- EDLD 699 - Prof Sem/Dissertation

  Credits: 1 TO 12. (R-12) Open to graduate level students in Education Leadership, Counseling or Curriculum and Instruction majors. A review and discussion of current research. Topics vary. Level: Graduate

Global Youth Development Department

Lindsey Nichols, Assistant Professor of Counselor Education, Director

Housed in the Department of Counselor Education, this interdisciplinary master's degree program is designed for students who wish to engage in culturally-relevant volunteer work or paid employment in the realm of child and family assistance. It is affiliated with the United States Peace Corps as a partner school for their master's international program. Requirements include one year of full-time instruction at UM, a significant period of time engaging in internship work in an applied intercultural setting, and a final professional paper or thesis. Internships will typically be 1-2 years and will involve work in a culture other than one's own. Students participating in this program are expected to gain the following background and competencies:

- important interculturally-informed helping skills for working with youth, women, families and communities in culture other than their own
- a solid background in issues, concerns, and critiques regarding assistance and interventions across culture, both historically and currently
- the opportunity to pursue and participate in a significant field experience, working with an established helping agency in another culture or country

Back to Top

- GYD 495 - Special Topics

  Credits: 1 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics.

- GYD 501 - Intercultural Dev't -I

  Credits: 3. Offered autumn. Explorations of child rearing practices, parenting beliefs, and cultural variations in infancy and early child development. Level: Graduate

- GYD 502 - Intercultural Dev't -II

  Credits: 3. Offered spring. Explorations of cultural variations in later childhood, adolescence and adulthood, with particular focus on issues such as multicultural adoption, identity, and the role of poverty. Level: Graduate

- GYD 510 - Intercultural Skills

  Credits: 3. Offered autumn. Focus on applied skills in two areas: crosscultural negotiation and conflict management; program development and grant writing. Level: Graduate

- GYD 520 - Critical Issues

  Credits: 3. Exploration of psychological, political, spiritual, ethical, and practical dimensions of offering assistance cross-culturally. This course includes discussion of ethical and personal issues related to intercultural work, gender and development, trauma, program evaluation, etc. Level: Graduate

- GYD 595 - Special Topics

  Credits: 2 TO 6. (R-6) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate

- GYD 596 - Independent Study

  Credits: 1 TO 6. (R-6) Offered every term. Directed readings and other individualized study topics guided by faculty. Level: Graduate

- GYD 598 - Internship

Credits: 1 TO 6. (R-6) Offered every term. Introduction to service learning in applied settings, usually local. Level: Graduate

- GYD 599 - Professional Projects
  Credits: 1 TO 2. (R-2) Offered every term. Final Master's project related to internship; may be presented as a grant proposal, policy analysis, or portfolio. Level: Graduate
- GYD 695 - Special Topics
  Credits: 1 TO 4. (R-4) Offered intermittently. Experimental offerings of visiting professors, experimental offerings of new courses, or one-time offerings of current topics. Level: Graduate
- GYD 698 - Intercultural Internship
  Credits: 1 TO 4. (R-4) Offered every term. Supervised intercultural experience through Peace Corps, VISTA, or other organization approved by program faculty. Level: Graduate
- GYD 699 - Thesis
  Credits: 1 TO 2. (R-2) Offered every term. Final master's thesis based on research related to internship placement. Level: Graduate

Human and Family Development Minor

Minor - Human and Family Development (Minor)

College Humanities & Sciences

Catalog Year: 2016-2017

Degree Specific Credits: 24

Required Cumulative GPA: 2.5

Note: To earn a minor the student must complete 24 credits, with 11 at the 300 level or above. All students are required to take a 12-credit core curriculum and, with the help of a faculty advisor, to develop a written statement of goals and interests along with a planned curriculum that includes 12 additional credits of electives consistent with the stated goals and interests. At least 6 credits of electives must be outside of the student's major.

Core Courses

Rule: Must complete the following subcategories

12 Total Credits Required

Subcategory 1

Rule: Must complete 1 of the following courses

	Course	Credits
	PSYX 230 - Developmental Psychology Offered autumn, spring, summer. Prereq., PSYX 100S. The study of human physical, cognitive and psychosocial development throughout the life span. Content covers major theories, the influence of genetics, and the environment from a chronological aspect. Appropriate for Social Work, Nursing, Addiction Studies, Education, and Psychology.	3 Credits
	PSYX 233 - Fund of Psychology of Aging Offered every term. An overview of theories and research findings in the psychology of adulthood and aging.	3 Credits

Minimum Required Grade: C	3 Total Credits Required

Subcategory 2

Rule: Must complete all of the following courses:

Note: HFD 494 may be taken for 1 credit. HFD 498 must be taken for a minimum of 2 credits. Education majors may take EDEC 396 to fulfill this requirement.

	Course	Credits
	HFD 494 - Seminar in Human Development (R-3) Offered autumn. Discussion of selected problems in human development. Emphasis on integrating theory and practice.	1 To 3 Credits
	HFD 498 - Internship (R-4) Prereq., consent of chair. Extended classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 4 Credits
Minimum Required Grade: C		3 Total Credits Required

Subcategory 3

Rule: Must complete 1 of the following courses

	Course	Credits
	COMX 311 - Family Communication Offered yearly. An examination of communication in marriage/romantic partnership, parent-child, and extended family relationships. Topics include intimacy, power, decision-making, problem solving, identity formation, and interpersonal perception.	3 Credits
	SOCI 332 - Sociology of the Family Offered autumn. Prereq., SOCI 101S. Historical, cross-cultural, and analytical study of the family. Emphasis on ideology, social structures, and agency affecting family composition and roles.	3 Credits
Minimum Required Grade: C		3 Total Credits Required

Subcategory 4

Rule: Must complete 1 of the following courses

	Course	Credits

	C&I 520 - Educational Research Offered every term. Same as EDLD 520. Open to graduate level students in Education Leadership, Counseling, or Curriculum and Instruction majors. An understanding of basic quantitative and qualitative research methodology and terminology, particularly as they are used in studies presented in the professional literature. Level: Graduate	3 Credits
	COMX 460 - Research Methods Offered autumn and spring. Open only to majors in COMM. Prereq., Grade of C- or better in EDLD 486 or PSYX 222 or SOCI 202 or STAT 216. Introduction to the major types of communication research and the foundations of quantitative research methods.	3 Credits
	PSYX 120 - Research Methods I Offered every term. Prereq., PSYX 100S. Experimental and other quantitative methods employed in the scientific study of behavior.	3 Credits
	PSYX 320 - Research Methods III Offered every term. Prereq., PSYX 222. An appreciation of the experimental approach to the scientific study of behavior through student-conducted experiments.	3 Credits
	S W 400 - Social Work Research Offered autumn and spring. Prereq., SW 360; Social Work major. Utilization of social research findings in social work practice. Techniques for the collection and analysis of clinical data. Special emphasis on research methodology for the assessment of practitioner and program effectiveness.	3 Credits
	SOCI 318 - Sociological Research Methods Offered every term. Prereq., SOCI 101S, Sociology majors only, or consent of instr. Methods of research in the social sciences including naturalistic observation, interviewing, measurement, experiments, surveys, content analysis, and basic data analysis. Required of all majors.	3 Credits
Minimum Required Grade: C		3 Total Credits Required

Elective Courses

Rule: Must complete 12 credits from any of the courses listed in the subcategories below; at least 6 credits must be taken outside of the student's major

Note: The list of electives is categorized to assist the student wishing to focus on one of these areas. Students may plan curricula which do not correspond to these categories, but should choose among courses from this list. Occasionally "special topics" courses are offered. Students may use these as electives with the consent of their advisors.
Check with departments regarding variable-credit 395 and 495-Special Topics listings.

12 Total Credits Required

Early Childhood

Rule: May complete any of the following courses

Note: Must complete all course work prior to taking HFD 498

	Course	**Credits**

	C&I 421 - Issues in Early Intervention Offered autumn odd-numbered years. Issues involved when serving young children with disabilities; family and child advocacy; least restrictive placements in early childhood settings; transitions concerning families, special education service providers and receiving schools; ;case management in rural communities; transdisciplinary teaming process; and preschool individualized education programs. Includes practicum hours in campus-based CO-TEACH preschool.	3 Credits
	CSD 210 - Speech & Lang Devel Offered autumn. Sophomore standing or greater. Topics include typical speech and language development, phonology, semantic, morphological, syntax, and pragmatics, along with individual differences, second language acquisition and literacy.	3 Credits
	EDEC 310 - Child in the Family Offered spring even-numbered years. Prereq., PSYX 100S. Physical, social, emotional and intellectual development, learning theories and child rearing practices related to children 0-6 years of age.	3 Credits
	EDEC 330 - Early Childhood Education Offered spring odd-numbered years. Theory and techniques of teaching in pre-school and primary levels of education. Observation and participation in pre-school programs. Recommended for kindergarten and primary teachers.	3 Credits
	EDEC 396 - EC Fieldwork/Practicum Offered autumn and spring. Practicum experiences including observational assessment of children, study of the planning process, team teaching of a one week unit plan, and planning and directing parent/teacher conferences. Students will complete selected readings and assignments on child development, early childhood ecological arrangements, and classroom management. Weekly seminars include early childhood pedagogy, adapted and regular physical education. Must attend mandatory meeting at 12:00 or 4:00 p.m. on first day of the semester.	3 Credits
	EDSP 403 - Curric/Mthds Early Spec Educ Offered autumn even-numbered years. Principles in selecting and adapting early childhood curriculum materials for young children with disabilities; development, implementation and evaluation of individualized education programs; and appropriate teaching strategies for the early childhood special education classroom. Includes a practicum.	3 Credits
	EDSP 462 - Spec Ed Law, Policy, Practice Offered autumn and even-numbered summers. Historic and current perspectives on laws, policies and practices of the special education and related fields. Coverage of all aspects of the special education process including collaborative practices.	3 Credits

	EDU 345 - Excptnlty & Clsrm Mgmt Offered autumn and spring. Prereq., Admission to the Teacher Education Program in secondary and K-12. Focus on classroom management and the characteristics and instructional adaptations for exceptional students in the regular classroom. Addresses the Individuals with Disabilities Education Act and subsequent reauthorizations, presents practices for working with students who are at-risk and students with disabilities in inclusive settings, and includes technological considerations.	3 Credits
	EDU 491 - Special Topics/Exp Courses (R-6) Offered intermittently. Special courses experimental in nature dealing with a relatively narrow, specialized topic of particular current interest. Credit not allowed toward a graduate degree.	1 To 6 Credits
	EDU 494 - Seminar:Refl Pract & App Rsrch (R-9) Required seminar during student teaching. Prereq., admission to the Teacher Education Program. Focuses on learning to conduct research on P-12 student performance to determine teaching effectiveness. Includes on-campus and/or on-line planning, conducting, and analyzing classroom practice.	1 To 9 Credits
	HFD 498 - Internship (R-4) Prereq., consent of chair. Extended classroom experience which provides practical application of classroom learning during placements off campus. Prior approval must be obtained from the faculty supervisor and the Internship Services office. A maximum of 6 credits of Internship (198, 298, 398, 498) may count toward graduation.	1 To 4 Credits
	PSYX 290 - Supervised Research (R-6) Offered every term. Prereq., consent of instr.	1 To 6 Credits
	PSYX 378 - Intro to Clinical Psyc Offered intermittently. Prereq., PSYX 340. Clinical psychology as a science and a profession. Theoretical models and techniques of assessment and intervention. Case illustrations.	3 Credits
Minimum Required Grade: C		0-12 Total Credits Required

School-Age

Rule: May complete any of the following courses

	Course	Credits
	EDU 221 - Ed Psych & Measuremnt Offered autumn and spring. Prereq., admission to Teacher Education program in secondary and K-12. Analysis of fundamental psychological concepts underlying classroom teaching and management, learning and evaluation including educational measurement. Emphasis on cognition, developmental, and motivational aspects of learning.	3 Credits

	EDU 345 - Excptnlty & Clsrm Mgmt Offered autumn and spring. Prereq., Admission to the Teacher Education Program in secondary and K-12. Focus on classroom management and the characteristics and instructional adaptations for exceptional students in the regular classroom. Addresses the Individuals with Disabilities Education Act and subsequent reauthorizations, presents practices for working with students who are at-risk and students with disabilities in inclusive settings, and includes technological considerations.	3 Credits
	PHAR 110N - Use & Abuse of Drugs Offered autumn and spring. Drug dependence and abuse.	3 Credits
	PSYX 339 - Curr Tpcs/Development Psyc Offered intermittently. Prereq., PSYC 240S or 245. Topical reviews of theories, research and applications in developmental psychology.	3 Credits
	PSYX 376 - Prin Cognit Behav Mod Offered intermittently. Prereq., PSYX 270S. Study of basic principles, assumptions, methodology and applications of behavior modification. Discussion of current literature relevant to behavioral assessment and treatment of major psychological disorders.	3 Credits
	PSYX 378 - Intro to Clinical Psyc Offered intermittently. Prereq., PSYX 340. Clinical psychology as a science and a profession. Theoretical models and techniques of assessment and intervention. Case illustrations.	3 Credits
	S W 300 - Hum Behav & Soc Environ Offered autumn and spring. Prereq., SW 100 and 200, and junior standing in Social Work. Using the ecological-social systems framework, the integration of knowledge and concepts from the social and behavioral sciences for analysis and assessment of problems and issues relevant to professional social work practice.	3 Credits
	S W 420 - Child Abuse/Child Welfare Offered autumn. Prereq., junior standing or consent of instr. Signs and symptoms of physical and sexual abuse and neglect, family dynamics in abuse and neglect, the legal context, programs of prevention and intervention, foster care, special needs adoptions and related issues in child welfare.	3 Credits
	SOCI 330 - Juvenile Delinquency Offered spring. Prereq., SOCI 101S. The study of juvenile delinquency as a social phenomenon, including the emergence of "juvenile delinquency" as a social and legal concept, the nature of delinquency, and theoretical explanations of delinquent behavior.	3 Credits
	SOCI 332 - Sociology of the Family Offered autumn. Prereq., SOCI 101S. Historical, cross-cultural, and analytical study of the family. Emphasis on ideology, social structures, and agency affecting family composition and roles.	3 Credits
Minimum Required Grade: C		0-12 Total Credits Required

Adolescence

Rule: May complete any of the following courses

	Course	Credits
	EDSP 462 - Spec Ed Law, Policy, Practice Offered autumn and even-numbered summers. Historic and current perspectives on laws, policies and practices of the special education and related fields. Coverage of all aspects of the special education process including collaborative practices.	3 Credits
	EDU 221 - Ed Psych & Measuremnt Offered autumn and spring. Prereq., admission to Teacher Education program in secondary and K-12. Analysis of fundamental psychological concepts underlying classroom teaching and management, learning and evaluation including educational measurement. Emphasis on cognition, developmental, and motivational aspects of learning.	3 Credits
	EDU 345 - Excptnlty & Clsrm Mgmt Offered autumn and spring. Prereq., Admission to the Teacher Education Program in secondary and K-12. Focus on classroom management and the characteristics and instructional adaptations for exceptional students in the regular classroom. Addresses the Individuals with Disabilities Education Act and subsequent reauthorizations, presents practices for working with students who are at-risk and students with disabilities in inclusive settings, and includes technological considerations.	3 Credits
	PHAR 110N - Use & Abuse of Drugs Offered autumn and spring. Drug dependence and abuse.	3 Credits
	PSYX 339 - Curr Tpcs/Development Psyc Offered intermittently. Prereq., PSYC 240S or 245. Topical reviews of theories, research and applications in developmental psychology.	3 Credits
	PSYX 345 - Child & Adolescent Psych Dis Offered intermittently. Prereq., PSYX 100S and 230. Study of causes, characteristics, assessment and treatment of emotional, social and intellectual disorders. The age span studied will range from infancy through adolescence.	3 Credits
	PSYX 376 - Prin Cognit Behav Mod Offered intermittently. Prereq., PSYX 270S. Study of basic principles, assumptions, methodology and applications of behavior modification. Discussion of current literature relevant to behavioral assessment and treatment of major psychological disorders.	3 Credits
	PSYX 378 - Intro to Clinical Psyc Offered intermittently. Prereq., PSYX 340. Clinical psychology as a science and a profession. Theoretical models and techniques of assessment and intervention. Case illustrations.	3 Credits

	S W 300 - Hum Behav & Soc Environ Offered autumn and spring. Prereq., SW 100 and 200, and junior standing in Social Work. Using the ecological-social systems framework, the integration of knowledge and concepts from the social and behavioral sciences for analysis and assessment of problems and issues relevant to professional social work practice.	3 Credits
	S W 450 - Children and Youth at Risk Offered autumn or spring. Focus on the aspects of society that pose a threat to today's youth and the ramification of those threats on youth development and behavior. Resilience and protective factors for youth at risk and strategies to work with those youth. Attention to related systems in Missoula and Montana, including juvenile justice, mental health, child protection, substance abuse, and education.	3 Credits
	SOCI 330 - Juvenile Delinquency Offered spring. Prereq., SOCI 101S. The study of juvenile delinquency as a social phenomenon, including the emergence of "juvenile delinquency" as a social and legal concept, the nature of delinquency, and theoretical explanations of delinquent behavior.	3 Credits
Minimum Required Grade: C		0-12 Total Credits Required

Gerontology

Rule: May complete any of the following courses

	Course	Credits
	AHHS 325 - Introduction to Gerontology Offered spring. Prereq., junior standing or consent of instr. An interdisciplinary discussion of the health and social issues of older persons, utilizing didactic presentations, clinical demonstrations, and curricular modules.	3 Credits
	AHHS 327 - MGS Meeting (R-3) Offered spring. Attendance and participation in the Montana Gerontology Society meeting held annually in April.	1 Credits
	AHHS 430 - Health Aspects of Aging Offered spring. Overview of the health aspects of aging in the United States including biological theories of aging, normal physiological changes associated with aging systems, common pathological problems associated with aging, cultural and ethnic differences in the health of elders, health promotion and healthy aging, and the health care continuum of care for older persons.	3 Credits
	PSYX 233 - Fund of Psychology of Aging Offered every term. An overview of theories and research findings in the psychology of adulthood and aging.	3 Credits

	PSYX 339 - Curr Tpcs/Development Psyc Offered intermittently. Prereq., PSYC 240S or 245. Topical reviews of theories, research and applications in developmental psychology.	3 Credits
	S W 455 - Social Gerontology Offered autumn. Examination of the field of social gerontology, including an examination of the major bio/psycho/social/cultural/spiritual theories of aging, the service system, social and health issues, family and care-giving dynamics, social policy, and end of life concerns.	3 Credits
Minimum Required Grade: C		0-12 Total Credits Required

Family Development

Rule: May complete any of the following courses

	Course	Credits
	COMX 311 - Family Communication Offered yearly. An examination of communication in marriage/romantic partnership, parent-child, and extended family relationships. Topics include intimacy, power, decision-making, problem solving, identity formation, and interpersonal perception.	3 Credits
	COMX 414 - Comm in Personal Relationshps Offered yearly. Prerequisite, COMX 115S or consent of instructor. An examination of the functions, types, and historical context of close personal relationships with an in-depth study of the role of communication in friendships and romantic relationships.	3 Credits
	EDEC 310 - Child in the Family Offered spring even-numbered years. Prereq., PSYX 100S. Physical, social, emotional and intellectual development, learning theories and child rearing practices related to children 0-6 years of age.	3 Credits
	PSYX 348 - Psychology of Family Violence Offered spring. Prereq., PSYX 100S. Same as WGS 385. Exploration of theoretical explanations for the presence of violence in American families; research and interventions in such areas as child physical and sexual abuse, battering of women, marital rape, spousal homicide, etc.	3 Credits
	S W 423 - Addiction Studies Offered spring. Same as PSYX 441 and SOCI 433. Examination of chemical dependency and behavioral compulsions, including alcohol and other drugs, gambling, eating disorders, sexual addictions. Ecosystems perspective on etiology, treatment, prevention, family dynamics, community response, and societal contributors. Students engage in a service learning community project which is integrated into the classroom through initial training, regular reflection, and other activities.	3 Credits

	SOCI 332 - Sociology of the Family Offered autumn. Prereq., SOCI 101S. Historical, cross-cultural, and analytical study of the family. Emphasis on ideology, social structures, and agency affecting family composition and roles.	3 Credits
Minimum Required Grade: C		0-12 Total Credits Required

College of Forestry and Conservation

Tom DeLuca, Dean

Mike Patterson, Associate Dean

The undergraduate curricular programs at the College of Forestry and Conservation (CFC) provide the knowledge and skills for students to become effective natural resource professionals. They offer a sequence of learning experiences that build the necessary confidence and critical thinking capabilities to help solve some of humanity's most pressing problems in the stewardship of our shared natural heritage.

Undergraduate programs at the College of Forestry and Conservation have evolved into a unique action-oriented, interdisciplinary experience where students integrate real-world issues into their coursework. Students will utilize the latest technologies in the assessment and analysis of natural resource challenges, and they will simultaneously apply this learning in multiple field settings across the unparalleled natural settings of Montana.

The five undergraduate majors in the College are science degrees, leading to a Baccalaureate of Science (B.S.) degree. These majors are: Forestry; Parks, Tourism, and Recreation Management; Wildlife Biology; Resource Conservation; and Ecological Restoration. These majors provide a strong foundation in knowledge about natural systems, science, analytical skills, and policy, but each is tailored to the specialized needs of a particular career track or research discipline in the natural resources management professions. Students have an opportunity to emphasize the disciplinary concentration of their choosing, but all students will receive a balance of ecological, physical, and social sciences.

Students uncertain about which specific major best meets their interests and needs will find that the ability to move between majors early in their student career is facilitated by a common foundational core of coursework. Each major's curricular program is designed to fulfill the broad educational goals for all graduates of the University of Montana, as well as the specific disciplinary requirements of civil service and professional accrediting organizations.

Preparation to Enter the College of Forestry and Conservation

Students planning to enter the College of Forestry and Conservation should attain a sound background in English, social studies, mathematics, biology, and other sciences. Entering freshmen and non-resident transfer students will be admitted in accordance with general university admission requirements listed previously in this catalogue. Resident transfer students or current UM students wanting to change their major to the College of Forestry and Conservation must have a grade point average of 2.0 or higher to be admitted.

Educational Framework at the College of Forestry and Conservation

Students at the College of Forestry and Conservation are expected to demonstrate a range of capabilities before graduation so they can better address the multiple demands facing modern natural resource managers. The College fosters learning through a combination of innovative teaching and scholarship with a focus on state of the art knowledge in the major fields and emerging natural resource challenges. Each major's curriculum follows a similar seven part structure that encourages the sequenced development of foundational knowledge, applied skills, and creative problem-solving. The following description illustrates how the curricula are organized to present the most efficient and engaging pathway to the full development of student capabilities:

Foundations of Science

Students will be required to have a solid understanding of the primary physical, chemical, and biological drivers of natural systems. Required for all students are an introductory course in inorganic chemistry and a basic biological science course (there are several introductory biology classes that will apply, depending on a student's major). Students in the Wildland Restoration major and the Forest Operations option within the Forest Management major will also take an introductory course in physics. Parks, Tourism, and Recreation Management majors will take introductory coursework in psychology or sociology to understand social drivers in relation to natural systems. Additionally, all students are encouraged to take one of the four introductory courses offered by the College that draw together multiple disciplines to demonstrate the historical and cultural dimensions of conservation: The Nature of Montana (NRSM 121S); Careers in Natural Resources (NRSM 180); Wildlife and People (WILD 105N); or International Forestry (NRSM 170). In the sophomore year most students

will take an introductory course in soils to become familiar with the cycling of energy and nutrients in terrestrial ecosystems while students in the Wildlife Biology major will take coursework in molecular biology and genetics. In their junior year all students take an upper division ecology class. The University's general education requirements and specific College majors ensure all students take additional natural and social science classes to provide the foundations necessary to understand and manage the natural and social systems underlying human uses of natural resources.

Quantitative and Analytical Skills

All students at the College will attain the quantitative analytical and measurement foundations needed for their professional or research career path. The freshmen level quantitative requirement rests on a proficiency in mathematics that is obtained through one of two routes depending on major: a college algebra/linear math/probability track or an introductory calculus track. All sophomore students take a statistics class which many fulfill through a special course in the analysis of multiple forms of measurement of natural resource characteristics, called Biometrics. Although not required for all majors, most students decide to take a special course in mapping that combines the common applications of geographic information systems (GIS) and the basic attributes of spatial analysis.

Applied Field Skills

A tremendous advantage of an education at the College of Forestry and Conservation is the proximity of an unlimited field laboratory in both the managed and untrammeled landscapes of Montana. All undergraduates will have multiple opportunities to learn in field settings as a part of lab sections associated with many of CFC's courses. Some specific academic opportunities, such as the College's Wilderness and Civilization Program, will take students on extended backcountry trips to gain first-hand knowledge of wild settings. Exceptional hands-on learning experiences are provided at the College's Lubrecht Experimental Forest located less than 30 miles from campus on the Blackfoot River. Since students must demonstrate competency and confidence in outdoor field work to be a successful natural resource professional, students are required to select a sophomore-level field measurements course within their major. Although advanced transfer students (>59 transfer credits) to the College; Parks, Tourism, and Recreation Students; and Wildlife Biology students may apply other relevant experiences to their field training requirement, completion of a field measurements course is expected before students may enroll in upper division courses, as the needed skills to succeed in subsequent, more advanced field labs depend on a solid core of field capabilities.

Communication

Effectiveness in addressing our shared problems in natural resource management depends on a person's ability to communicate. College of Forestry and Conservation students will graduate with considerable training in written communication with both lower-division requirements at the 200-level and a series of upper division courses where writing constitutes the major part of course expectations. Each major in the College provides a "distributed writing" menu for students entering into upper-division courses, such that each student will take at least three classes where writing skills are evaluated. All students take a public speaking class. Students wishing to gain more experience in public speaking and communication can also take a special class Natural Resources Interpretation (PTRM 310 (RECM 310)).

Professional Specialization

Each academic major in the College contains a sequence of courses and learning experiences tailored to the student's specific professional aspirations. Clusters of courses within a major prepare students to obtain the necessary knowledge and professional competencies to perform the tasks of a modern resource manager or research scientist. Course work combines biophysical and social science training to allow students to recognize and navigate the complexities and context of conservation sciences and natural resources management. Thus, each major has courses representing both ecological and policy development processes, as well as a progression of classes covering the knowledge areas and topics of major natural resources disciplines. Students will take a core of required courses (described in the sections below) as well as a balanced selection of "professional electives" to acquire sufficient balance and depth in their chosen field to emerge with an identified professional specialty.

Work Experience and Service Learning

Students at the College of Forestry and Conservation will apply what they have learned in real-world settings prior to graduation. This work experience can be obtained in many ways, via internships, summer employment, study abroad opportunities, or specially designed "service learning" courses. Service experiences will allow students to obtain credit, learn new material, and offer critical work to established organizations to advance conservation goals. In general, requirements for work experience or internships will be counted based on the number of hours worked over the course of a student's entire undergraduate career, with 400 hours or more of work necessary for graduation.

Capstone Experience

Each academic major in the College offers an opportunity for students to synthesize previous learning in a real-world project via either an undergraduate research project or the completion of a special, integrative "capstone" course. Undergraduate research projects are designed through close supervision of a student's academic advisor, while the capstone courses bring together a team of faculty who facilitate student oriented problem solving through a focus on an applied management problem or real world case studies that offer vital experience in the preparation of students for their professional careers.

Other University-wide Requirements for Academic Achievement

The University of Montana has established standards for graduation of all students that include demonstrated proficiencies in oral and written communication and symbolic systems as well as a selection of diverse learning experiences identified as "general education courses." The College's expectations for writing and quantitative skills more than fulfill university-wide requirements for communication and symbolic systems, and many of the courses offered by CFC also fulfill the categories within general education requirements. All CFC majors also offer sufficient opportunity for students to choose among the full range of UM courses as "free electives," such that each person might be able to explore new areas of learning at their own discretion.

Student Advising

All College of Forestry and Conservation students will have a full-time faculty advisor as well as the extensive advising support provided by the College's Office of Student Services. Students are paired with a faculty advisor who matches their academic and professional interests and serves as a mentor and advocate for students as they progress through individual academic achievements. Students may change their advisor at any time as their specific interests develop or change. New students needing an advisor and current students who wish to change advisors should contact the College's Office of Student Services. Students are required to consult with their advisors before each registration period but remain responsible for ensuring they fulfill the published requirements for graduation.

Graduation Auditing

All students will complete a graduation audit in the semester prior to their graduation to make sure that they have a sure pathway for successful completion of their chosen major.

Name	Minor	Certificate	Associate	Bachelor
Climate Change Studies	Requirements			
Ecological Restoration	Requirements			
Ecological Sciences & Restorat				Requirements
Fire Sciences & Management	Requirements			
Forestry				Requirements
Parks, Tourism &Rec Management				Requirements
Resource Conservation				Requirements
Wilderness Studies	Requirements			
Wildlife Biology	Requirements			Requirements

Forestry

In addition to special degree requirements listed previously, students selecting the BS Forestry degree must complete the following required courses or their equivalent, if transferred from another college or university. Transference and equivalency will be determined by the University, College of Forestry and Conservation, and Forestry program. Electives may be taken at any time, keeping in mind these requirements as well as the University's General Education requirements for graduation.

Department Faculty

Professor

Edwin Burke, Professor of Wood Science & Technology
LLoyd Paul Queen, Professor of Remote Sensing; Director, National Center for Landscape Fire Analysis

Associate Professor

David Affleck, Associate Professor of Biometrics
Chair, Department of Forest Management
Director, Inland Northwest Growth & Yield Cooperative
Solomon Dobrowski, Associate Professor of Forest Landscape Ecology
Beth Dodson, Associate Professor of Integrated Natural Resource
John Goodburn, Associate Professor of Silviculture; Undergraduate Program Director, Forestry
Christopher R. Keyes, Research Professor of Silviculture
Peter Kolb, Associate Professor of Forest Ecology & Management
Carl Seielstad, Associate Research Professor; Fire/Fuels Program Manager, National Center for Landscape Fire Analysis

Assistant Professor

Kelsey Jencso, Assistant Professor, Watershed Hydrologist
Andrew Larson, Associate Professor of Forest Ecology
Alexander L. Metcalf, Research Assistant Professor

Adjunct

James Riddering, Adjunct Research Assistant Professor; Remote Sensing Program Manager, National Center for Landscape Fire Analysis

Forest Resources Management B.S.

Bachelor of Science - Forestry; Forest Resources Mgmt Option

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 90
Required Cumulative GPA: 2.0

Major Required Courses

Rule: Must take all courses

	Course	Credits
	FORS 130 - Intro Forestry Field Skills Offered autumn. Prereq., Forestry major or consent of instructor. This course is focused on developing introductory forestry field skills through experiential learning at the College's Lubrecht Experimental Forest. Classroom lecture and experiences that introduce students to orienteering, map reading, GPS, tree measurements, fire and fuels management, recreation, human dimensions, hydrology, wood products, and the careers possible with a Forestry degree.	2 Credits

	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	FORS 202 - Forest Mensuration Offered spring. Prereq., FORS 201 or STAT 216 or SOCI 202 or WILD 240; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. The theory and practice of timber inventory and growth projection, including field measurements, sampling procedures, statistical methods, inventory compilation, and stand growth simulation under specified management prescriptions. Stand growth under specified management prescriptions.	3 Credits
	FORS 240 - Tree Biology Offered autumn and spring. Suggested coreq., FORS 241N. The physical and biological requirements for the growth and development of trees. Discussions of: identification, classification, range, and economic importance of the major tree species of North America.	2 Credits
	FORS 241N - Dendrology Offered autumn and spring. Suggested coreq., FORS 240. Methods and techniques for identifying the major families of North American trees, based on gross morphological and anatomical features. Building and use of identification keys.	3 Credits
	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits

Minimum Required Grade: C-	22 Total Credits Required

Outside Major Courses Required

Rule: Must take all courses

Note: Can take THTR 120A Intro to Acting I in place of COMX 111A; Can take M 121 College Algebra AND M 122 College Trigonometry to satisfy M 151;Can take PHSX 205/206 College Physics I and Lab in place of M 162

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits

	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		24-27 Total Credits Required

Major Required Courses

Rule: Must take all courses

	Course	Credits
	FORS 320 - Forest Environmental Economics Offered autumn. Prereq., ECNS 201S; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. Economic techniques to support decision making about the allocation of scarce resources, and management of forests for timber and other ecosystem services.	3 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 340 - Forest Product Manufacturing Offered autumn. Survey of the manufacture of wood-based products generated from timber harvest. Laboratory field trips to several local manufacturing facilities.	2 Credits
	FORS 341 - Timber Harvesting & Roads Offered spring. Prereq., NRSM 200 or WRIT 222. An overview of harvesting system capabilities and selection for multiple resource objectives. Fundamentals of forest road management. Best management practices as they apply to forest operations in Montana and the western United States.	3 Credits

	FORS 349 - Practice of Silviculture Offered autumn. Prereq., FORS 202 or FORS 302 and FORS 241N and either prereq or coreq FORS 330. Practice of Silviculture is designed primarily for Forestry majors (open to others with appropriate prerequisites), and will consider the conceptual foundations behind various silvicultural practices and techniques, as well as and their application in forest ecosystems to meet multiple resource objectives. The course will cover natural stand dynamics, stand assessment and site classification schemes, even- and uneven-aged silvicultural systems, thinning/stand density concepts, regeneration practices, stand diagnosis and prescription development, vegetative management strategies for diverse objectives, along with quantitative assessment and modeling of alternative prescriptions.	3 Credits
	FORS 440 - Forest Stand Management Offered autumn. Prereq., FORS 202 or 302; FORS 341; FORS 347 or 349. The management and manipulation of forest stands to reach multiple objectives, with a focus on the planning of forest operations for a community partner.	3 Credits
	FORS 481 - Forest Planning Offered spring. Prereq., FORS 320; FORS 347 or FORS 349 or consent of instr. Integrated multiple use planning at the forest-wide level: defining multi-resource management goals, generating management alternatives, projecting outcomes, assessing environmental impacts, and implementing preferred option.	3 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
Minimum Required Grade: C-		26 Total Credits Required

Professional Electives

Rule: Must take at least 18 total credits from the combined subcategories
Note: NOTE - Must take 6 credits beyond major requirements to earn a minor
Minimum Required Grade: C-
18 Total Credits Required

Biophysical Sciences

Rule: Must take at least one course from the list below

	Course	**Credits**

	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits
	FORS 333 - Basic&Applied Fire Ecology Offered spring. Prereq., FORS 230. A detailed, analysis of fire ecology in terrestrial ecosystems with a focus on the Rocky Mountains, including fire history, fire effects, landscape pattern, land use legacies, and management implications.	3 Credits
	FORS 342 - Wood Anatomy, Properties, & ID Offered spring. Prereq., BIOO 105N or FORS 240 or FORS 241N. Lecture and laboratory investigation of the structure, identification and physical and mechanical properties of the commercial tree species of North America.	3 Credits
	NRSM 335 - Environmental Entomology Offered autumn odd years. An introduction to the importance of insects in ecosystem function and process, and their use in ecological monitoring as indicators of ecological change, degradation, and the efficacy of ecological restoration efforts. This course also covers the effects of climate change and biological invasions in the context of both pest and beneficial insect species.	3 Credits
	NRSM 418 - Ecosystem Climatology Interactions between the biosphere and atmosphere to advanced undergraduate students and graduate students. This course will explore the interactions between Earth's biosphere and atmosphere and how they affect climate over a range of scales. We will focus on the exchange of energy, mass, and important elements between the biosphere and atmosphere and how this exchange can lead to fascinating feedbacks in Earth's climate system. Basic physics and math is not required but it is recommended.	3 Credits
	WILD 370 - Wildlife Habitat Cons & Mgmt Offered autumn and spring. Prereq., junior/senior standing in wildlife biology, BIOE 370, or consent of instr. Application of principles of wildlife biology to conservation and management of wild bird and mammal habitats including field applications.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Management Application

Rule: Must take at least two courses

	Course	Credits
	FORS 230 - Forest Fire Management Offered spring. Fire as an ecological factor in Western forests is presented. Fire weather, the measurement of fire weather, and the factors of fuel, weather and topography that influence fire behavior, and fire management decisions are included. NFDRS, state and national fire policy evolutions are discussed. Basic fire suppression tactics are also presented.	2 Credits
	FORS 232 - Forest Insects & Diseases Offered spring. Identification, significance of and remedies for insect infestations and infectious and non-infectious diseases of forests and forest products.	2 Credits
	FORS 331 - Wildland Fuel Management Offered autumn. Prereq., FORS 230 or consent of instr. The fire ecology of some western vegetation types is discussed. Elements of the principles of wildland fuel management are presented. Prescribed fire use and mechanical manipulation are matched to historic ecosystem processes. Smoke management considerations and health issues are also presented.	3 Credits
	FORS 434 - Advanced Forest Roads Offered autumn. Prereq., FORS 341. The purpose of this course is to help students understand the principles and skills of forest road design and the concepts of forest transportation planning. The course will cover the basic topics of road location, design, construction, and maintenance and provide students with techniques to identify the combination of roads, facilities and transport systems which minimize costs and negative environmental impacts.	2 Credits
	FORS 435 - Advaced Timber Harvesting Offered autumn. Prereqs., FORS 341. This course covers the fundamentals of logging feasibility and cost analyses of various timber harvesting systems including the characteristics and performance of ground vehicles, cable and aerial systems; cost factors and cost analysis procedures; safety issues; and environmental impacts of harvesting systems .	2 Credits
	NRSM 360 - Rangeland Mgt (equiv 260) Offered autumn. Prereq., junior standing or consent of instr. An introduction to rangelands and their management, grazing influences, class of animal, grazing capacity, control of livestock distribution, improvements, competition and interrelationships with wildlife. Laboratory exercises to gain on-site experience on topics and concepts presented in lectures.	3 Credits
	NRSM 485 - Watershed Management Offered intermittently. Prereq., NRSM 385 or consent of instr. Effects of land management practices on water and sediment yields from wildland watersheds. Introduction to statistical methods in hydrology. Introduction to water yield and sediment modeling techniques.	3 Credits

	WILD 275 - Wildlife Conservation Offered spring. Prereq., sophomore standing or consent of instr. Principles of animal ecology and framework of wildlife administration as a basis for the conservation of wild birds and animals, and biodiversity. Intended for non-wildlife biology majors.	2 Credits
Minimum Required Grade: C-		4-6 Total Credits Required

Policy and Social Science

Rule: Must take at least one course from the list below

	Course	Credits
	ENST 230H - Nature and Society UM campus course offered spring. Explores the relationship between ideas about nature and the development of political and social ideas, institutions, and practices, primarily in western (Euro-American) society. Complements ethics offerings in philosophy aimed at environmental studies majors.	3 Credits
	FORS 436 - Project Appraisal Offered autumn. Prereq., FORS 320 or consent of instructor. A suite of techniques, collectively referred to as project appraisal methods, facilitate evaluation of alternative projects. In this applied, computer laboratory-based course, students will become familiar with the use of discounted cash flow analysis and mathematical programing to evaluate proposed courses of action and recommend the economically efficient alternative. Skills will be developed applying these techniques to problems faced by natural resource managers and policy-makers.	3 Credits
	NASX 303E - Ecol Persp in Nat Amer Trad Offered Autumn and Spring. An examination of Native American environmental ethics and tribal and historical and contemporary use of physical environmental resources.	3 Credits
	NRSM 370S - Wildland Conserv Pol/Govrnance Offered autumn and spring. Examination of the historical, philosophical, and legislative background for development and management of our national system of wilderness areas, wild and scenic rivers, trails, and national parks; their place in our social structure. Part of the Wilderness and Civilization program.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 424 - Community Forestry & Conservtn Offered spring. Co-convened with NRSM 524. In-depth examination of the history, theory and management issues faced in community-driven forestry and conservation in the United States and abroad. Cannot get credit for both NRSM 424 and NRSM 524.	3 Credits

	NRSM 425 - Nat Res & Envir Economics Offered alternate spring. Prereq., ENSC 201S or FORS 320; and M 115, M 121, M 122, M 151, M 162, M 171, or 172. Introduction to analytical approaches for economic analysis of management of non-renewable resources, fisheries, forests, threatened and endangered species, and the atmosphere.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
	PTRM 217S - Wildland Recreation Management Offered autumn and spring. The management of land as an environment for outdoor recreation. Understanding the relationship between the visitor, resource base and management policies. Recreation planning on multiple use forest lands, parks, wilderness areas and private lands.	3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
	PTRM 310 - Nat Res Interp and Comm Offered autumn. Prereq., COMX 111A or THTR 120A, junior or senior standing in PTRM or RECM. Principles, concepts, techniques essential to providing high quality interpretive programs in natural or cultural history.	3 Credits
	PTRM 380 - Rec Admin & Leadership Offered spring. The theories, principles and practices that shape the administration of recreation opportunities offered through public, nonprofit and private agencies and organizations. Course content includes leadership roles of recreation managers, organizational structure, management, legality, risk management, staffing, communication and public relations.	3 Credits

	PTRM 451 - Tourism & Sustainability Offered spring. Prereq., PTRM 210, or consent of instructor. Theories and conceptual models are applied to analyzing relationships between the integration of planning theories to sustainability concepts.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Measurement and Analysis

Rule: Must take at least one course from the list below

	Course	Credits
	FORS 307 - Forest Veg Mgt Models (R-6) Offered intermittently. Consent of instr. Hands on experience in applying the common simulation models used by forest managers in forecasting the development of forest vegetation. Includes elements of model building and evaluation.	3 Credits
	FORS 350 - Forestry Apps of GIS Offered spring. Prereq., FORS 250 or FORS 284 or GPHY 284. Introduction to the basic concepts and techniques of computerized spatial data management and analysis systems and application to natural resource management.	3 Credits
	FORS 351 - Env Remote Sensing Offered spring. The theory and application of photo- and electro-optical remote sensing for mapping resources and developing information systems.	3 Credits
	GEO 421 - Hydrology Offered autumn. Prereq. one semester college calculus and physics or consent of instructor. Introduction to the physical mechanisms that drive the water cycle at different scales. The course covers heat, momentum and mass transfer and storage mechanisms in turbulent systems and their role in the global and local climates. At the local scale, the equations that govern surface and subsurface water flows are studied. Along with the overarching goals, students will improve their quantitative skills, will gain experience accessing and reading the professional literature and will improve their capabilities to acquire knowledge independently.	3 Credits
	WILD 373 - Wildlife Techniques Offered spring. Prereq., any statistics course; one 300-level ecology or wildlife biology course. Lab and field oriented class in commonly-used wildlife research and management techniques.	2 Credits

Minimum Required Grade: C-	2-3 Total Credits Required

Writing within Major

Rule: Must complete the following subcategories

15 Total Credits Required

Lower Division Writing

Rule: All are required

	Course	Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Writing

Rule: Must take at least 3 of the following courses

	Course	Credits

	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 340 - Forest Product Manufacturing Offered autumn. Survey of the manufacture of wood-based products generated from timber harvest. Laboratory field trips to several local manufacturing facilities.	2 Credits
	FORS 341 - Timber Harvesting & Roads Offered spring. Prereq., NRSM 200 or WRIT 222. An overview of harvesting system capabilities and selection for multiple resource objectives. Fundamentals of forest road management. Best management practices as they apply to forest operations in Montana and the western United States.	3 Credits
	FORS 349 - Practice of Silviculture Offered autumn. Prereq., FORS 202 or FORS 302 and FORS 241N and either prereq or coreq FORS 330. Practice of Silviculture is designed primarily for Forestry majors (open to others with appropriate prerequisites), and will consider the conceptual foundations behind various silvicultural practices and techniques, as well as and their application in forest ecosystems to meet multiple resource objectives. The course will cover natural stand dynamics, stand assessment and site classification schemes, even- and uneven-aged silvicultural systems, thinning/stand density concepts, regeneration practices, stand diagnosis and prescription development, vegetative management strategies for diverse objectives, along with quantitative assessment and modeling of alternative prescriptions.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Math within Major

Rule: All are required

Note: Two courses can be substituted for M 151: M 121 College Algebra AND M 122 College Trig

	Course	**Credits**
	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits

Minimum Required Grade: C-	4-6 Total Credits Required

Symbolic System

Rule: Must take one of the following courses

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Expressive Arts Requirement

Rule: Must take one of the following courses

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science within Major

Rule: Must take the following course

	Course	Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Ethical & Human Values Elective within Major

Rule: Can take the elective course

	Course	Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences within Major

Rule: Must take at least 2 courses and include a lab course

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	FORS 241N - Dendrology Offered autumn and spring. Suggested coreq., FORS 240. Methods and techniques for identifying the major families of North American trees, based on gross morphological and anatomical features. Building and use of identification keys.	3 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Forest Operations

In addition to special degree requirements listed previously, students selecting the BS Forestry degree must complete the following required courses or their equivalent, if transferred from another college or university. Transference and equivalency will be determined by the University, College of Forestry and Conservation, and Forestry program. Electives may be taken at any time, keeping in mind these requirements as well as the University's General Education requirements for graduation.

Bachelor of Science - Forestry; Forest Operations Option

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 82
Required Cumulative GPA: 2.0

Major Required Courses

Rule: Must take all courses

	Course	**Credits**
	FORS 130 - Intro Forestry Field Skills Offered autumn. Prereq., Forestry major or consent of instructor. This course is focused on developing introductory forestry field skills through experiential learning at the College's Lubrecht Experimental Forest. Classroom lecture and experiences that introduce students to orienteering, map reading, GPS, tree measurements, fire and fuels management, recreation, human dimensions, hydrology, wood products, and the careers possible with a Forestry degree.	2 Credits

	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	FORS 202 - Forest Mensuration Offered spring. Prereq., FORS 201 or STAT 216 or SOCI 202 or WILD 240; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. The theory and practice of timber inventory and growth projection, including field measurements, sampling procedures, statistical methods, inventory compilation, and stand growth simulation under specified management prescriptions. Stand growth under specified management prescriptions.	3 Credits
	FORS 240 - Tree Biology Offered autumn and spring. Suggested coreq., FORS 241N. The physical and biological requirements for the growth and development of trees. Discussions of: identification, classification, range, and economic importance of the major tree species of North America.	2 Credits
	FORS 241N - Dendrology Offered autumn and spring. Suggested coreq., FORS 240. Methods and techniques for identifying the major families of North American trees, based on gross morphological and anatomical features. Building and use of identification keys.	3 Credits
	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits

Minimum Required Grade: C-	22 Total Credits Required

Outside Major Courses Required

Rule: Must take all courses

Note: Can take THTR 120A Intro to acting in place of COMX 111A; Can take M 121 College Algebra AND M 122 College Trigonometry to satisfy M 151; Can take PHSX 205/206 College Physics I and Lab in place of M 162

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits

	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		22-24 Total Credits Required

Major Required Courses

Rule: Must take all courses

	Course	Credits
	FORS 320 - Forest Environmental Economics Offered autumn. Prereq., ECNS 201S; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. Economic techniques to support decision making about the allocation of scarce resources, and management of forests for timber and other ecosystem services.	3 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 340 - Forest Product Manufacturing Offered autumn. Survey of the manufacture of wood-based products generated from timber harvest. Laboratory field trips to several local manufacturing facilities.	2 Credits
	FORS 341 - Timber Harvesting & Roads Offered spring. Prereq., NRSM 200 or WRIT 222. An overview of harvesting system capabilities and selection for multiple resource objectives. Fundamentals of forest road management. Best management practices as they apply to forest operations in Montana and the western United States.	3 Credits

	FORS 349 - Practice of Silviculture Offered autumn. Prereq., FORS 202 or FORS 302 and FORS 241N and either prereq or coreq FORS 330. Practice of Silviculture is designed primarily for Forestry majors (open to others with appropriate prerequisites), and will consider the conceptual foundations behind various silvicultural practices and techniques, as well as and their application in forest ecosystems to meet multiple resource objectives. The course will cover natural stand dynamics, stand assessment and site classification schemes, even- and uneven-aged silvicultural systems, thinning/stand density concepts, regeneration practices, stand diagnosis and prescription development, vegetative management strategies for diverse objectives, along with quantitative assessment and modeling of alternative prescriptions.	3 Credits
	FORS 434 - Advanced Forest Roads Offered autumn. Prereq., FORS 341. The purpose of this course is to help students understand the principles and skills of forest road design and the concepts of forest transportation planning. The course will cover the basic topics of road location, design, construction, and maintenance and provide students with techniques to identify the combination of roads, facilities and transport systems which minimize costs and negative environmental impacts.	2 Credits
	FORS 435 - Advaced Timber Harvesting Offered autumn. Prereqs., FORS 341. This course covers the fundamentals of logging feasibility and cost analyses of various timber harvesting systems including the characteristics and performance of ground vehicles, cable and aerial systems; cost factors and cost analysis procedures; safety issues; and environmental impacts of harvesting systems .	2 Credits
	FORS 436 - Project Appraisal Offered autumn. Prereq., FORS 320 or consent of instructor. A suite of techniques, collectively referred to as project appraisal methods, facilitate evaluation of alternative projects. In this applied, computer laboratory-based course, students will become familiar with the use of discounted cash flow analysis and mathematical programing to evaluate proposed courses of action and recommend the economically efficient alternative. Skills will be developed applying these techniques to problems faced by natural resource managers and policy-makers.	3 Credits
	FORS 440 - Forest Stand Management Offered autumn. Prereq., FORS 202 or 302; FORS 341; FORS 347 or 349. The management and manipulation of forest stands to reach multiple objectives, with a focus on the planning of forest operations for a community partner.	3 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
Minimum Required Grade: C-		30 Total Credits Required

Forest Management Elective

Rule: Must take at least one course

	Course	Credits
	FORS 230 - Forest Fire Management Offered spring. Fire as an ecological factor in Western forests is presented. Fire weather, the measurement of fire weather, and the factors of fuel, weather and topography that influence fire behavior, and fire management decisions are included. NFDRS, state and national fire policy evolutions are discussed. Basic fire suppression tactics are also presented.	2 Credits
	FORS 232 - Forest Insects & Diseases Offered spring. Identification, significance of and remedies for insect infestations and infectious and non-infectious diseases of forests and forest products.	2 Credits
	NRSM 265 - Elements of Ecological Restora Offered autumn. Prereq., one course in the ecological or biological sciences: BIOO 105N, BIOB 160N, BIOB 170N, BIOB 172, BIOE 370, BIOE 428, BIOE 447 or BIOE 448; or FORS 330; or NRSM 271N or NRSM 462 or consent of instructor. Overview of the natural and social science elements of ecological restoration, including the ecological foundations of restoration, practices used to restore terrestrial and aquatic habitats, philosophical and ethical challenges involved, and current initiatives in Montana and the United States. Includes Saturday field trips.	3 Credits
	PTRM 217S - Wildland Recreation Management Offered autumn and spring. The management of land as an environment for outdoor recreation. Understanding the relationship between the visitor, resource base and management policies. Recreation planning on multiple use forest lands, parks, wilderness areas and private lands.	3 Credits
	WILD 275 - Wildlife Conservation Offered spring. Prereq., sophomore standing or consent of instr. Principles of animal ecology and framework of wildlife administration as a basis for the conservation of wild birds and animals, and biodiversity. Intended for non-wildlife biology majors.	2 Credits
Minimum Required Grade: C-		2-3 Total Credits Required

Resource Protection Electives

Rule: Must take one course from the list below

	Course	Credits
	FORS 331 - Wildland Fuel Management Offered autumn. Prereq., FORS 230 or consent of instr. The fire ecology of some western vegetation types is discussed. Elements of the principles of wildland fuel management are presented. Prescribed fire use and mechanical manipulation are matched to historic ecosystem processes. Smoke management considerations and health issues are also presented.	3 Credits

	NRSM 360 - Rangeland Mgt (equiv 260) Offered autumn. Prereq., junior standing or consent of instr. An introduction to rangelands and their management, grazing influences, class of animal, grazing capacity, control of livestock distribution, improvements, competition and interrelationships with wildlife. Laboratory exercises to gain on-site experience on topics and concepts presented in lectures.	3 Credits
	NRSM 415 - Environmental Soil Science Offered spring odd-numbered years Prereq., ENSC 245N or NRSM 210N or consent of instr. A detailed analysis of the physical, chemical and biological properties of soils and how they function, with a focus on soil processes and how they affect, and are affected by human activities. Specific topics include element cycling, water quality, the effects of environmental change soil biogeochemistry, plant-soil interactions, and the consequences of large-scale disturbances on soil processes.	3 Credits
	NRSM 455 - Riparian Ecology & Management Offered intermittently. Prereqs., successful completion or concurrent enrollment in NRSM 385 and completion of one of the following introductory ecology courses: BIOE 172, BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462. Importance of riparian/wetland areas and the complexities associated with their management for short and long term benefits.	3 Credits
	NRSM 485 - Watershed Management Offered intermittently. Prereq., NRSM 385 or consent of instr. Effects of land management practices on water and sediment yields from wildland watersheds. Introduction to statistical methods in hydrology. Introduction to water yield and sediment modeling techniques.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethics and Social Science Elective

Rule: Must take one course from the list below

	Course	Credits
	NASX 303E - Ecol Persp in Nat Amer Trad Offered Autumn and Spring. An examination of Native American environmental ethics and tribal and historical and contemporary use of physical environmental resources.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 424 - Community Forestry & Conservtn Offered spring. Co-convened with NRSM 524. In-depth examination of the history, theory and management issues faced in community-driven forestry and conservation in the United States and abroad. Cannot get credit for both NRSM 424 and NRSM 524.	3 Credits

	NRSM 425 - Nat Res & Envir Economics Offered alternate spring. Prereq., ENSC 201S or FORS 320; and M 115, M 121, M 122, M 151, M 162, M 171, or 172. Introduction to analytical approaches for economic analysis of management of non-renewable resources, fisheries, forests, threatened and endangered species, and the atmosphere.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Writing Within Major

Rule: Must complete the following subcategories

15 Total Credits Required

Lower Division Writing

Rule: Need to take all listed

	Course	**Credits**
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Writing

Rule: Must take at least three courses

	Course	Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 341 - Timber Harvesting & Roads Offered spring. Prereq., NRSM 200 or WRIT 222. An overview of harvesting system capabilities and selection for multiple resource objectives. Fundamentals of forest road management. Best management practices as they apply to forest operations in Montana and the western United States.	3 Credits
	FORS 349 - Practice of Silviculture Offered autumn. Prereq., FORS 202 or FORS 302 and FORS 241N and either prereq or coreq FORS 330. Practice of Silviculture is designed primarily for Forestry majors (open to others with appropriate prerequisites), and will consider the conceptual foundations behind various silvicultural practices and techniques, as well as and their application in forest ecosystems to meet multiple resource objectives. The course will cover natural stand dynamics, stand assessment and site classification schemes, even- and uneven-aged silvicultural systems, thinning/stand density concepts, regeneration practices, stand diagnosis and prescription development, vegetative management strategies for diverse objectives, along with quantitative assessment and modeling of alternative prescriptions.	3 Credits
	FORS 440 - Forest Stand Management Offered autumn. Prereq., FORS 202 or 302; FORS 341; FORS 347 or 349. The management and manipulation of forest stands to reach multiple objectives, with a focus on the planning of forest operations for a community partner.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Math within Major

Rule: All are required

Note: Two courses can be substituted for M 151: M 121 College Algebra AND M 122 College Trig

	Course	Credits

	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
Minimum Required Grade: C-		4-6 Total Credits Required

Symbolic Systems

Rule: Must take the following course

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Expressive Arts within Major

Rule: Must take one of the following courses

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science within Major

Rule: Must take the following course

	Course	Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethical & Human Values Elective within Major

Rule: Can take the following elective course

	Course	Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Science within Major

Rule: Must take all courses

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Ecosystem Science and Restoration

Bachelor of Science in Ecosystem Science and Restoration

Ecological restoration — the process of assisting in the repair of damaged ecosystems— is one of the fastest growing areas of natural resource management. With increasing interest, there is a corresponding need for trained professionals who understand not only the science of restoration ecology but also the management practices and social factors that lead to successful project implementation. The College of Forestry and Conservation offers a Bachelor of Science and a minor in Ecosystem Science and Restoration. For more information see the Ecosystem Science and Restoration website.

Degree Options

Bachelor of Science in Ecosystem Science and Restoration (Aquatic and Terrestrial Options)

The major in Ecosystem Science and Restoration prepares students to tackle the complex challenges associated with repairing degraded ecosystems. Students select one of two options: the *Terrestrial Option*, which focuses on restoration of forests, grasslands, and other terrestrial ecosystems; or the *Aquatic Option* which focuses on stream, wetland, and groundwater restoration. Both options provide in-depth training in the science of restoration ecology and the management activities and human dimensions of restoration practice. Students engage in field-based learning, contribute to cutting-edge restoration projects, and are challenged to apply ecological theory to restoration practice. The major requires completion of a nine-credit restoration capstone, during which students gain hands-on real-world experience planning and implementing restoration projects in partnership with natural resource management agencies and organizations in western Montana.

A degree in Ecosystem Science and Restoration prepares students for careers as restoration practitioners with non-profit, private, or governmental agencies and for graduate school in ecology or natural resource management. Students who graduate with this major may qualify for the following federal civil service jobs: biological technician (Series 0404), ecologist (Series GS-408), forester (Series G-0460), hydrologist (Series GS-1315), range technician (Series GS-0455), and soil conservationist (Series GS-0457). More information on federal civil service requirements can be found at: http://www.opm.gov/qualifications/standards/indexes/alph-ndx.asp.

Minor in Ecosystem Science and Restoration

In addition to the major, the Ecosystem Science and Restoration program also offers a minor for students who wish to gain basic competency in restoration while pursuing another UM major.

Department Faculty

Professor

Cory Cleveland, Professor, Terrestrial Ecosystem Ecology; Chair, Department of Ecosystems & Conservation Sciences
F. Richard Hauer, UM Director-Institute on Ecosystems
Diana Six, Professor of Forest Entomology/Pathology

Associate Professor

Lisa Eby, Associate Professor of Aquatic Vertebrate Ecology; Undergraduate Program Director, Ecosystem Science & Restoration
Philip Higuera, Associate Professor of Fire Ecology
Cara Nelson, Associate Professor of Restoration Ecology

Assistant Professor

Ashley Ballantyne, Assistant Professor of Bioclimatology
Ben Colman, Assistant Professor of Aquatic Ecosystem Ecology
Kelsey Jencso, Assistant Professor, Watershed Hydrologist

Aquatic Ecosystem Sciences and Restoration

The major in Ecosystem Sciences and Restoration prepares students to tackle the complex challenges associated with repairing degraded ecosystems. Students can select one of two options: the terrestrial concentration, which focuses on the repair of terrestrial ecosystems; and the aquatic concentration, which focuses on stream, wetland, and groundwater restoration. Both options provide in-depth training in the science of restoration ecology and the management activities and human dimensions of restoration practice. Students engage in field-based learning, contribute to cutting-edge restoration projects, and are challenged to apply ecological theory to restoration practice. The major requires completion of a nine-credit restoration capstone, during which students gain hands-on real-world experience planning and implementing restoration projects in partnership with natural resource management agencies and organizations in western Montana.

A degree in Ecosystem Sciences and Restoration prepares students for careers as restoration practitioners with non-profit, private, or governmental agencies and for graduate school in ecology or natural resource management. Students who graduate with this major may qualify for the following federal civil service jobs: biological technician (Series 0404), ecologist (Series GS-408), forester (Series G-460), hydrologist (Series GS-1315) and soil conservationist (Series GS-457). More information on federal civil service requirements can be found at:http://www.opm.gov/qualifications/standards/indexes/alph-ndx.asp.

Bachelor of Science - Ecological Sciences & Restorat; Aquatic Option

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 89

Required Cumulative GPA: 2.0

Major Required Courses

Rule: Must take all courses

Note: Can take WRIT 325 Science Writing (honors) in place of NRSM 200; Can take NRSM 170 Intern'l Environ Change OR NRSM 180 Careers in Natural Resources in place of NRSM 121S

	Course	Credits
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	NRSM 265 - Elements of Ecological Restora Offered autumn. Prereq., one course in the ecological or biological sciences: BIOO 105N, BIOB 160N, BIOB 170N, BIOB 172, BIOE 370, BIOE 428, BIOE 447 or BIOE 448; or FORS 330; or NRSM 271N or NRSM 462 or consent of instructor. Overview of the natural and social science elements of ecological restoration, including the ecological foundations of restoration, practices used to restore terrestrial and aquatic habitats, philosophical and ethical challenges involved, and current initiatives in Montana and the United States. Includes Saturday field trips.	3 Credits

Minimum Required Grade: C-	9 Total Credits Required

Outside Major Required Courses

Rule: Must take all courses

Note: Can take FORS 201 Biometrics OR WILD 240 Into to Biostats in place of STAT 216; can take THTR 120 Acting I in place of COMX 111A

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits

	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits
	GEO 102N - Intro to Physical Geology Lab Offered autumn and spring. Prereq. or coreq., GEO 101N (preferred) or 105N or 108N. A series of laboratory and field experiences designed around basic geologic processes and materials. Familiarization with common minerals, rocks, land forms, and structures. Intended to provide laboratory experience primarily with GEO 101N, but can be taken with or following any of the other freshman GEO courses listed above.	1 Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits
	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		39 Total Credits Required

Major Required Courses

Rule: Must take all courses

Note: Can take NRSM 449 in place of NRSM 489E

	Course	Credits
	NRSM 344 - ESR Capstone Offered spring. Prereq., junior or senior standing in Ecological Restoration and successful completion of NRSM 265 and one advanced ecology course: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462.; and completion or concurrent enrollment in NRSM 465. This five-credit, service-learning course is the planning course for the capstone experience for students in the Ecosystem Science and Restoration major (although it is also open to students pursuing other majors). It is designed to get students active in research in ecosystem science and restoration ecology or in the application of ecological principles to restoration practice. The course includes lectures, labs, and hands-on experience working with ecologists and restoration practitioners from local government agencies, NGOs, or other organizations.	5 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	NRSM 465 - Restoration Ecology Offered spring. Prereq., graduate or junior or senior standing and NRSM 265 and one 300-400 level ecology courses: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462; or consent of instructor. This course covers the primary ecological theories that inform the practice of ecological restoration. Topics include the dynamic nature of ecological systems, community assembly, biodiversity and ecosystem functioning, food web dynamics, ecological engineering, macroecology, and statistical issues and study design.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
	NRSM 494 - Seminar Offered spring. Prereq., senior standing and successful completion or concurrent enrollment in NRSM 495; and consent of instr. This seminar provides a forum for students to share the results of practicum projects conducted in NRSM 495. Each student will lead at least one seminar during the semester.	1 Credits

	NRSM 495 - ESR Practicum (R-6) Offered every semester. Prereq., senior standing in the Ecological Resotration major and successful completion of NRSM 344, a faculty-approved practicum proposal; and consent of instructor. The goal of this service-learning practicum is for students to gain real-world experience in research, monitoring, or project implementation. Students will implement a project under the supervision of faculty and mentors from local management agencies, organizations or other sponsors.	1 To 6 Credits
Minimum Required Grade: C-		21 Total Credits Required

Outside Major Required Courses

Rule: Must take all courses

	Course	Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
Minimum Required Grade: C-		8 Total Credits Required

Restoration Aquatic Electives

Rule: Must take as least 9 credits

Note: WILD 485 Aquatic Macroinvertebrate Ecol. fall only

	Course	Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 439 - Stream Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N. The biota and biogeochemical processes of running waters with unifying principles and contemporary research approaches.	3 Credits

	BIOE 451 - Landscape Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Biophysical processes that determine landscape and ecosystem structure and function using remote sensing tools, geographic information systems and dynamic models to demonstrate landscape change.	3 Credits
	BIOL 435 - Comparative Animal Physiology Offered spring. Prereq., BIOB 260 or equivalent. Animal physiology with emphasis on diversity of functional processes, with strong links to broader ecological and evolutionary contexts.	3 Credits
	BIOO 340 - Biology and Mgmnt of Fishes Offered autumn. Prereq., BIOB 272 and either STAT 216 or WILD 240. Diversity, adaptations and ecology of fishes. Analysis and management of fish populations and communities.	4 Credits
	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	GEO 228 - Earth Surface Processes Spring semester. Prereq. GEO 101N-102N, M 121 and 122 or M 151. Introduction to the physical processes that affect the surface of the Earth, including global-scale energy distribution and balance, the hydrologic cycle, climate, weathering, transport mechanisms, and geomorphic processes.	2 Credits
	GEO 420 - Hydrogeology Offered spring. Prereq., GEO 101N-102N; PHSX 205N/206N or PHSX 215N/216N ; M 162 or 171 strongly recommended or consent of instr. Occurrence, movement, quality, and methods of quantification of groundwater. Geological framework and physics of groundwater flow. Supply, contamination, and management problems.	4 Credits
	GEO 421 - Hydrology Offered autumn. Prereq. one semester college calculus and physics or consent of instructor. Introduction to the physical mechanisms that drive the water cycle at different scales. The course covers heat, momentum and mass transfer and storage mechanisms in turbulent systems and their role in the global and local climates. At the local scale, the equations that govern surface and subsurface water flows are studied. Along with the overarching goals, students will improve their quantitative skills, will gain experience accessing and reading the professional literature and will improve their capabilities to acquire knowledge independently.	3 Credits
	GEO 460 - Process Geomorphology Offered autumn. Prereq., one semester college calculus and physics. Quantitative examination of landforms, runoff generation, weathering, mechanics of soil erosion by water and wind, mass wasting, glacial and periglacial processes and hillslope evolution.	4 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
	NRSM 408 - Global Cycles and Climate Offered spring even-numbered years. Same as CCS 408. An analysis of the earths major global biogeochemical cycles with a focus on the ways and extent to which each of them influences and interacts with the global climate system.	3 Credits
	NRSM 418 - Ecosystem Climatology Interactions between the biosphere and atmosphere to advanced undergraduate students and graduate students. This course will explore the interactions between Earth's biosphere and atmosphere and how they affect climate over a range of scales. We will focus on the exchange of energy, mass, and important elements between the biosphere and atmosphere and how this exchange can lead to fascinating feedbacks in Earth's climate system. Basic physics and math is not required but it is recommended.	3 Credits
	NRSM 455 - Riparian Ecology & Management Offered intermittently. Prereqs., successful completion or concurrent enrollment in NRSM 385 and completion of one of the following introductory ecology courses: BIOE 172, BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462. Importance of riparian/wetland areas and the complexities associated with their management for short and long term benefits.	3 Credits
	NRSM 485 - Watershed Management Offered intermittently. Prereq., NRSM 385 or consent of instr. Effects of land management practices on water and sediment yields from wildland watersheds. Introduction to statistical methods in hydrology. Introduction to water yield and sediment modeling techniques.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Social Science Elective Courses

Rule: must take at least 3 credits

	Course	**Credits**

	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits
	FORS 320 - Forest Environmental Economics Offered autumn. Prereq., ECNS 201S; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. Economic techniques to support decision making about the allocation of scarce resources, and management of forests for timber and other ecosystem services.	3 Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Writing Requirements

Rule: Must complete the following subcategories

15 Total Credits Required

> ### *Lower Division Writing*
> **Rule:** Complete all courses

	Course	Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Writing

Rule: Must take at least three courses

	Course	Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits

	NRSM 344 - Ecol. RestorationCapstone Offered spring. Prereq., junior or senior standing in Ecological Restoration and successful completion of NRSM 265 and one advanced ecology course: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462.; and completion or concurrent enrollment in NRSM 465. This five-credit, service-learning course is the planning course for the capstone experience for students in the Ecosystem Science and Restoration major (although it is also open to students pursuing other majors). It is designed to get students active in research in ecosystem science and restoration ecology or in the application of ecological principles to restoration practice. The course includes lectures, labs, and hands-on experience working with ecologists and restoration practitioners from local government agencies, NGOs, or other organizations.	5 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 495 - Ecological Restor Practicum (R-6) Offered every semester. Prereq., senior standing in the Ecological Resotration major and successful completion of NRSM 344, a faculty-approved practicum proposal; and consent of instructor. The goal of this service-learning practicum is for students to gain real-world experience in research, monitoring, or project implementation. Students will implement a project under the supervision of faculty and mentors from local management agencies, organizations or other sponsors.	3 To 6 Credits
	NRSM 499 - Senior Thesis (R-3) Offered autumn and spring. Prereq., senior standing and consent of instr. Preparation of a major paper based on study or research in a field selected according to the needs and objectives of the student.	1 To 3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Math requirements for major

Rule: Must take all courses

	Course	Credits
	M 171 - Calculus I Offered autumn and spring. Prereq., M 122 or 151 or ALEKS placement >= 5. Differential calculus, including limits, continuous functions, Intermediate Value Theorem, tangents, linear approximation, inverse functions, implicit differentiation, extreme values and the Mean Value Theorem. Integral Calculus including antiderivatives, definite integrals, and the Fundamental Theorem of Calculus.	4 Credits

	M 172 - Calculus II Offered autumn and spring. Prereq., M 171 or 181. Techniques of Integration. Area computations. Improper integrals. Infinite series and various convergence tests. Power series. Taylor's Formula. Polar coordinates. Parametric curves.	4 Credits
Minimum Required Grade: C-		8 Total Credits Required

Symbolic System

Rule: Must take one of the following courses

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WILD 240 - Intro to Biostatistics Offered autumn. Prereq., calculus and consent of instr. Introduction to statistical ecology: distributions, hypothesis testing, and fitting models to data with emphasis on problems in ecological sampling.	3 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Expressive Arts Requirement for Major

Rule: must take one of the following course

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science

Rule: May take the following course

	Course	Credits
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethical & Human Values Elective within Major

Rule: must take one of the following course

	Course	Credits
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences within Major

Rule: Must take all courses

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits

	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Terrestrial Ecosystem Sciences and Restoration

The major in Ecosystem Sciences and Restoration prepares students to tackle the complex challenges associated with repairing degraded ecosystems. Students can select one of two options: the terrestrial concentration, which focuses on the repair of terrestrial ecosystems; and the aquatic concentration, which focuses on stream, wetland, and groundwater restoration. Both options provide in-depth training in the science of restoration ecology and the management activities and human dimensions of restoration practice. Students engage in field-based learning, contribute to cutting-edge restoration projects, and are challenged to apply ecological theory to restoration practice. The major requires completion of a nine-credit restoration capstone, during which students gain hands-on real-world experience planning and implementing restoration projects in partnership with natural resource management agencies and organizations in western Montana.

A degree in Ecosystem Sciences and Restoration Minor prepares students for careers as restoration practitioners with non-profit, private, or governmental agencies and for graduate school in ecology or natural resource management. Students who graduate with this major may qualify for the following federal civil service jobs: biological technician (Series 0404), ecologist (Series GS-408), forester (Series G-460), hydrologist (Series GS-1315) and soil conservationist (Series GS-457). More information on federal civil service requirements can be found at:http://www.opm.gov/qualifications/standards/indexes/alph-ndx.asp.

Bachelor of Science - Ecological Sciences & Restorat; Terrestrial Option

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 88

Required Cumulative GPA: 2.0

Major Required Courses

Rule: Must take all courses

Note: Can take WRIT 325 Science Writing (honors) in place of NRSM 200; Can take NRSM 170 Intern'l Environ Change OR NRSM 180 Careers in Natural Resources in place of NRSM 121S

	Course	**Credits**
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
	NRSM 265 - Elements of Ecological Restora Offered autumn. Prereq., one course in the ecological or biological sciences: BIOO 105N, BIOB 160N, BIOB 170N, BIOB 172, BIOE 370, BIOE 428, BIOE 447 or BIOE 448; or FORS 330; or NRSM 271N or NRSM 462 or consent of instructor. Overview of the natural and social science elements of ecological restoration, including the ecological foundations of restoration, practices used to restore terrestrial and aquatic habitats, philosophical and ethical challenges involved, and current initiatives in Montana and the United States. Includes Saturday field trips.	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Outside Major Required Courses

Rule: Must take all courses

Note: Can take FORS 201 Biometrics OR WILD 240 Into to Biostats in place of STAT 216; Can take THTR 120A Acting I in place of COMX 111A

	Course	**Credits**
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits

	BIOB 260 - Cellular and Molecular Biology Offered autumn and summer. Prereq. BIOB 160N (preferred) or BCH 110/111 (preferred) or B- or higher in BIOH 112; and either CHMY 123 or CHMY 143. Analytical exploration of the structure and function of the cell, the fundamental unit of life, with an emphasis on energy transformations and information flow. Topics include molecular building blocks, membranes, organelles, and mechanisms of replication, gene expression, metabolism, signal transduction, cell birth, cell death, and cell differentiation.	4 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	CHMY 123N - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits

	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		31 Total Credits Required

Major Required Courses

Rule: Must take all courses

Note: Can take NRSM 449E in place of NRSM 489E

	Course	**Credits**
	NRSM 344 - ESR Capstone Offered spring. Prereq., junior or senior standing in Ecological Restoration and successful completion of NRSM 265 and one advanced ecology course: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462.; and completion or concurrent enrollment in NRSM 465. This five-credit, service-learning course is the planning course for the capstone experience for students in the Ecosystem Science and Restoration major (although it is also open to students pursuing other majors). It is designed to get students active in research in ecosystem science and restoration ecology or in the application of ecological principles to restoration practice. The course includes lectures, labs, and hands-on experience working with ecologists and restoration practitioners from local government agencies, NGOs, or other organizations.	5 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits

	NRSM 465 - Restoration Ecology Offered spring. Prereq., graduate or junior or senior standing and NRSM 265 and one 300-400 level ecology courses: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462; or consent of instructor. This course covers the primary ecological theories that inform the practice of ecological restoration. Topics include the dynamic nature of ecological systems, community assembly, biodiversity and ecosystem functioning, food web dynamics, ecological engineering, macroecology, and statistical issues and study design.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
	NRSM 494 - Seminar Offered spring. Prereq., senior standing and successful completion or concurrent enrollment in NRSM 495; and consent of instr. This seminar provides a forum for students to share the results of practicum projects conducted in NRSM 495. Each student will lead at least one seminar during the semester.	1 Credits
	NRSM 495 - ESR Practicum (R-6) Offered every semester. Prereq., senior standing in the Ecological Resotration major and successful completion of NRSM 344, a faculty-approved practicum proposal; and consent of instructor. The goal of this service-learning practicum is for students to gain real-world experience in research, monitoring, or project implementation. Students will implement a project under the supervision of faculty and mentors from local management agencies, organizations or other sponsors.	1 To 6 Credits
Minimum Required Grade: C-		21 Total Credits Required

Outside Major Required Courses

Rule: Must take all courses

Note: Can take BIOE 448 terer. Plant Ecology OR FORS 330 Forest Ecology OR NRSM 462 Range Ecology

	Course	**Credits**
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 447 - Terrestrial Ecosystem Ecology Offered intermittently. Prereq., BIOB 160N and any ecology-themed course or consent of instr. Introduction to systems thinking and the ecosystem concept, review of water and energy balance, carbon cycling and production processes, nutrient cycling, trophic dynamics, and species effects on ecosystem functioning.	3 Credits

	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Restoration Terrestrial Electives

Rule: Must take as least 9 credits

Note: No Double Dipping with CORE courses

	Course	Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 416 - Alpine Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Distribution, abundance and life cycles of plants and animals and their unique ecophysiological adaptations to life in the rigorous environments of the high mountains above the timberline, with emphasis on the Crown of the Continent area.	3 Credits
	BIOE 448 - Terrestrial Plant Ecology Offered alternate autumn. Prereq. BIOB 272N. The interrelationships between plants and plant communities and their natural environment.	4 Credits
	BIOE 451 - Landscape Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Biophysical processes that determine landscape and ecosystem structure and function using remote sensing tools, geographic information systems and dynamic models to demonstrate landscape change.	3 Credits
	BIOE 458 - Forest and Grassland Ecol Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Patterns and processes of the forests and grasslands of the northern Rocky Mountains in the context of principles of population community and ecosystem ecology.	3 Credits
	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits

	FORS 202 - Forest Mensuration Offered spring. Prereq., FORS 201 or STAT 216 or SOCI 202 or WILD 240; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. The theory and practice of timber inventory and growth projection, including field measurements, sampling procedures, statistical methods, inventory compilation, and stand growth simulation under specified management prescriptions. Stand growth under specified management prescriptions.	3 Credits
	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 333 - Basic&Applied Fire Ecology Offered spring. Prereq., FORS 230. A detailed, analysis of fire ecology in terrestrial ecosystems with a focus on the Rocky Mountains, including fire history, fire effects, landscape pattern, land use legacies, and management implications.	3 Credits
	FORS 347 - Multiple Resource Silviculture Offered spring. Prereq., FORS 330 or BIOE 370. Credit not allowed for both FORS 347 and 349. An introduction to the concepts and application of silvicultural techniques to forest ecosystems to meet multiple resource objectives.	3 Credits
	GEO 228 - Earth Surface Processes Spring semester. Prereq. GEO 101N-102N, M 121 and 122 or M 151. Introduction to the physical processes that affect the surface of the Earth, including global-scale energy distribution and balance, the hydrologic cycle, climate, weathering, transport mechanisms, and geomorphic processes.	2 Credits
	NRSM 408 - Global Cycles and Climate Offered spring even-numbered years. Same as CCS 408. An analysis of the earths major global biogeochemical cycles with a focus on the ways and extent to which each of them influences and interacts with the global climate system.	3 Credits
	NRSM 418 - Ecosystem Climatology Interactions between the biosphere and atmosphere to advanced undergraduate students and graduate students. This course will explore the interactions between Earth's biosphere and atmosphere and how they affect climate over a range of scales. We will focus on the exchange of energy, mass, and important elements between the biosphere and atmosphere and how this exchange can lead to fascinating feedbacks in Earth's climate system. Basic physics and math is not required but it is recommended.	3 Credits

Minimum Required Grade: C-	9 Total Credits Required

Restoration Social Science Elective Courses

Rule: Must take at least 3 credits

	Course	Credits
	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits
	FORS 320 - Forest Environmental Economics Offered autumn. Prereq., ECNS 201S; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. Economic techniques to support decision making about the allocation of scarce resources, and management of forests for timber and other ecosystem services.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Writing Required for the Major

Rule: Must complete the following subcategories

15 Total Credits Required

> *Lower Division Writing*

Rule: must take the following courses

	Course	Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Writing

Rule: Must take at least three courses

	Course	Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits

	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 444 - Ecological RestorationCapstone Offered spring. Prereq., junior or senior standing in Wildland Restoration and successful completion of NRSM 265 and one advanced ecology course: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462; and completion or concurrent enrollment in NRSM 365. This service-learning course teaches students about designing and implementing restoration and monitoring projects. The course includes lectures, labs, and hands-on experience working with ecologists and restoration practitioners from local government agencies, NGOs, or other organizations.	5 Credits
	NRSM 495 - Ecological Restor Practicum (R-6) Offered every semester. Prereq., senior standing in the Ecological Resotration major and successful completion of NRSM 344, a faculty-approved practicum proposal; and consent of instructor. The goal of this service-learning practicum is for students to gain real-world experience in research, monitoring, or project implementation. Students will implement a project under the supervision of faculty and mentors from local management agencies, organizations or other sponsors.	3 To 6 Credits
	NRSM 499 - Senior Thesis (R-3) Offered autumn and spring. Prereq., senior standing and consent of instr. Preparation of a major paper based on study or research in a field selected according to the needs and objectives of the student.	1 To 3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Math requirement for major

Rule: Must take all courses

	Course	Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		4 Total Credits Required

Symbolic Systems

Rule: Must take one of the following courses

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WILD 240 - Intro to Biostatistics Offered autumn. Prereq., calculus and consent of instr. Introduction to statistical ecology: distributions, hypothesis testing, and fitting models to data with emphasis on problems in ecological sampling.	3 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Expressive Arts Requirement for Major

Rule: must take one of the following course

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Scicnes

Rule: May take the below course

	Course	Credits
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Ethical & Human Values Elective within Major

Rule: must take one of the following course

	Course	Credits
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences within Major

Rule: Must take all courses

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
Minimum Required Grade: C-		7 Total Credits Required

Ecological Restoration Minor

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 24
Required Cumulative GPA: 2.0

Major Required Course

Rule: must take the following course
Note: FORS 201 can be substituted for either STATS 216 Into to Statistics OR WILD 240 Into to Biostatistics

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
	NRSM 265 - Elements of Ecological Restora Offered autumn. Prereq., one course in the ecological or biological sciences: BIOO 105N, BIOB 160N, BIOB 170N, BIOB 172, BIOE 370, BIOE 428, BIOE 447 or BIOE 448; or FORS 330; or NRSM 271N or NRSM 462 or consent of instructor. Overview of the natural and social science elements of ecological restoration, including the ecological foundations of restoration, practices used to restore terrestrial and aquatic habitats, philosophical and ethical challenges involved, and current initiatives in Montana and the United States. Includes Saturday field trips.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Required Courses

Rule: Must complete all of the following courses

Note: FORS 330 can be substituted for either BIOE 370 Genera Ecology OR BIOE 428 Freshwater Ecology OR NRSM 462 Range Ecology;
NRSM 385 can be substituted for BIOO 335 Rocky Mountain Flora

	Course	Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	NRSM 465 - Restoration Ecology Offered spring. Prereq., graduate or junior or senior standing and NRSM 265 and one 300-400 level ecology courses: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462; or consent of instructor. This course covers the primary ecological theories that inform the practice of ecological restoration. Topics include the dynamic nature of ecological systems, community assembly, biodiversity and ecosystem functioning, food web dynamics, ecological engineering, macroecology, and statistical issues and study design.	3 Credits
Minimum Required Grade: C-		9 Total Credits Required

Natural Science Electives

Rule: Must take one of the following courses, but not a course already used for a core or above requirement

	Course	Credits
	BIOE 342 - Field Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOB 272 and one year of college math, including statistics. The principles and practices of the study of animals and plants in their natural environments, including human influences, with focus on the Crown of the Continent area of the Rock Mountains and taught entirely outdoors.	5 Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits

	BIOE 416 - Alpine Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Distribution, abundance and life cycles of plants and animals and their unique ecophysiological adaptations to life in the rigorous environments of the high mountains above the timberline, with emphasis on the Crown of the Continent area.	3 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOE 439 - Stream Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N. The biota and biogeochemical processes of running waters with unifying principles and contemporary research approaches.	3 Credits
	BIOE 448 - Terrestrial Plant Ecology Offered alternate autumn. Prereq. BIOB 272N. The interrelationships between plants and plant communities and their natural environment.	4 Credits
	BIOE 451 - Landscape Ecology Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Biophysical processes that determine landscape and ecosystem structure and function using remote sensing tools, geographic information systems and dynamic models to demonstrate landscape change.	3 Credits
	BIOE 453 - Ecology of Small & Large Lakes Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371, CHMY 121N and CHMY 123N. The physical, chemical and biological characteristics of lake ecosystems with an emphasis on nutrient cycling, food web interactions and water quality.	3 Credits
	BIOE 458 - Forest and Grassland Ecol Offered summers only at Flathead Lake Biological Station. Prereq., BIOE 342 or BIOE 370/371. Patterns and processes of the forests and grasslands of the northern Rocky Mountains in the context of principles of population community and ecosystem ecology.	3 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	BIOO 340 - Biology and Mgmnt of Fishes Offered autumn. Prereq., BIOB 272 and either STAT 216 or WILD 240. Diversity, adaptations and ecology of fishes. Analysis and management of fish populations and communities.	4 Credits
	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits

	FORS 202 - Forest Mensuration Offered spring. Prereq., FORS 201 or STAT 216 or SOCI 202 or WILD 240; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. The theory and practice of timber inventory and growth projection, including field measurements, sampling procedures, statistical methods, inventory compilation, and stand growth simulation under specified management prescriptions. Stand growth under specified management prescriptions.	3 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 331 - Wildland Fuel Management Offered autumn. Prereq., FORS 230 or consent of instr. The fire ecology of some western vegetation types is discussed. Elements of the principles of wildland fuel management are presented. Prescribed fire use and mechanical manipulation are matched to historic ecosystem processes. Smoke management considerations and health issues are also presented.	3 Credits
	FORS 333 - Basic&Applied Fire Ecology Offered spring. Prereq., FORS 230. A detailed, analysis of fire ecology in terrestrial ecosystems with a focus on the Rocky Mountains, including fire history, fire effects, landscape pattern, land use legacies, and management implications.	3 Credits
	FORS 347 - Multiple Resource Silviculture Offered spring. Prereq., FORS 330 or BIOE 370. Credit not allowed for both FORS 347 and 349. An introduction to the concepts and application of silvicultural techniques to forest ecosystems to meet multiple resource objectives.	3 Credits
	GEO 228 - Earth Surface Processes Spring semester. Prereq. GEO 101N-102N, M 121 and 122 or M 151. Introduction to the physical processes that affect the surface of the Earth, including global-scale energy distribution and balance, the hydrologic cycle, climate, weathering, transport mechanisms, and geomorphic processes.	2 Credits
	GEO 420 - Hydrogeology Offered spring. Prereq., GEO 101N-102N; PHSX 205N/206N or PHSX 215N/216N ; M 162 or 171 strongly recommended or consent of instr. Occurrence, movement, quality, and methods of quantification of groundwater. Geological framework and physics of groundwater flow. Supply, contamination, and management problems.	4 Credits
	GEO 460 - Process Geomorphology Offered autumn. Prereq., one semester college calculus and physics. Quantitative examination of landforms, runoff generation, weathering, mechanics of soil erosion by water and wind, mass wasting, glacial and periglacial processes and hillslope evolution.	4 Credits

	NRSM 335 - Environmental Entomology Offered autumn odd years. An introduction to the importance of insects in ecosystem function and process, and their use in ecological monitoring as indicators of ecological change, degradation, and the efficacy of ecological restoration efforts. This course also covers the effects of climate change and biological invasions in the context of both pest and beneficial insect species.	3 Credits
	NRSM 360 - Rangeland Mgt (equiv 260) Offered autumn. Prereq., junior standing or consent of instr. An introduction to rangelands and their management, grazing influences, class of animal, grazing capacity, control of livestock distribution, improvements, competition and interrelationships with wildlife. Laboratory exercises to gain on-site experience on topics and concepts presented in lectures.	3 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	NRSM 408 - Global Cycles and Climate Offered spring even-numbered years. Same as CCS 408. An analysis of the earths major global biogeochemical cycles with a focus on the ways and extent to which each of them influences and interacts with the global climate system.	3 Credits
	NRSM 415 - Environmental Soil Science Offered spring odd-numbered years Prereq., ENSC 245N or NRSM 210N or consent of instr. A detailed analysis of the physical, chemical and biological properties of soils and how they function, with a focus on soil processes and how they affect, and are affected by human activities. Specific topics include element cycling, water quality, the effects of environmental change soil biogeochemistry, plant-soil interactions, and the consequences of large-scale disturbances on soil processes.	3 Credits
	NRSM 418 - Ecosystem Climatology Interactions between the biosphere and atmosphere to advanced undergraduate students and graduate students. This course will explore the interactions between Earth's biosphere and atmosphere and how they affect climate over a range of scales. We will focus on the exchange of energy, mass, and important elements between the biosphere and atmosphere and how this exchange can lead to fascinating feedbacks in Earth's climate system. Basic physics and math is not required but it is recommended.	3 Credits
	NRSM 455 - Riparian Ecology & Management Offered intermittently. Prereqs., successful completion or concurrent enrollment in NRSM 385 and completion of one of the following introductory ecology courses: BIOE 172, BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462. Importance of riparian/wetland areas and the complexities associated with their management for short and long term benefits.	3 Credits

	NRSM 462 - Rangeland Ecology Offered spring. NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172N or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. We will discuss the ecological principles and processes that drive the structure and function of rangeland ecosystems. We will focus on the intersections of plant, animal, ecosystem, and landscape ecology. We will weave in discussions of management to understand how rangeland dynamics contribute and respond to differing management paradigms.	3 Credits
	NRSM 485 - Watershed Management Offered intermittently. Prereq., NRSM 385 or consent of instr. Effects of land management practices on water and sediment yields from wildland watersheds. Introduction to statistical methods in hydrology. Introduction to water yield and sediment modeling techniques.	3 Credits
	WILD 470 - Conserv of Wildlife Populatns Offered autumn and spring. Prereq., BIOE 370, M 162 or M 171, and senior standing in Biology, Forestry, Resource Conservation, Recreation Management or Wildlife Biology. Application of population ecology principles and theory to the conservation and management of wildlife populations.	3 Credits
	WILD 491 - Special Topics (R-12) Offered intermittently. Experimental offerings of visiting professors, new courses, or one-time offerings of current topics.	1 To 12 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science Electives

Rule: take at least one course from the following, but if one of these courses are required for the major a second elective must be taken

	Course	**Credits**
	ECNS 433 - Economics of the Environment Offered intermittently. Prereq., ECNS 201S. Outlines a theoretical framework for the analysis of environmental problems, including concepts of market failure and externalities, materials balance and property rights. The policy implications of this analytical model are explored for a range of topics including pollution and the preservation of natural environments and species. Formally cross-listed with EVST 440.	3 Credits
	FORS 320 - Forest Environmental Economics Offered autumn. Prereq., ECNS 201S; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. Economic techniques to support decision making about the allocation of scarce resources, and management of forests for timber and other ecosystem services.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits

	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
Minimum Required Grade: C-		3-6 Total Credits Required

Ethical & Human Values Elective within Minor

Rule: Can take the elective courses

Note: can take these courses for Social Science Electives in the minor and will work for this General Education Requirement

	Course	**Credits**
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits

	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences within Minor

Rule: must take the following course

	Course	Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Parks, Tourism, and Recreation Management

The B.S. in Parks, Tourism & Recreation Management degree is designed to prepare students for professional positions developing and managing nature-based recreation experiences and park resources for public land management agencies, nonprofit organizations, and the nature-based tourism industry. Students pursuing this degree must choose between an option in Recreation Resources Management or Nature-Based Tourism. The Recreation Resources Management option provides the educational background necessary for evaluating and managing wild lands to protect their recreational, heritage, and ecological values. The Nature-Based Tourism option is designed to combine an understanding of social, cultural, political, environmental, and economic contexts surrounding tourism in a natural resource setting. All students learn the processes and conceptual skills needed to determine alternative management strategies, make management decisions, and carry out management programs. Included are courses leading to an understanding of the basic ecological characteristics of recreational lands. Students also take courses dealing with human behavior and management. Emphasis is placed on presenting problems that would be encountered while managing national parks and forests, state and regional parks, wilderness areas, and other recreation resources of international and national significance.

Department Faculty

Professor

Bill Borrie, Professor of Park and Recreation Management
Wayne Freimund, Professor, Parks and Protected Area Management

Norma Nickerson, Research Professor; Director of ITRR

Associate Professor

Keith Bosak, Associate Professor of Nature Based Tourism and Recreation
Elizabeth Covelli Metcalf, Associate Professor of Recreation Management & Human Dimensions of Natural Resources; Undergraduate Program Director, PTRM

Assistant Professor

Jennifer Thomsen, Assistant Professor of Park, Recreation, and Tourism Management

Emeritus

Steve McCool, Professor Emeritus of Wildland Recreation Management

Parks, Tourism, and Recreation Management B.S.

The B.S. in Parks, Tourism & Recreation Management degree is designed to prepare students for professional positions developing and managing nature-based recreation experiences and park resources for public land management agencies, nonprofit organizations, and the nature-based tourism industry. Students pursuing this degree must choose between an option in Recreation Resources Management or Nature-Based Tourism. The Recreation Resources Management option provides the educational background necessary for evaluating and managing wild lands to protect their recreational, heritage, and ecological values. The Nature-Based Tourism option is designed to combine an understanding of social, cultural, political, environmental, and economic contexts surrounding tourism in a natural resource setting. All students learn the processes and conceptual skills needed to determine alternative management strategies, make management decisions, and carry out management programs. Included are courses leading to an understanding of the basic ecological characteristics of recreational lands. Students also take courses dealing with human behavior and management. Emphasis is placed on presenting problems that would be encountered while managing national parks and forests, state and regional parks, wilderness areas, and other recreation resources of international and national significance.

Bachelor of Science - Parks, Tourism &Rec Management

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 75

Required Cumulative GPA: 2.0

Note: There are no longer "degree options". Students can design their own elective choices with an advisor.

Major Required Courses

Rule: Must take all courses

	Course	Credits
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits

	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
	PTRM 210S - Nature Tourism & Comm Rec Offered autumn. Introduction to the tourism and commercial recreation industries. Provides initial link between the natural environment and business operations. Combination of introductory business philosophies, economics, and natural resource management into a framework for future reference and course work.	3 Credits
	PTRM 217S - Wildland Recreation Management Offered autumn and spring. The management of land as an environment for outdoor recreation. Understanding the relationship between the visitor, resource base and management policies. Recreation planning on multiple use forest lands, parks, wilderness areas and private lands.	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Outside Major Required Courses

Rule: Must take all courses

Note: Can take SOCI 202 Social Statistics OR FORS 201 Biometrics in place of STATS 216; Can take THTR 120A Intro to Acting in place of COMX 111A; can take BIOE 172 Into to Ecology OR BIOO 105 Botany in place of BIOB 170

	Course	**Credits**
	ACTG 201 - Principles of Fin Acct Offered every term. Prereq. or Coreq. M 115, M 121, M 151 or M 162. Introduction to financial accounting concepts, including transactions analysis, financial statement analysis, and corporate financial reporting practices.	3 Credits
	ACTG 202 - Principles of Mang Acct Offered every term. Prereq., ACTG 201 and M 115, M 121, M 151 or M 162. Continuation of ACTG 201 with a focus on managerial accounting topics.	3 Credits

	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		29 Total Credits Required

Major Required Courses

Rule: Must take all courses

Note: Can take WILD 410 Wildlife Policy & Biopolitics in place of NRSM 422; Can take NRSM 462 Range Ecology in place of FORS 330; Can take PTRM 451 Tourism & Sustainability in place of PTRM 482.
In addition to the above requirements, students are also required to take at least 3 credits of skills classes. Students can choose from: ECP 120/121 Emergency Care Provider and lab (3)cr., NRSM 379 Collaboration (3)cr., BKMT 325, Principles of Marketing (3)cr., or FORS 250 Introduction to GIS. Alternatively, students can take two

semesters of a foreign language.

	Course	Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
	PTRM 310 - Nat Res Interp and Comm Offered autumn. Prereq., COMX 111A or THTR 120A, junior or senior standing in PTRM or RECM. Principles, concepts, techniques essential to providing high quality interpretive programs in natural or cultural history.	3 Credits
	PTRM 380 - Rec Admin & Leadership Offered spring. The theories, principles and practices that shape the administration of recreation opportunities offered through public, nonprofit and private agencies and organizations. Course content includes leadership roles of recreation managers, organizational structure, management, legality, risk management, staffing, communication and public relations.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
	PTRM 484 - PTRM Field Measurement Tech Offered autumn. Co-req. with either PTRM 485 or PTRM 451. Field measurement and management techniques critical in park, tourism & recreation management. Includes measurement of impacts on biophysical and social attributes of park, tourism & recreation settings.	3 Credits
	PTRM 485 - Recreation Planning Offered spring. Prereq., PTRM 217S and PTRM 300. Offered autumn. Needs of recreation opportunities and response to those needs through planning, demand assessment and resource analysis.	3 Credits

	PTRM 495 - Practicum in PTRM (R-15) Offered every term. Prereq., PTRM 380, PTRM 450, senior standing, and consent of instr. Supervised pre-professional practice in approved parks, tourism & recreation management agencies.	1 To 6 Credits
Minimum Required Grade: C-		28 Total Credits Required

Writing Within Major

Rule: Must complete the following subcategories

9 Total Credits Required

Lower Division Writing

Rule: Must take all courses

	Course	Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Writing

Rule: Must take one of the following courses

	Course	Credits

	PTRM 451 - Tourism & Sustainability Offered spring. Prereq., PTRM 210, or consent of instructor. Theories and conceptual models are applied to analyzing relationships between the integration of planning theories to sustainability concepts.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Math within Major

Rule: Must take all courses

	Course	Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
Minimum Required Grade: C		3 Total Credits Required

Symbolic Systems

Rule: Must take at least one of the following courses

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits

Minimum Required Grade: C-	3-4 Total Credits Required

Expressive Arts Requirement

Rule: must take one of the following courses

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science within Major

Rule: must take the following course

	Course	Credits
	PTRM 217S - Wildland Recreation Management Offered autumn and spring. The management of land as an environment for outdoor recreation. Understanding the relationship between the visitor, resource base and management policies. Recreation planning on multiple use forest lands, parks, wilderness areas and private lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethical & Human Values Elective within Major

Rule: CAN take the elective course

	Course	Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences within Major

Rule: Must take NRSM 210 and one of the biology courses

	Course	Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits
	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits

	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		29 Total Credits Required

Major Required Courses

Rule: Must take all courses

Note: Can take WILD 410 Wildlife Policy & Biopolitics in place of NRSM 422; Can take NRSM 462 Range Ecology in place of FORS 330; Can take PTRM 451 Tourism & Sustainability in place of PTRM 482.
In addition to the above requirements, students are also required to take at least 3 credits of skills classes. Students can choose from: ECP 120/121 Emergency Care Provider and lab (3)cr., NRSM 379 Collaboration (3)cr., BKMT 325, Principles of Marketing (3)cr., or FORS 250 Introduction to GIS. Alternatively, students can take two semesters of a foreign language.

	Course	Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
	PTRM 310 - Nat Res Interp and Comm Offered autumn. Prereq., COMX 111A or THTR 120A, junior or senior standing in PTRM or RECM. Principles, concepts, techniques essential to providing high quality interpretive programs in natural or cultural history.	3 Credits
	PTRM 380 - Rec Admin & Leadership Offered spring. The theories, principles and practices that shape the administration of recreation opportunities offered through public, nonprofit and private agencies and organizations. Course content includes leadership roles of recreation managers, organizational structure, management, legality, risk management, staffing, communication and public relations.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits

	PTRM 484 - PTRM Field Measurement Tech Offered autumn. Co-req. with either PTRM 485 or PTRM 451. Field measurement and management techniques critical in park, tourism & recreation management. Includes measurement of impacts on biophysical and social attributes of park, tourism & recreation settings.	3 Credits
	PTRM 485 - Recreation Planning Offered spring. Prereq., PTRM 217S and PTRM 300. Offered autumn. Needs of recreation opportunities and response to those needs through planning, demand assessment and resource analysis.	3 Credits
	PTRM 495 - Practicum in PTRM (R-15) Offered every term. Prereq., PTRM 380, PTRM 450, senior standing, and consent of instr. Supervised pre-professional practice in approved parks, tourism & recreation management agencies.	1 To 6 Credits
Minimum Required Grade: C-		28 Total Credits Required

Recreation Resource Management Track

Rule: Can take these track courses

Note: Courses are not required in this track - please talk to a faculty advisor on what classes will be best for your area of interest.

	Course	**Credits**
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	COMX 421 - Comm in Non-Profit Organizatns Offered yearly. Focuses on issues in nonprofit organizational communication at macro and micro levels. Topics include: organizational identity, change processes, public relations, fund-raising, advocacy, socialization, stress and burnout, board management and professionalization.	3 Credits
	FORS 230 - Forest Fire Management Offered spring. Fire as an ecological factor in Western forests is presented. Fire weather, the measurement of fire weather, and the factors of fuel, weather and topography that influence fire behavior, and fire management decisions are included. NFDRS, state and national fire policy evolutions are discussed. Basic fire suppression tactics are also presented.	2 Credits
	FORS 240 - Tree Biology Offered autumn and spring. Suggested coreq., FORS 241N. The physical and biological requirements for the growth and development of trees. Discussions of: identification, classification, range, and economic importance of the major tree species of North America.	2 Credits
	FORS 241N - Dendrology Offered autumn and spring. Suggested coreq., FORS 240. Methods and techniques for identifying the major families of North American trees, based on gross morphological and anatomical features. Building and use of identification keys.	3 Credits

	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	FORS 331 - Wildland Fuel Management Offered autumn. Prereq., FORS 230 or consent of instr. The fire ecology of some western vegetation types is discussed. Elements of the principles of wildland fuel management are presented. Prescribed fire use and mechanical manipulation are matched to historic ecosystem processes. Smoke management considerations and health issues are also presented.	3 Credits
	FORS 333 - Basic&Applied Fire Ecology Offered spring. Prereq., FORS 230. A detailed, analysis of fire ecology in terrestrial ecosystems with a focus on the Rocky Mountains, including fire history, fire effects, landscape pattern, land use legacies, and management implications.	3 Credits
	FORS 347 - Multiple Resource Silviculture Offered spring. Prereq., FORS 330 or BIOE 370. Credit not allowed for both FORS 347 and 349. An introduction to the concepts and application of silvicultural techniques to forest ecosystems to meet multiple resource objectives.	3 Credits
	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits
	NRSM 265 - Elements of Ecological Restora Offered autumn. Prereq., one course in the ecological or biological sciences: BIOO 105N, BIOB 160N, BIOB 170N, BIOB 172, BIOE 370, BIOE 428, BIOE 447 or BIOE 448; or FORS 330; or NRSM 271N or NRSM 462 or consent of instructor. Overview of the natural and social science elements of ecological restoration, including the ecological foundations of restoration, practices used to restore terrestrial and aquatic habitats, philosophical and ethical challenges involved, and current initiatives in Montana and the United States. Includes Saturday field trips.	3 Credits

	NRSM 335 - Environmental Entomology Offered autumn odd years. An introduction to the importance of insects in ecosystem function and process, and their use in ecological monitoring as indicators of ecological change, degradation, and the efficacy of ecological restoration efforts. This course also covers the effects of climate change and biological invasions in the context of both pest and beneficial insect species.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
	PTRM 150 - Current Issues in PTRM Offered autumn. This course will explore issues related to recreation and tourism in western Montana. This is a field based course designed to get students outside the classroom. Students will have a chance to visit outdoor recreation areas and meet recreation and tourism managers.	1 Credits
Minimum Required Grade: C-		

Writing Within Major

Rule: Must complete the following subcategories

9 Total Credits Required

Lower Division Writing

Rule: Must take all courses

	Course	Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits

	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Writing

Rule: Must take one of the following courses

	Course	Credits
	PTRM 451 - Tourism & Sustainability Offered spring. Prereq., PTRM 210, or consent of instructor. Theories and conceptual models are applied to analyzing relationships between the integration of planning theories to sustainability concepts.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Math within Major

Rule: Must take all courses

	Course	Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits

Minimum Required Grade: C	3 Total Credits Required

Symbolic Systems

Rule: Must take at least one of the following courses

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Expressive Arts Requirement

Rule: must take one of the following courses

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science within Major

Rule: must take the following course

	Course	Credits

	PTRM 217S - Wildland Recreation Management Offered autumn and spring. The management of land as an environment for outdoor recreation. Understanding the relationship between the visitor, resource base and management policies. Recreation planning on multiple use forest lands, parks, wilderness areas and private lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethical & Human Values Elective within Major

Rule: CAN take the elective course

	Course	Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences within Major

Rule: Must take NRSM 210 and one of the biology courses

	Course	Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits
	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Nature Based Tourism

Bachelor of Science - Parks, Tourism &Rec Management; Track: Nature-Based Tourism

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 75

Required Cumulative GPA: 2.0

Note: There are no longer "degree options". This track allows students to work with a faculty advisor to select elective courses that will be more specific to their career choices.

Major Required Courses

Rule: Must take all courses

	Course	**Credits**
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
	PTRM 210S - Nature Tourism & Comm Rec Offered autumn. Introduction to the tourism and commercial recreation industries. Provides initial link between the natural environment and business operations. Combination of introductory business philosophies, economics, and natural resource management into a framework for future reference and course work.	3 Credits
	PTRM 217S - Wildland Recreation Management Offered autumn and spring. The management of land as an environment for outdoor recreation. Understanding the relationship between the visitor, resource base and management policies. Recreation planning on multiple use forest lands, parks, wilderness areas and private lands.	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Outside Major Required Courses

Rule: Must take all courses

Note: Can take SOCI 202 Social Statistics OR FORS 201 Biometrics in place of STATS 216; Can take THTR 120A Intro to Acting in place of COMX 111A

	Course	**Credits**
	ACTG 201 - Principles of Fin Acct Offered every term. Prereq. or Coreq. M 115, M 121, M 151 or M 162. Introduction to financial accounting concepts, including transactions analysis, financial statement analysis, and corporate financial reporting practices.	3 Credits
	ACTG 202 - Principles of Mang Acct Offered every term. Prereq., ACTG 201 and M 115, M 121, M 151 or M 162. Continuation of ACTG 201 with a focus on managerial accounting topics.	3 Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits

	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		29 Total Credits Required

Major Required Courses

Rule: Must take all courses

Note: null

Note: Can take WILD 410 Wildlife Policy & Biopolitics in place of NRSM 422; Can take NRSM 462 Range Ecology in place of FORS 330; Can take PTRM 451 Tourism & Sustainability in place of PTRM 482
In addition to the above requirements, students are also required to take at least 3 credits of skills classes. Students can choose from: ECP 120/121 Emergency Care Provider and lab (3)cr., NRSM 379 Collaboration (3)cr., BKMT 325, Principles of Marketing (3)cr., or FORS 250 Introduction to GIS. Alternatively, students can take two semesters of a foreign language.

	Course	Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
	PTRM 310 - Nat Res Interp and Comm Offered autumn. Prereq., COMX 111A or THTR 120A, junior or senior standing in PTRM or RECM. Principles, concepts, techniques essential to providing high quality interpretive programs in natural or cultural history.	3 Credits
	PTRM 380 - Rec Admin & Leadership Offered spring. The theories, principles and practices that shape the administration of recreation opportunities offered through public, nonprofit and private agencies and organizations. Course content includes leadership roles of recreation managers, organizational structure, management, legality, risk management, staffing, communication and public relations.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
	PTRM 484 - PTRM Field Measurement Tech Offered autumn. Co-req. with either PTRM 485 or PTRM 451. Field measurement and management techniques critical in park, tourism & recreation management. Includes measurement of impacts on biophysical and social attributes of park, tourism & recreation settings.	3 Credits
	PTRM 485 - Recreation Planning Offered spring. Prereq., PTRM 217S and PTRM 300. Offered autumn. Needs of recreation opportunities and response to those needs through planning, demand assessment and resource analysis.	3 Credits

	PTRM 495 - Practicum in PTRM (R-15) Offered every term. Prereq., PTRM 380, PTRM 450, senior standing, and consent of instr. Supervised pre-professional practice in approved parks, tourism & recreation management agencies.	1 To 6 Credits
Minimum Required Grade: C-		28 Total Credits Required

Nature Based Tourism Recommended Electives

Rule: Can take these track courses

Note: Courses are not required in this track - please talk to a faculty advisor on what classes will be best for your area of interest.

	Course	Credits
	ANTY 101H - Anthro & the Human Experience Offered autumn and spring. Offered intermittently in summer. A survey of anthropology which introduces the fundamental concepts, methods and perspectives of the field. The description and analysis of human culture, its growth and change. The nature and functions of social institutions.	3 Credits
	BMKT 325 - Principles of Marketing Offered autumn and spring. Prereq., junior standing in Business. The marketing environment, product, price, distribution, and promotion strategies including government regulation and marketing ethics.	3 Credits
	BMKT 337 - Consumer Behavior Offered autumn and spring. Prereq., junior standing in Business and BMKT 325; PSYX 100S and 230S recommended. A behavioral analysis of consumer decision making and of the factors influencing consumer decisions, i.e., those decisions directly involved with the obtaining of economic goods and services.	3 Credits
	COMX 220S - Intro to Organizational Comm Offered yearly. Theory and research on communication in organizations. Focus on topics such as productivity, power, culture, socialization, technology and globalization covering a wide range of organizations including corporations, government, educational institutions, non-profit agencies and media organizations.	3 Credits
	COMX 351 - Principles of Public Relations Offered yearly. The many uses of communication in the endeavor of public relations. Communication theories and models including interpersonal communication, organizational communication, and mass communication are applied to explore the internal and external communication behavior associated with public relations.	3 Credits
	ECNS 202S - Principles of Macroeconomics Offered every term. Prereq., ECNS 201S. The determination of the level of national economic activity, inflation, economic instability, the role of money and financial institutions, and selected topics in public economic policy.	3 Credits

	FORS 202 - Forest Mensuration Offered spring. Prereq., FORS 201 or STAT 216 or SOCI 202 or WILD 240; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. The theory and practice of timber inventory and growth projection, including field measurements, sampling procedures, statistical methods, inventory compilation, and stand growth simulation under specified management prescriptions. Stand growth under specified management prescriptions.	3 Credits
	FORS 320 - Forest Environmental Economics Offered autumn. Prereq., ECNS 201S; and M 121 and M 122 or M 151 or M 162 or M 171 or M 172. Economic techniques to support decision making about the allocation of scarce resources, and management of forests for timber and other ecosystem services.	3 Credits
	FORS 351 - Env Remote Sensing Offered spring. The theory and application of photo- and electro-optical remote sensing for mapping resources and developing information systems.	3 Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits
	GPHY 111N - Intro to Physical Geography Offered autumn and spring. Introduction to the earth's major natural environmental systems, their spatial distribution and interrelationships, including weather and climate, vegetation and ecosystems, soils, landforms, and earth-surface processes.	3 Credits
	GPHY 311N - Biogeography Offered intermittently. Changing patterns of plant and animal distributions in space and time. Combination of historical and ecological approaches to biological species and communities. Study of external causes of plant and animal distributions, especially climatic change and human impacts.	3 Credits
	GPHY 433 - Cultural Ecology Offered most springs. Prereq., WRIT 101 or WRIT 201 and one Intermediate Writing Course or Consent of Instructor. Examines issues related to culture and the natural environment. Topics include cultural origins and diversity, geography of religion, geolinguistics, plant and animal domestication, livelihood systems, folk and popular culture, ethnic geography, political patterns, demography, industries, urban genesis, and the transformation of environmental systems.	3 Credits
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits

	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
	PHL 112E - Intro Ethics and Environment Offered intermittently. An introductory-level ethics course with a special interest in the natural environment. The course will (a) introduce students to the three classical traditions in ethics - virtue, Kantianism, and utilitarianism, (b) ground these theories in questions about the moral status of non-humans and our moral duties to non-humans, (c) include an applied section that covers animal welfare, biotechnology, and other current topics.	3 Credits
	PTRM 150 - Current Issues in PTRM Offered autumn. This course will explore issues related to recreation and tourism in western Montana. This is a field based course designed to get students outside the classroom. Students will have a chance to visit outdoor recreation areas and meet recreation and tourism managers.	1 Credits
Minimum Required Grade: C-

Outdoor Recreation Services

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track.

Bachelor of Science - Parks, Tourism &Rec Management; Track: Outdoor Recreation Services

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 75

Required Cumulative GPA: 2.0

Note: There are no longer "degree options". Students can design their own elective choices with an advisor.

Major Required Courses

Rule: Must take all courses

	Course	**Credits**
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits

	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
	PTRM 210S - Nature Tourism & Comm Rec Offered autumn. Introduction to the tourism and commercial recreation industries. Provides initial link between the natural environment and business operations. Combination of introductory business philosophies, economics, and natural resource management into a framework for future reference and course work.	3 Credits
	PTRM 217S - Wildland Recreation Management Offered autumn and spring. The management of land as an environment for outdoor recreation. Understanding the relationship between the visitor, resource base and management policies. Recreation planning on multiple use forest lands, parks, wilderness areas and private lands.	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Outside Major Required Courses

Rule: Must take all courses

Note: Can take SOCI 202 Social Statistics OR FORS 201 Biometrics in place of STATS 216; Can take THTR 120A Intro to Acting in place of COMX 111A; can take BIOE 172 Into to Ecology OR BIOO 105 Botany in place of BIOB 170

	Course	**Credits**
	ACTG 201 - Principles of Fin Acct Offered every term. Prereq. or Coreq. M 115, M 121, M 151 or M 162. Introduction to financial accounting concepts, including transactions analysis, financial statement analysis, and corporate financial reporting practices.	3 Credits
	ACTG 202 - Principles of Mang Acct Offered every term. Prereq., ACTG 201 and M 115, M 121, M 151 or M 162. Continuation of ACTG 201 with a focus on managerial accounting topics.	3 Credits

	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	PSYX 100S - Intro to Psychology Offered every term. Introduction to the scientific study of behavior in humans and other animals. Credit not allowed for both PSY 100S and PSYC 100S.	4 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		29 Total Credits Required

Major Required Courses

Rule: Must take all courses

Note: Can take WILD 410 Wildlife Policy & Biopolitics in place of NRSM 422; Can take NRSM 462 Range Ecology in place of FORS 330; Can take PTRM 451 Tourism & Sustainability in place of PTRM 482
In addition to the above requirements, students are also required to take at least 3 credits of skills classes. Students can choose from: ECP 120/121 Emergency Care Provider and lab (3)cr., NRSM 379 Collaboration (3)cr., BKMT 325, Principles of Marketing (3)cr., or FORS 250 Introduction to GIS. Alternatively, students can take two semesters of a foreign language.

	Course	Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
	PTRM 310 - Nat Res Interp and Comm Offered autumn. Prereq., COMX 111A or THTR 120A, junior or senior standing in PTRM or RECM. Principles, concepts, techniques essential to providing high quality interpretive programs in natural or cultural history.	3 Credits
	PTRM 380 - Rec Admin & Leadership Offered spring. The theories, principles and practices that shape the administration of recreation opportunities offered through public, nonprofit and private agencies and organizations. Course content includes leadership roles of recreation managers, organizational structure, management, legality, risk management, staffing, communication and public relations.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
	PTRM 484 - PTRM Field Measurement Tech Offered autumn. Co-req. with either PTRM 485 or PTRM 451. Field measurement and management techniques critical in park, tourism & recreation management. Includes measurement of impacts on biophysical and social attributes of park, tourism & recreation settings.	3 Credits
	PTRM 485 - Recreation Planning Offered spring. Prereq., PTRM 217S and PTRM 300. Offered autumn. Needs of recreation opportunities and response to those needs through planning, demand assessment and resource analysis.	4 Credits

	PTRM 495 - Practicum in PTRM (R-15) Offered every term. Prereq., PTRM 380, PTRM 450, senior standing, and consent of instr. Supervised pre-professional practice in approved parks, tourism & recreation management agencies.	1 To 6 Credits
Minimum Required Grade: C-		28 Total Credits Required

Outdoor Recreation Services

Rule: Can take these track courses

Note: Courses are not required in this track - please talk to a faculty advisor on what classes will be best for your area of interest.

	Course	Credits
	BMGT 401 - Event Management Offered autumn. Prereq., junior standing; open to non-business majors. Students are introduced to skills that are necessary for managing entertainment events. Topics include: market research; artist research; negotiating events; producing live events; and working with community and non-profit organizations. Students will develop and participate in several live events throughout the semester.	3 Credits
	COMX 115S - Intro to Interpersonal Communc Offered autumn and spring. An overview of the process of human communication with special emphasis on analyzing communication patterns and improving interpersonal communication skills. Credit not allowed for both COMM 110S and COM 150S.	3 Credits
	COMX 220S - Intro to Organizational Comm Offered yearly. Theory and research on communication in organizations. Focus on topics such as productivity, power, culture, socialization, technology and globalization covering a wide range of organizations including corporations, government, educational institutions, non-profit agencies and media organizations.	3 Credits
	COMX 421 - Comm in Non-Profit Organizatns Offered yearly. Focuses on issues in nonprofit organizational communication at macro and micro levels. Topics include: organizational identity, change processes, public relations, fund-raising, advocacy, socialization, stress and burnout, board management and professionalization.	3 Credits
	ENST 225 - Community & Enviornment Offered autumn. Same as SOCI 225. Exploration of the ways that communities address their environmental concerns. Introduction of relevant social science concepts.	3 Credits
	ENST 230H - Nature and Society UM campus course offered spring. Explores the relationship between ideas about nature and the development of political and social ideas, institutions, and practices, primarily in western (Euro-American) society. Complements ethics offerings in philosophy aimed at environmental studies majors.	3 Credits

	GPHY 121S - Human Geography Offered autumn and spring. Introduction to Human Geography focuses upon the linkages between geography and society including analysis of regions, ethnic groups, urban landscapes, migration and population change, geopolitics, economics, and cultural differences.	3 Credits
	HEE 233 - Health Issues Child/Adol Offered every term. Overview of current health issues affecting children and adolescents. Focus is on educational and preventive measures that can be implemented by teachers and schools through comprehensive school health education programs.	3 Credits
	NASX 180 - Event Planning Offered spring semester. This course is intended for students to learn the skills necessary to put on a large event. The course is intended as a hands-on experiential learning course. The culmination of the course will be putting on the annual Kyi-Yo contest pow-wow, the first large regional pow-wow of the year on the circuit.	3 Credits
	NRSM 121S - Nature of Montana Offered autumn. An exploration of the major natural resource management issues facing the people of Montana and the social processes to manage environmental conflicts. Provides an introduction to the function of ecological systems and the impacts of human uses on the environment and looks at strategies for addressing global climate change, ex-urban population growth, and protecting environmental quality.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	PSCI 460 - Exp Offering: Public Admin (R-9) Offered intermittently. Prereq., junior standing. Experimental or onetime offerings in the subfield of public administration or policy.	1 To 9 Credits
	PSCI 467 - Adv Nonprofit Adm Offered spring. Prereq., PSCI 466. In-depth exploration of the special issues related to nonprofit management including fund raising, budgeting, and program planning.	3 Credits
	PTRM 150 - Current Issues in PTRM Offered autumn. This course will explore issues related to recreation and tourism in western Montana. This is a field based course designed to get students outside the classroom. Students will have a chance to visit outdoor recreation areas and meet recreation and tourism managers.	1 Credits
	S W 300 - Hum Behav & Soc Environ Offered autumn and spring. Prereq., SW 100 and 200, and junior standing in Social Work. Using the ecological-social systems framework, the integration of knowledge and concepts from the social and behavioral sciences for analysis and assessment of problems and issues relevant to professional social work practice.	3 Credits

	SOCI 308 - Soc of Education Offered intermittently. Prereq., SOCI 101S. The structure and operation of the educational system in the United States, with special attention to the organization and effectiveness of schools.	3 Credits
	SOCI 342 - Urban/Metropolital Soc Offered intermittently. Prereq., SOCI 101S. Classical social theories of urban growth. Contemporary urbanization in local, regional, national and global contexts. Internal urban/metropolitan social organization in terms of race, ethnicity, social class and gender.	3 Credits
	SOCI 346 - Rural Sociology Offered intermittently. Prereq., SOCI 101S recommended. Demographic, economic and sociocultural change in rural communities with an emphasis on global economy, political structure, urbanization, and economic and social infrastructure. Special attention given to the rural west and Montana.	3 Credits
	SOCI 350 - The Community Offered intermittently. Prereq., SOCI 101S. The study of families, peer groups, neighborhoods, voluntary associations, power structures, social classes and large scale organizations as they come together in local communities.	3 Credits
Minimum Required Grade: C-		

Writing Within Major

Rule: Must complete the following subcategories

9 Total Credits Required

Lower Division Writing

Rule: Must take all courses

	Course	Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits

	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Upper Division Writing

Rule: Must take one of the following courses

	Course	Credits
	PTRM 451 - Tourism & Sustainability Offered spring. Prereq., PTRM 210, or consent of instructor. Theories and conceptual models are applied to analyzing relationships between the integration of planning theories to sustainability concepts.	3 Credits
	PTRM 482 - Wilderness & Protctd Area Mgt Offered spring. Prereq., PTRM 217S, or consent of instructor. Examination of the origin, evolution, and application of the park concept on state, federal, and international levels. Evaluation of legislation, philosophy, and policy leading to consideration of goals, objectives, and strategies for wilderness and protected area management.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Math within Major

Rule: Must take all courses

	Course	Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits

Minimum Required Grade: C	3 Total Credits Required

Symbolic Systems

Rule: Must take at least one of the following courses

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Expressive Arts Requirement

Rule: must take one of the following courses

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science within Major

Rule: must take the following course

	Course	Credits

	PTRM 217S - Wildland Recreation Management Offered autumn and spring. The management of land as an environment for outdoor recreation. Understanding the relationship between the visitor, resource base and management policies. Recreation planning on multiple use forest lands, parks, wilderness areas and private lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethical & Human Values Elective within Major

Rule: CAN take the elective course

	Course	Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences within Major

Rule: Must take NRSM 210 and one of the biology courses

	Course	Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits
	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Resource Conservation

Laurie Yung, Associate Professor, Resource Conservation Program Director

The challenging and rapidly evolving field of environmental conservation requires broad training and the ability to integrate and communicate across disciplines. Resource Conservation is an interdepartmental undergraduate major that prepares students for the diverse opportunities that now exist in environmental conservation, natural resource management, and sustainable livelihoods and communities. Students can choose a more structured area of study in the natural sciences, such as ecology or hydrology, or emphasize emerging sub-disciplines such as wildland fire management, natural resource economics, or climate and environmental change. Students can also integrate across disciplines and focus on environmental policy and natural resources planning, wilderness studies, sustainable livelihoods and community conservation, or international conservation. For more information on different curricular tracks within the Resource Conservation major, please see: www.cfc.umt.edu/rc. In addition to degree requirements listed below, students selecting the Bachelor of Science in Resource Conservation should contact their faculty advisor to approve their curriculum.

Department Faculty

Professor

Jill M. Belsky, Professor of Rural & Environmental Sociology; Chair, Department of Society & Conservation
Martin Nie, Professor, Natural Resource Policy; Director, Bolle Center for People & Forests
Stephen F. Siebert, Professor of Tropical Forest Conservation & Management

Associate Professor

Keith Bosak, Associate Professor of Nature Based Tourism and Recreation
Dane Scott, Associate Professor of Ethics; Director of the Center for Ethics
Carl Seielstad, Associate Research Professor; Fire/Fuels Program Manager, National Center for Landscape Fire Analysis
Laurie Yung, Associate Professor of Natural Resource Social Science; Undergraduate Program Director, Resource Conservation

Assistant Professor

Brady Allred, Assistant Professor of Rangeland Ecology
Brian Chaffin, Assistant Professor of Water Policy
Andrew Larson, Associate Professor of Forest Ecology
Alexander L. Metcalf, Research Assistant Professor

Emeritus

Paul Alaback, Professor Emeritus of Forest Ecology

Resource Conservation B.S.

Laurie Yung, Associate Professor, Resource Conservation Program Director

The challenging and rapidly evolving field of environmental conservation requires broad training and the ability to integrate and communicate across disciplines. Resource Conservation is an interdepartmental undergraduate major that prepares students for the diverse opportunities that now exist in environmental conservation, natural resource management, and sustainable livelihoods and communities. Students can choose a more structured area of study in the natural sciences, such as ecology or hydrology, or emphasize emerging sub-disciplines such as wildland fire management, natural resource economics, or climate and environmental change. Students can also integrate across disciplines and focus on environmental policy and natural resources planning, wilderness studies, sustainable livelihoods and community conservation, or international conservation. Bachelor of Science - Resource Conservation

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 43

Required Cumulative GPA: 2.0

Professional Writing

Rule: Must take the following course

	Course	Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Chemistry

Rule: Must take the following course

Note: null

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Quantitative and Spatial Analysis

Rule: Must take three of the following courses and one must be a statistics course (FORS 201, STAT 216 or SOCI 202)

Note: FORS 250 is highly recommended
Can take STAT 216 Statistics or SOCI 202 Social Statistics in place of FORS 201

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits
	M 122 - College Trigonometry Offered autumn and spring. Prereq., M 121 or ALEKS placement >= 4. Preparation for calculus based on college algebra. Review of functions and their inverses. Trigonometric functions and identities, polar coordinates and an optional topic such as complex numbers, vectors or parametric equations. Credit not allowed for both M 122 and M 151.	3 Credits
	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits

	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		9 Total Credits Required

Biology

Rule: Must take one couse from below

	Course	Credits
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits
	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Communication

Rule: Must take one course from below

	Course	Credits

	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Physical Science

Rule: Must take the following course

	Course	Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ecology

Rule: Must take one course from below

	Course	Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits

	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	NRSM 462 - Rangeland Ecology Offered spring. NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172N or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. We will discuss the ecological principles and processes that drive the structure and function of rangeland ecosystems. We will focus on the intersections of plant, animal, ecosystem, and landscape ecology. We will weave in discussions of management to understand how rangeland dynamics contribute and respond to differing management paradigms.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Policy

Rule: Must take one course from below

	Course	**Credits**
	NRSM 370S - Wildland Conserv Pol/Govrnance Offered autumn and spring. Examination of the historical, philosophical, and legislative background for development and management of our national system of wilderness areas, wild and scenic rivers, trails, and national parks; their place in our social structure. Part of the Wilderness and Civilization program.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	WILD 410 - Wildlife Policy & Biopolitics Offered spring, odd years. Prereq., junior standing. Overview of the laws affecting wildlife and how those laws are initiated, implemented, and enforced; impact of politics, interest groups, and agency jurisdictions.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science

Rule: Must take one course from below

	Course	**Credits**

	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 424 - Community Forestry & Conservtn Offered spring. Co-convened with NRSM 524. In-depth examination of the history, theory and management issues faced in community-driven forestry and conservation in the United States and abroad. Cannot get credit for both NRSM 424 and NRSM 524.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethics

Rule: Must take one course from below

	Course	**Credits**
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Additional Required Courses

Rule: Must take at least 36 traditional letter-graded credits from the College of Forestry and Conservation (NRSM, WILD, FORS, PTRM, CCS 103, CCS 352, CCS 391)

Note: In addition to the above requirements, Resource Conservation students are also required to take at least 10 additional credits in their area of emphasis. Students can choose courses from the following prefixes: BIOO, BIOE, CHMY, ENSC, FORS, GEOS, M, NRSM, PHSX, and WILD. Alternatively, students can take two semesters of a foreign language (or otherwise demonstrate foreign language proficiency).
All students must take at least 49 approved credits in the major.
Students double majoring with Resource Conservation and Ecological Restoration, Forestry, Wildlife Biology, and Parks, Tourism and Recreation Management must take an additional 9.0 credits in FORS, NRSM, PTRM, and WILD in addition to courses required by either of their majors. These additional 9.0 credits will be relevant to the student's track/emphasis with the major.

Minimum Required Grade: C-

Writing

Rule: Must take both lower-division courses (WRIT 101 and NRSM 200) and at least 3 courses at the upper-division level listed below

Note: The following courses count for the entire upper-division writing requirement (only one course is required): PTRM 451W Tourism and Sustainability, PTRM 482W Wilderness and Protected Area Mgmt.

	Course	Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 341 - Timber Harvesting & Roads Offered spring. Prereq., NRSM 200 or WRIT 222. An overview of harvesting system capabilities and selection for multiple resource objectives. Fundamentals of forest road management. Best management practices as they apply to forest operations in Montana and the western United States.	3 Credits
	FORS 347 - Multiple Resource Silviculture Offered spring. Prereq., FORS 330 or BIOE 370. Credit not allowed for both FORS 347 and 349. An introduction to the concepts and application of silvicultural techniques to forest ecosystems to meet multiple resource objectives.	3 Credits

	FORS 349 - Practice of Silviculture Offered autumn. Prereq., FORS 202 or FORS 302 and FORS 241N and either prereq or coreq FORS 330. Practice of Silviculture is designed primarily for Forestry majors (open to others with appropriate prerequisites), and will consider the conceptual foundations behind various silvicultural practices and techniques, as well as and their application in forest ecosystems to meet multiple resource objectives. The course will cover natural stand dynamics, stand assessment and site classification schemes, even- and uneven-aged silvicultural systems, thinning/stand density concepts, regeneration practices, stand diagnosis and prescription development, vegetative management strategies for diverse objectives, along with quantitative assessment and modeling of alternative prescriptions.	3 Credits
	FORS 440 - Forest Stand Management Offered autumn. Prereq., FORS 202 or 302; FORS 341; FORS 347 or 349. The management and manipulation of forest stands to reach multiple objectives, with a focus on the planning of forest operations for a community partner.	3 Credits
	FORS 499 - Senior Thesis Offered autumn and spring. Prereq., senior standing and consent of instr. Preparation of a major paper based on study or research in a field selected according to the needs and objectives of the student.	1 To 3 Credits
	NASX 403 - Contmp Tribal Resource Issues Offered intermittently. Acquaints students with contemporary tribal resource management and environmental policies.	3 Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 444 - Ecological RestorationCapstone Offered spring. Prereq., junior or senior standing in Wildland Restoration and successful completion of NRSM 265 and one advanced ecology course: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462; and completion or concurrent enrollment in NRSM 365. This service-learning course teaches students about designing and implementing restoration and monitoring projects. The course includes lectures, labs, and hands-on experience working with ecologists and restoration practitioners from local government agencies, NGOs, or other organizations.	5 Credits

	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 462 - Rangeland Ecology Offered spring. NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172N or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. We will discuss the ecological principles and processes that drive the structure and function of rangeland ecosystems. We will focus on the intersections of plant, animal, ecosystem, and landscape ecology. We will weave in discussions of management to understand how rangeland dynamics contribute and respond to differing management paradigms.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
	NRSM 495 - ESR Practicum (R-6) Offered every semester. Prereq., senior standing in the Ecological Resotration major and successful completion of NRSM 344, a faculty-approved practicum proposal; and consent of instructor. The goal of this service-learning practicum is for students to gain real-world experience in research, monitoring, or project implementation. Students will implement a project under the supervision of faculty and mentors from local management agencies, organizations or other sponsors.	1 To 6 Credits
	NRSM 499 - Senior Thesis (R-3) Offered autumn and spring. Prereq., senior standing and consent of instr. Preparation of a major paper based on study or research in a field selected according to the needs and objectives of the student.	1 To 3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits

	WILD 410 - Wildlife Policy & Biopolitics Offered spring, odd years. Prereq., junior standing. Overview of the laws affecting wildlife and how those laws are initiated, implemented, and enforced; impact of politics, interest groups, and agency jurisdictions.	3 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Math

Rule: Must take one course from below

	Course	Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits
	M 122 - College Trigonometry Offered autumn and spring. Prereq., M 121 or ALEKS placement >= 4. Preparation for calculus based on college algebra. Review of functions and their inverses. Trigonometric functions and identities, polar coordinates and an optional topic such as complex numbers, vectors or parametric equations. Credit not allowed for both M 122 and M 151.	3 Credits

	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Symbolic System

Rule: Must take one course from below

	Course	**Credits**
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Expressive Arts

Rule: Must take the one course from below

Note: null

	Course	**Credits**

	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethical & Human Values

Rule: Must take one course from below

	Course	Credits
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences in Major

Rule: Must take all courses

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Climate & Environment

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track.

Bachelor of Science - Resource Conservation; Track: Climate & Environmental Change

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 43

Required Cumulative GPA: 2.0

Note: More detailed information about the Climate & Environmental Change track can be found on our website: www.cfc.umt.edu/rc. Students in this track typically complete the Climate Change Minor (www.cfc.umt.edu/ccs). Please talk with your faculty advisor about which courses to take in this track.

Professional Writing

Rule: Must take the following course

	Course	**Credits**
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Chemistry

Rule: Must take the following course

Note: null

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Quantitative and Spatial Analysis

Rule: Must take three of the following courses and one must be a statistics course (FORS 201, STAT 216 or SOCI 202)

Note: FORS 250 is highly recommended
Can take STAT 216 Statistics or SOCI 202 Social Statistics in place of FORS 201

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits
	M 122 - College Trigonometry Offered autumn and spring. Prereq., M 121 or ALEKS placement >= 4. Preparation for calculus based on college algebra. Review of functions and their inverses. Trigonometric functions and identities, polar coordinates and an optional topic such as complex numbers, vectors or parametric equations. Credit not allowed for both M 122 and M 151.	3 Credits

	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		9 Total Credits Required

Biology

Rule: Must take one course from below

	Course	**Credits**
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits
	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Communications

Rule: Must take one course from below

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Physical Science

Rule: Must take the following course

	Course	Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ecology

Rule: Must take one course from below

	Course	Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits

	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	NRSM 462 - Rangeland Ecology Offered spring. NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172N or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. We will discuss the ecological principles and processes that drive the structure and function of rangeland ecosystems. We will focus on the intersections of plant, animal, ecosystem, and landscape ecology. We will weave in discussions of management to understand how rangeland dynamics contribute and respond to differing management paradigms.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Policy

Rule: Must take one course from below

	Course	**Credits**
	NRSM 370S - Wildland Conserv Pol/Govrnance Offered autumn and spring. Examination of the historical, philosophical, and legislative background for development and management of our national system of wilderness areas, wild and scenic rivers, trails, and national parks; their place in our social structure. Part of the Wilderness and Civilization program.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	WILD 410 - Wildlife Policy & Biopolitics Offered spring, odd years. Prereq., junior standing. Overview of the laws affecting wildlife and how those laws are initiated, implemented, and enforced; impact of politics, interest groups, and agency jurisdictions.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science

Rule: Must take one course from below

	Course	**Credits**

	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 424 - Community Forestry & Conservtn Offered spring. Co-convened with NRSM 524. In-depth examination of the history, theory and management issues faced in community-driven forestry and conservation in the United States and abroad. Cannot get credit for both NRSM 424 and NRSM 524.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethics

Rule: Must take one course from below

	Course	Credits
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Additional Coursework

Rule: Must take at least 36 traditional letter-graded credits from the College of Forestry and Conservation (NRSM, WILD, FORS, PTRM, CCS 103, CCS 352, CCS 391)

Note: Must take 10 credits of foreign language, unless a student tests out of one or more semester, OR 9.0 credits additional coursework in natural resource management, environmental science, or conservation relevant to the student's track/emphasis within the major (these 9.0 credits are in addition to the 36 traditional letter-graded College of Forestry and Conservation credits described just above.
Students double majoring with Resource Conservation and Ecological Restoration, Forestry, Wildlife Biology, and Parks, Tourism and Recreation Management must take an additional 9.0 credits in FORS, NRSM, PTRM, and WILD in addition to courses required by either of their majors. These additional 9.0 credits will be relevant to the student's track/emphasis with the major.

Minimum Required Grade: C-

Climate & Environmental Change

Rule: Can take these track courses

Note: More detailed information about the Climate & Environmental Change track can be found on our website: www.cfc.umt.edu/rc. Students in this track typically complete the Climate Change Minor (www.cfc.umt.edu/ccs). Please talk with your faculty advisor about which courses to take in this track.

	Course	Credits
	CCS 103X - Intro Climate Change:Sci & Soc Offered autumn. This is an introductory and foundational course on the scientific and social dimensions of global climate change. The goal of this course is to provide students with a basic understanding of the fundamental scientific, social, political and technological issues arising from rapid climatic change. As a result, it provides students with a breadth of knowledge and builds connectedness across these varied dimensions of the complex global issue.	3 Credits
	CCS 352 - Climate Field Studies Offered summer. This is an interdisciplinary field course focused on climate change impacts and adaptation. Through site visits and meetings with key decision-makers, students gain knowledge of projected impacts due to climate change (water availability, wildfire, beetle kill, biodiversity), the impacts to various sectors of human society (land management, food and water security, economic stability, and livelihoods), and different mitigation and adaptation responses.	3 Credits
	CCS 398 - Clmt Change Internship/SERV (R-6) Offered autumn and spring. This course gives students an opportunity to gain hands-on, "real world" experience working with a local, regional, national or international group to address climate change. Students gain supervised, practical work experience with specific projects and organizations; create a network of professional contacts; and have opportunity to apply ideas and approaches studied in the Climate Change Studies minor.	2 To 4 Credits

	COMX 349 - Comm Consump & Climate Offered every other year. Same as CCS 349. Analyzes consumption as a communication practice, investigates discourses that promote consumption, and illuminates environmental impacts on consumption.	3 Credits
	ECNS 445 - Int Env Econ & Clim Change Offered autumn every other year. Same as CCS 445. Prereq., ECNS 201S. An introduction to the economics of various policy approaches towards climate change and other international environmental issues such as trans-boundary pollution problems, international trade and the environment and pollution haven hypothesis.	3 Credits
	FORS 232 - Forest Insects & Diseases Offered spring. Identification, significance of and remedies for insect infestations and infectious and non-infectious diseases of forests and forest products.	2 Credits
	FORS 333 - Basic&Applied Fire Ecology Offered spring. Prereq., FORS 230. A detailed, analysis of fire ecology in terrestrial ecosystems with a focus on the Rocky Mountains, including fire history, fire effects, landscape pattern, land use legacies, and management implications.	3 Credits
	GPHY 335 - Water Policy Offered autumn. Prereq., WRIT 101 or WRIT 201, and one Intermedite Writing Course or consent of instructor. Exploration of water resources issues facing the public, resource managers, and water users in the western United States today. Examines concepts, terms, and regulatory environment which provide the foundation for modern water management and policy.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	NRSM 408 - Global Cycles and Climate Offered spring even-numbered years. Same as CCS 408. An analysis of the earths major global biogeochemical cycles with a focus on the ways and extent to which each of them influences and interacts with the global climate system.	3 Credits
	NRSM 415 - Environmental Soil Science Offered spring odd-numbered years Prereq., ENSC 245N or NRSM 210N or consent of instr. A detailed analysis of the physical, chemical and biological properties of soils and how they function, with a focus on soil processes and how they affect, and are affected by human activities. Specific topics include element cycling, water quality, the effects of environmental change soil biogeochemistry, plant-soil interactions, and the consequences of large-scale disturbances on soil processes.	3 Credits

	NRSM 418 - Ecosystem Climatology Interactions between the biosphere and atmosphere to advanced undergraduate students and graduate students. This course will explore the interactions between Earth's biosphere and atmosphere and how they affect climate over a range of scales. We will focus on the exchange of energy, mass, and important elements between the biosphere and atmosphere and how this exchange can lead to fascinating feedbacks in Earth's climate system. Basic physics and math is not required but it is recommended.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	PSCI 324 - Climate Policies: China & U.S. Offered every other year. Same as CCS 324. Explores historic, current, and future greenhouse-gas emissions of the United States and China, reasons why both are the two largest C02 emitters, and prevailing national and subnational government policies and nongovernmental actions that affect emissions mitigation and adaptation.	3 Credits
Minimum Required Grade: C-		49 Total Credits Required

Writing

Rule: Must take both lower-division courses (WRIT 101 and NRSM 200) and at least 3 courses at the upper-division level listed below

Note: The following courses count for the entire upper-division writing requirement (only one course is required): PTRM 451W Tourism and Sustainability, PTRM 482W Wilderness and Protected Area Mgmt.

	Course	**Credits**
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits

	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 341 - Timber Harvesting & Roads Offered spring. Prereq., NRSM 200 or WRIT 222. An overview of harvesting system capabilities and selection for multiple resource objectives. Fundamentals of forest road management. Best management practices as they apply to forest operations in Montana and the western United States.	3 Credits
	FORS 342 - Wood Anatomy, Properties, & ID Offered spring. Prereq., BIOO 105N or FORS 240 or FORS 241N. Lecture and laboratory investigation of the structure, identification and physical and mechanical properties of the commercial tree species of North America.	3 Credits
	FORS 347 - Multiple Resource Silviculture Offered spring. Prereq., FORS 330 or BIOE 370. Credit not allowed for both FORS 347 and 349. An introduction to the concepts and application of silvicultural techniques to forest ecosystems to meet multiple resource objectives.	3 Credits
	FORS 349 - Practice of Silviculture Offered autumn. Prereq., FORS 202 or FORS 302 and FORS 241N and either prereq or coreq FORS 330. Practice of Silviculture is designed primarily for Forestry majors (open to others with appropriate prerequisites), and will consider the conceptual foundations behind various silvicultural practices and techniques, as well as and their application in forest ecosystems to meet multiple resource objectives. The course will cover natural stand dynamics, stand assessment and site classification schemes, even- and uneven-aged silvicultural systems, thinning/stand density concepts, regeneration practices, stand diagnosis and prescription development, vegetative management strategies for diverse objectives, along with quantitative assessment and modeling of alternative prescriptions.	3 Credits
	FORS 440 - Forest Stand Management Offered autumn. Prereq., FORS 202 or 302; FORS 341; FORS 347 or 349. The management and manipulation of forest stands to reach multiple objectives, with a focus on the planning of forest operations for a community partner.	3 Credits
	FORS 499 - Senior Thesis Offered autumn and spring. Prereq., senior standing and consent of instr. Preparation of a major paper based on study or research in a field selected according to the needs and objectives of the student.	1 To 3 Credits
	NASX 403 - Contmp Tribal Resource Issues Offered intermittently. Acquaints students with contemporary tribal resource management and environmental policies.	3 Credits

	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 444 - Ecological RestorationCapstone Offered spring. Prereq., junior or senior standing in Wildland Restoration and successful completion of NRSM 265 and one advanced ecology course: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462; and completion or concurrent enrollment in NRSM 365. This service-learning course teaches students about designing and implementing restoration and monitoring projects. The course includes lectures, labs, and hands-on experience working with ecologists and restoration practitioners from local government agencies, NGOs, or other organizations.	5 Credits
	NRSM 462 - Rangeland Ecology Offered spring. NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172N or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. We will discuss the ecological principles and processes that drive the structure and function of rangeland ecosystems. We will focus on the intersections of plant, animal, ecosystem, and landscape ecology. We will weave in discussions of management to understand how rangeland dynamics contribute and respond to differing management paradigms.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
	NRSM 495 - ESR Practicum (R-6) Offered every semester. Prereq., senior standing in the Ecological Resotration major and successful completion of NRSM 344, a faculty-approved practicum proposal; and consent of instructor. The goal of this service-learning practicum is for students to gain real-world experience in research, monitoring, or project implementation. Students will implement a project under the supervision of faculty and mentors from local management agencies, organizations or other sponsors.	1 To 6 Credits

	NRSM 499 - Senior Thesis (R-3) Offered autumn and spring. Prereq., senior standing and consent of instr. Preparation of a major paper based on study or research in a field selected according to the needs and objectives of the student.	1 To 3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
	WILD 410 - Wildlife Policy & Biopolitics Offered spring, odd years. Prereq., junior standing. Overview of the laws affecting wildlife and how those laws are initiated, implemented, and enforced; impact of politics, interest groups, and agency jurisdictions.	3 Credits
	WRIT 101 - College Writing I UM: Offered every term. Prereq., WRIT 095 or proof of passing score on writing diagnostic examination, referral by WRIT 095 instructor-SAT writing score at or above 440, MUSWA at or above 3.5, SAT/ACT essay score at or above 7, or ACT Combined English/Writing score at or above 18. Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Credit not allowed for both WRIT 101 and COM 101. Grading A-F, or NC (no credit). MC: Offered every term. Prereq., WRIT 095 or proof of appropriate SAT/ACT essay, English/Writing, writing section scores, appropriate MUSWA scores, or proof of passing scores on Writing Placement Exam). Expository prose and research paper; emphasis on structure, argument, development of ideas, clarity, style, and diction. Students expected to write without major faults in grammar or usage. Grading A-F, or NC (no credit).	3 Credits
Minimum Required Grade: C-		15 Total Credits Required

Math

Rule: Must take one course from below

	Course	**Credits**
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits

	M 122 - College Trigonometry Offered autumn and spring. Prereq., M 121 or ALEKS placement >= 4. Preparation for calculus based on college algebra. Review of functions and their inverses. Trigonometric functions and identities, polar coordinates and an optional topic such as complex numbers, vectors or parametric equations. Credit not allowed for both M 122 and M 151.	3 Credits
	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Symbolic System

Rule: Must take one course from below

	Course	**Credits**
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	SOCI 202 - Social Statistics Offered every term. Prereq., M 115, Sociology majors only, or consent of instr. Application of descriptive and inferential statistical techniques to sociological data. Required of all majors.	3 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Expressive Arts

Rule: Must take one course from below

Note: null

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethical & Human Values

Rule: Must take one course from below

	Course	Credits
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Natural Sciences in Major

Rule: Must take all courses

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits

	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		6 Total Credits Required

Ecology of Terrestrial Ecosystems

This is an advising track only and not an official program as recognized by the University of Montana (UM) or the Montana University System. This information will not appear on your UM transcript, diploma, university lists, student data system, or university publication. You do not fill out a major change for a track.

Bachelor of Science - Resource Conservation; Track: Ecology of Terrestrial Ecosystems

College of Forestry & Conserv

Catalog Year: 2016-2017

Degree Specific Credits: 43

Required Cumulative GPA: 2.0

Note: More detailed information about Ecology of Terrestrial Ecosystems track can be found on our website: www.cfc.umt.edu/rc. Please talk with your faculty advisor about which courses to take in this track.

Professionla Writing

Rule: Must take the following course

	Course	**Credits**
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Chemistry

Rule: Must take the following course

Note: null

	Course	Credits
	CHMY 121N - Intro to General Chemistry Offered autumn and spring. First semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Quantitative and Spatial Analysis

Rule: Must take three of the following courses and one must be a statistics course (FORS 201, STAT 216 or SOCI 202)

Note: Can take STAT 216 Statistics or SOCI 202 Social Statistics in place of FORS 201.

	Course	Credits
	FORS 201 - Forest Biometrics Offered autumn. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. Introduction to probability and statistical methods for forestry and environmental sciences covering natural resource applications of common probability distributions, data analysis, hypothesis testing, and regression.	3 Credits
	FORS 250 - Intro to GIS for Forest Mgt Offered every term. Open to sophomores or juniors or with consent of instructor. This course is designed as a practical introduction to the use of Geographic Information Systems (GIS) for storing, retrieving, analyzing and displaying spatial data. It will also cover the history of cartography and the conventions of the modern map-making process.	3 Credits
	M 115 - Probability and Linear Math Offered every term. Prereq. M 090 with a grade of B- or better, or M 095, or ALEKS placement >= 3, or ACT score of 22, or SAT score of 520. Systems of linear equations and matrix algebra. Introduction to probability with emphasis on models and probabilistic reasoning. Examples of applications of the material in many fields.	3 Credits
	M 121 - College Algebra Offered autumn and spring. Prereq., M 095 or ALEKS placement >= 4. Intended to strengthen algebra skills. The study of functions and their inverses; polynomial, rational, exponential, and logarithmic functions. Credit not allowed for both M 121, and M 151.	3 Credits
	M 122 - College Trigonometry Offered autumn and spring. Prereq., M 121 or ALEKS placement >= 4. Preparation for calculus based on college algebra. Review of functions and their inverses. Trigonometric functions and identities, polar coordinates and an optional topic such as complex numbers, vectors or parametric equations. Credit not allowed for both M 122 and M 151.	3 Credits

	M 151 - Precalculus Offered autumn and spring. Prereq., ALEKS placement >= 4. A one semester preparation for calculus (as an alternative to M 121-122. Functions of one real variable are introduced in general and then applied to the usual elementary functions, namely polynomial and rational functions, exponential and logarithmic functions, trigonometric functions, and miscellaneous others. Inverse functions, polar coordinates and trigonometric identities are included. Credit not allowed for both M 151 and M 121 or 122.	4 Credits
	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
Minimum Required Grade: C-		9 Total Credits Required

Biology

Rule: Must take one course from below

	Course	**Credits**
	BIOB 160N - Principles of Living Systems Offered autumn and summer. Unifying principles of biological structure-function relationships at different levels of organization and complexity. Consideration of reproduction, genetics, development, evolution, ecosystems, as well as the inter-relationships of the human species to the rest of life. Students requiring a laboratory should also register for BIOB 161N. Credit not allowed for both BIOB 101N and 160N.	3 Credits
	BIOB 161N - Prncpls of Living Systems Lab Offered autumn and summer. Prereq., or Coreq., BIOB 160N. Lab experiences illustrate biological principles underlying growth, reproduction, development, genetics and physiology, and are designed to give students practice in scientific methods of description, development of hypotheses, and testing.	1 Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOE 172N - Introductory Ecology Offered autumn. An introduction to ecological principles, stressing the structure and function of natural communities and examining human's role in these ecosystems.	3 Credits
	BIOO 105N - Introduction to Botany Offered spring. Introduction to the plant kingdom including anatomy, physiology and ecology.	3 Credits
Minimum Required Grade: C-		3-4 Total Credits Required

Communications

Rule: Must take one course from below

	Course	Credits
	COMX 111A - Intro to Public Speaking Offered every term. Preparation, presentation, and criticism of speeches. Emphasis on the development of public speaking techniques through constructive criticism. Credit not allowed for both COMM 111A and COM 160A.	3 Credits
	THTR 120A - Introduction to Acting I Offered every term. An introduction to the skills and techniques required of the actor to be effective in communication with others on stage and off stage.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Physical Science

Rule: Must take the following course

	Course	Credits
	NRSM 210N - Soils, Water and Climate Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. The factors affecting earth's terrestrial ecosystems are rapidly changing, and understanding their impact on ecosystem services to humanity is becoming increasingly important and yet complex. In this course, students will explore how climate, water and soils interact to shape Earth's biosphere. We will introduce students to a number of fundamental concepts in climate, hydrology, and soil science to gain a comprehensive view of the factors that shape and affect all terrestrial ecosystems. Through a series of lectures and field-based laboratories, students will be introduced to the fundamental principles of climate and hydrology that influence soil development, how they vary across small spatial scales, and how these physical, chemical, and biological processes interact to affect soil development. Ultimately, this class will introduce students to intimate relationship between climate, water, and soils, and how they interact to affect patterns of vegetation we see across the biosphere.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ecology

Rule: Must take one course from below

	Course	Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits

	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	NRSM 462 - Rangeland Ecology Offered spring. NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172N or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. We will discuss the ecological principles and processes that drive the structure and function of rangeland ecosystems. We will focus on the intersections of plant, animal, ecosystem, and landscape ecology. We will weave in discussions of management to understand how rangeland dynamics contribute and respond to differing management paradigms.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Policy

Rule: Must take one course from below

	Course	Credits
	NRSM 370S - Wildland Conserv Pol/Govrnance Offered autumn and spring. Examination of the historical, philosophical, and legislative background for development and management of our national system of wilderness areas, wild and scenic rivers, trails, and national parks; their place in our social structure. Part of the Wilderness and Civilization program.	3 Credits
	NRSM 422 - Nat Res Policy/Administration Offered autumn and spring. Policy formation in the United States and a survey of the major resource policies interpreted in their historical and political contexts.	3 Credits
	WILD 410 - Wildlife Policy & Biopolitics Offered spring, odd years. Prereq., junior standing. Overview of the laws affecting wildlife and how those laws are initiated, implemented, and enforced; impact of politics, interest groups, and agency jurisdictions.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Social Science

Rule: Must take one course from below

	Course	Credits

	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 424 - Community Forestry & Conservtn Offered spring. Co-convened with NRSM 524. In-depth examination of the history, theory and management issues faced in community-driven forestry and conservation in the United States and abroad. Cannot get credit for both NRSM 424 and NRSM 524.	3 Credits
	NRSM 426 - Climate and Society Offered spring. Co-convened with NRSM 526. This course examines the social and political aspects of climate change, with a focus on international and domestic processes and cases. Cannot get credit for both NRSM 426 and NRSM 526.	3 Credits
	NRSM 475 - Environment & Development Offered spring. Co-convened with NRSM 575. Examines key social forces that influence how individuals, groups and nation-states understand and live within their bio-physical environments, especially policies and processes relating to development, corporate capitalism, globalization, culture, class and other forms of power and social relations. Pays close attention to ways both indigenous and introduced resource use and management practices (including conservation) variably impact people of different races, classes, genders, cultures and livelihood practices. Cannot get credit for both NRSM 475 and NRSM 575.	3 Credits
	PTRM 300 - Recreation Behavior Offere spring. Prereq., PTRM 217S. This course provides an understanding of recreation behavior in wildland and nature-based tourism oriented settings. Students will learn about theories/conceptual frameworks from social and environmental psychology and their application to visitor management issues in the wildland recreation and nature-base tourism fields.	3 Credits
Minimum Required Grade: C-		3 Total Credits Required

Ethics

Rule: Must take one course from below

	Course	**Credits**
	NRSM 449E - Climate Change Ethics/Policy Offered autumn. Same as CCS 449E. This course focuses on the ethical dimensions of climate change policy. It will cover the following major topics: (1) climate change, personal and collective responsibilities, (2) ethics, climate change and scientific uncertainty, (3) distributive justice and international climate change negotiations, (4) intergenerational justice and climate change policy.	3 Credits
	NRSM 489E - Ethics Forestry & Conservation Offered autumn. Prereq., junior or senior standing. Theoretical and practical ethical issues affecting the management of natural resources in national forests and on other public lands.	3 Credits

Minimum Required Grade: C-	3 Total Credits Required

Additional Coursework

Rule: Must take at least 36 traditional letter-graded credits from the College of Forestry and Conservation (NRSM, WILD, FORS, PTRM, CCS 103, CCS 352, CCS 391)

Note: Must take 10 credits of foreign language, unless a student tests out of one or more semester, OR 9.0 credits additional coursework in natural resource management, environmental science, or conservation relevant to the student's track/emphasis within the major (these 9.0 credits are in addition to the 36 traditional letter-graded College of Forestry and Conservation credits described just above.
Students double majoring with Resource Conservation and Ecological Restoration, Forestry, Wildlife Biology, and Parks, Tourism and Recreation Management must take an additional 9.0 credits in FORS, NRSM, PTRM, and WILD in addition to courses required by either of their majors. These additional 9.0 credits will be relevant to the student's track/emphasis with the major.

Minimum Required Grade: C-

Ecology of Terrestrial Ecosystems

Rule: Can take these track courses

Note: Suggested courses for Ecology of Terrestrial Ecosystems. Please see more detailed description of this track online and talk with your faculty advisor about which courses to take in this track.

	Course	Credits
	BIOB 170N - Princpls Biological Diversity Offered spring and summer. Survey of the diversity, evolution and ecology of life including prokaryotes, viruses, protista, fungi, plants and animals.	3 Credits
	BIOB 272 - Genetics and Evolution Offered spring. Prereq., either BIOB 260 OR both BIOB 160N and BIOB 170N/171N; and one of M 121, 122, 151, 162, or 171. Principles and mechanisms of inheritance and evolution. Population genetics, fossil record, macroevolution, speciation, extinction, systematics, molecular evolution.	4 Credits
	BIOB 480 - Conservation Genetics Offered intermittently. Prereq., BIOB 272. Genetic basis for solving biological problems in conservation including the genetics of small populations, the application of molecular genetic techniques to conservation biology and case studies of the application of genetics to conservation problems.	3 Credits
	BIOE 370 - General Ecology Offered autumn. Prereq., BIOB 272. Analysis of the distribution and abundance of plants and animals. Includes individual, population and community-level processes (e.g., population growth and regulation, competition, predation, succession, nutrient cycling, energy flow and community organization).	3 Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	BIOE 449 - Plant Biogeography Offered intermittently. Prereq., consent of instr. Description of the distribution of plants and animals at global, continental and regional scales. Analysis of ecological and historical factors influencing distribution and association.	3 Credits

	BIOO 320 - General Botany Offered autumn. Prereq., BIOB 170N-171N, 260. Prereq. or coreq., BIOB 272. Anatomy, morphology, ecology and physiology of photosynthetic organisms.	5 Credits
	BIOO 335 - Rocky Mountain Flora Offered spring. Prereq., one college-level course in Biology or consent of instr. Elements of the evolution, geography and natural affinities of flowering plants. Identification using a manual of native plants of Montana.	3 Credits
	BIOO 433 - Plant Physiology Offered spring. Prereq., BIOB 260 or consent of the instructor. The molecular, biochemical and biophysical basis of plant function, from the subcellular to the whole organism level.	3 Credits
	CHMY 123 - Intro to Organic & Biochem Offered autumn and spring. Prereq., "C-" or equiv. in CHMY 121N or CHMY 141N or consent of instr. Second semester of an introduction to general, inorganic, organic and biological chemistry.	3 Credits
	ECNS 201S - Principles of Microeconomics Offered every term. The nature of a market economy, economic decisions of the household and firm, competition and monopoly, value and price determination, distribution of income and applied microeconomic topics.	3 Credits
	FORS 240 - Tree Biology Offered autumn and spring. Suggested coreq., FORS 241N. The physical and biological requirements for the growth and development of trees. Discussions of: identification, classification, range, and economic importance of the major tree species of North America.	2 Credits
	FORS 241N - Dendrology Offered autumn and spring. Suggested coreq., FORS 240. Methods and techniques for identifying the major families of North American trees, based on gross morphological and anatomical features. Building and use of identification keys.	3 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 347 - Multiple Resource Silviculture Offered spring. Prereq., FORS 330 or BIOE 370. Credit not allowed for both FORS 347 and 349. An introduction to the concepts and application of silvicultural techniques to forest ecosystems to meet multiple resource objectives.	3 Credits
	GEO 101N - Intro to Physical Geology Offered autumn and spring. General geology including the work of wind, flowing water, glacial ice, gravity, earthquakes, volcanoes and plate tectonics in shaping the earth.	3 Credits

	M 162 - Applied Calculus Offered autumn and spring. Prereq., ALEKS placement >= 5 or one of M 121, 122 or 151. Introductory course surveying the principal ideas of differential and integral calculus with emphasis on applications and computer software. Mathematical modeling in discrete and continuous settings. Intended primarily for students who do not plan to take higher calculus.	4 Credits
	NRSM 265 - Elements of Ecological Restora Offered autumn. Prereq., one course in the ecological or biological sciences: BIOO 105N, BIOB 160N, BIOB 170N, BIOB 172, BIOE 370, BIOE 428, BIOE 447 or BIOE 448; or FORS 330; or NRSM 271N or NRSM 462 or consent of instructor. Overview of the natural and social science elements of ecological restoration, including the ecological foundations of restoration, practices used to restore terrestrial and aquatic habitats, philosophical and ethical challenges involved, and current initiatives in Montana and the United States. Includes Saturday field trips.	3 Credits
	NRSM 335 - Environmental Entomology Offered autumn odd years. An introduction to the importance of insects in ecosystem function and process, and their use in ecological monitoring as indicators of ecological change, degradation, and the efficacy of ecological restoration efforts. This course also covers the effects of climate change and biological invasions in the context of both pest and beneficial insect species.	3 Credits
	NRSM 365 - Foundations of Restoration Ec Offered spring. Prereq., junior or senior standing and NRSM 265 and one 300-400 level ecology courses: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462. This course covers the primary ecological theories that inform the practice of ecological restoration. Topics include the dynamic nature of ecological systems,community assembly, biodiversity and ecosystem functioning food web dynamics, ecological engineering, macroecology, and statistical issues and study design.	3 Credits
	NRSM 385 - Watershed Hydrology Offered autumn and spring. Prereq., M 115 or M 121 or M 122 or M 151 or M 162 or M 171 or M 172. An introduction to physical and biological controls over water movement and storage in the environment, and how those controls are affected by land management practices.	3 Credits
	NRSM 408 - Global Cycles and Climate Offered spring even-numbered years. Same as CCS 408. An analysis of the earths major global biogeochemical cycles with a focus on the ways and extent to which each of them influences and interacts with the global climate system.	3 Credits
	NRSM 415 - Environmental Soil Science Offered spring odd-numbered years Prereq., ENSC 245N or NRSM 210N or consent of instr. A detailed analysis of the physical, chemical and biological properties of soils and how they function, with a focus on soil processes and how they affect, and are affected by human activities. Specific topics include element cycling, water quality, the effects of environmental change soil biogeochemistry, plant-soil interactions, and the consequences of large-scale disturbances on soil processes.	3 Credits

	NRSM 418 - Ecosystem Climatology Interactions between the biosphere and atmosphere to advanced undergraduate students and graduate students. This course will explore the interactions between Earth's biosphere and atmosphere and how they affect climate over a range of scales. We will focus on the exchange of energy, mass, and important elements between the biosphere and atmosphere and how this exchange can lead to fascinating feedbacks in Earth's climate system. Basic physics and math is not required but it is recommended.	3 Credits
	NRSM 455 - Riparian Ecology & Management Offered intermittently. Prereqs., successful completion or concurrent enrollment in NRSM 385 and completion of one of the following introductory ecology courses: BIOE 172, BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462. Importance of riparian/wetland areas and the complexities associated with their management for short and long term benefits.	3 Credits
	NRSM 462 - Rangeland Ecology Offered spring. NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172N or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. We will discuss the ecological principles and processes that drive the structure and function of rangeland ecosystems. We will focus on the intersections of plant, animal, ecosystem, and landscape ecology. We will weave in discussions of management to understand how rangeland dynamics contribute and respond to differing management paradigms.	3 Credits
	PHSX 205N - College Physics I Offered autumn and spring. Prereq., M 122 or 151 or equivalent, and prereq. or coreq. PHSX 206N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the lecture portion of medical school requirements in general physics. Credit not allowed for both PHSX 205N-207N and 215N-217N.	4 Credits
	PHSX 206N - College Physics I Laboratory Offered autumn and spring. Prereq. or coreq., PHSX 205N. Mechanics, sound, and heat. For non-physical science majors. This course satisfies the laboratory portion of medical school requirements in general physics. Credit not allowed for both PHSX 206N-208N and 216N-218N.	1 Credits
	STAT 216 - Introduction to Statistics Offered autumn and spring. Prereq., M 115 (preferred), or one of M 121, 132, 151, 162 or 171, or ALEKS placement >= 4. Introduction to major ideas of statistical inference. Emphasis is on statistical reasoning and uses of statistics.	4 Credits
	WILD 275 - Wildlife Conservation Offered spring. Prereq., sophomore standing or consent of instr. Principles of animal ecology and framework of wildlife administration as a basis for the conservation of wild birds and animals, and biodiversity. Intended for non-wildlife biology majors.	2 Credits
Minimum Required Grade: C-		94 Total Credits Required

Writing

Rule: Must take both lower-division courses (WRIT 101 and NRSM 200) and at least 3 courses at the upper-division level listed below

Note: The following courses count for the entire upper-division writing requirement (only one course is required): PTRM 451W Tourism and Sustainability, PTRM 482W Wilderness and Protected Area Mgmt.

	Course	Credits
	BIOE 428 - Freshwater Ecology Offered spring. Prereq., BIOB 160N and either CHMY 123N or 143N. Physical and chemical dynamics of lakes and streams. Diversity, distribution and dynamics of freshwater organisms.	5 Credits
	FORS 330 - Forest Ecology Offered autumn and spring. Prereq., FORS 210 or ENSC 245N or NRSM 210N; and BIOO 105N or BIOB 170N or BIOE 172 or BIOB 160N or FORS 240; and FORS 201 or STAT 216 or SOCI 202 or WILD 240 or PSYX 222. Examination of physical and biological factors affecting forest structure, composition, and function, including biodiversity, disturbance, and nutrient cycling. Field labs throughout Northern Rockies including developing skills in field observation, data interpretation and problem solving.	3 Credits
	FORS 341 - Timber Harvesting & Roads Offered spring. Prereq., NRSM 200 or WRIT 222. An overview of harvesting system capabilities and selection for multiple resource objectives. Fundamentals of forest road management. Best management practices as they apply to forest operations in Montana and the western United States.	3 Credits
	FORS 342 - Wood Anatomy, Properties, & ID Offered spring. Prereq., BIOO 105N or FORS 240 or FORS 241N. Lecture and laboratory investigation of the structure, identification and physical and mechanical properties of the commercial tree species of North America.	3 Credits
	FORS 347 - Multiple Resource Silviculture Offered spring. Prereq., FORS 330 or BIOE 370. Credit not allowed for both FORS 347 and 349. An introduction to the concepts and application of silvicultural techniques to forest ecosystems to meet multiple resource objectives.	3 Credits
	FORS 349 - Practice of Silviculture Offered autumn. Prereq., FORS 202 or FORS 302 and FORS 241N and either prereq or coreq FORS 330. Practice of Silviculture is designed primarily for Forestry majors (open to others with appropriate prerequisites), and will consider the conceptual foundations behind various silvicultural practices and techniques, as well as and their application in forest ecosystems to meet multiple resource objectives. The course will cover natural stand dynamics, stand assessment and site classification schemes, even- and uneven-aged silvicultural systems, thinning/stand density concepts, regeneration practices, stand diagnosis and prescription development, vegetative management strategies for diverse objectives, along with quantitative assessment and modeling of alternative prescriptions.	3 Credits
	FORS 440 - Forest Stand Management Offered autumn. Prereq., FORS 202 or 302; FORS 341; FORS 347 or 349. The management and manipulation of forest stands to reach multiple objectives, with a focus on the planning of forest operations for a community partner.	3 Credits

	FORS 499 - Senior Thesis Offered autumn and spring. Prereq., senior standing and consent of instr. Preparation of a major paper based on study or research in a field selected according to the needs and objectives of the student.	1 To 3 Credits
	NASX 403 - Contmp Tribal Resource Issues Offered intermittently. Acquaints students with contemporary tribal resource management and environmental policies.	3 Credits
	NRSM 200 - Nat.Resource Professional Wrtg Offered fall and spring to College of Forestry and Conservation majors. Prereq., WRIT 101. Students synthesize scientific literature and, using appropriate evidence and APA style, write natural-resources-based documents appropriate for distribution to scientists, managers, and the public.	3 Credits
	NRSM 379 - Collab in Nat Res Decisions Offered autumn. Political and social processes affecting natural resource decisions. Examination of cases of multi-party collaboration in forestry, range, and watershed management issues.	3 Credits
	NRSM 444 - Ecological RestorationCapstone Offered spring. Prereq., junior or senior standing in Wildland Restoration and successful completion of NRSM 265 and one advanced ecology course: BIOE 370, BIOE 428, BIOE 447, BIOE 448, FORS 330, or NRSM 462; and completion or concurrent enrollment in NRSM 365. This service-learning course teaches students about designing and implementing restoration and monitoring projects. The course includes lectures, labs, and hands-on experience working with ecologists and restoration practitioners from local government agencies, NGOs, or other organizations.	5 Credits
